Does anyone have the frequencies for the California State Fair? I would like to listen to the State Fair Police and other fair radio traffic. If anyone can help please post or e.mail, thanks in advance.

I worked at a PSAP that served over a million people and for five
years was the ONLY licensed ham operator on staff. Again, how do you
make sure that your PSAP has licensed ham operators on duty 24/7?

>Most communities now have a communications center like this. Please
>see http://www.apcointl.org or http://www.nena.org for information
>about public safety communications. After 17 years as an EMT, then

I've been involved in public safety communications for about 20 years,
and was a member of APCO for a time. I do know what's going on out
there, but relating stuff that happens in progressive locations like
California to my own community is quite a stretch.

>>Why not just have the ham club put up
>>a repeater with an autopatch on it?
>
>Because I, or any other ham, as an itenerant user would not have
>normal access to the patch. We go back to depending on a select few
to
>bring up the patch or act as intermediaries in gathering info. This
is

Or we can mandate, through appropriate regulatory changes, that
repeaters with 9-1-1 autopatches be available 24/7, carrier squelched,
with no special access code beyond the numbers 9-1-1. This does not
mean that we require all repeaters to have them, just that any club or
individual who wants to put up a 9-1-1 connection make it available to
all.

>Next, the patch may time out before the public safety dispatcher has
>an opportunity to receive complete information or while the
dispatcher
>is instructing the amateur caller on lifesaving procedures (emergency
>medical dispatch pre-arrival instructions).

Now YOU may be the one who is surprised to know what is available out there. The autopatches with which I am familiar (RC-850) allow programming of variable timeouts for different types of phone patches. This technology was implemented in my area at least 10 years ago.

>We now can make the caller the FIRST RESPONDER if they are physically
>able and willing to follow simple instructions even if they don't
know
>CPR or first aid. More people are surviving as a result of this where
>they would have died without intervention.

I understand EMD, but don't think it really applies to the typical passing motorist situation. You'd be crazy to give prearrival instructions to someone at the scene of an MVA (or a shooting) who may not have the equipment or capabilities to deal with the larger situation safely. And EMD can be done through a ham autopatch if appropriate.

>Direct communications with a trained public safety telecommunicator/
>dispatcher at a PSAP - ONLY for the purposes of reporting an
emergency
>- is a much better way to go. I believe it would be a tremendous
>increase in the value of amateur radio on the whole (and may save a
>few lives). Maybe something to try on an evaluation basis?!

We had that years ago here in Monroe County, when there was a box on the console at Radio Center and when several of their personnel were hams. Then the City and County merged their dispatch operations, and the box went away. The radio club upgraded to an emergency autopatch on the repeater.

>I have submitted a draft PRM for such possible operation to the
League

>you. Should be interesting. I admit this idea is not a conventional
>solution as we have seen in the past. It requires a little thinking
>outside of the box to see the potential.

I would be interested in the proposal. I'm sure it can be explained better in that format. I know how difficult it is to formulate and explain complex ideas and fully develop an argument in a newsgroup, and on that basis apologize if my response to your suggestion is overly critical.

>
>FOOL, you are full of shit! You don't have a clue!

Nope, sorry, YOU are the one without a clue. What do you think those people on cellphones are talking to? Yup, other folks on regular landline telephones. Without a connection to the Public Switched Telephone Network, cellphones are useless. That's the way it is, by technology and by law (cellphones cannot be used in a "dispatch" or "two-way" operation - all connections have to include the landline system).

And don't confuse cellphones with NexTel. Even when used as a phone, the other party must have a working phone line or the call won't go through.

>
> Questions:
>
> 1. Will I be able to use a glass mount antenna through double paned glass?

I doubt that an automotive type glass mount antenna will work on double paned glass. There are glass testers that can be had for about $35 or so specifically to determine whether glass is appropriate for a glass mount antenna. There are designed for automotive type installations where some glass will not work.

Another option you may want to consider. I have seen some low profile, decal type antennas that use stripline type technology that adhere to the inside of the car glass. I have seen these for 2 meter and 440 Mhz ham. I would feel certain there are some that could be had for cell phones. If not, the 440 Mhz decal antenna, might capture enough signal to work.

These things are very low profile and can just barely be seen. I don't know how effective they are. I would imagine there is some signal loss as far as the transmitter is concerned, but in your application, there may be enough capture area to overcome the signal loss you are experiencing in your building.

Andy

I think at least some if not all of your problem is your feeline.

You didn't mention what frequency you are listening to, but as a general rule, I don't like using more than 20 feet of RG58. Anything longer than that, I try to go to an RG8 type coax.

To give you an example, if you are listening to the UHF band, RG58 coax has a loss of 10db per 100 feet. You are using 50 feet so that is 5db of loss. 3db is cutting your signal strength in half and 6db is cutting it by 4. If you are trying to listen to signals in the 800Mhz range, your losses will be even worse.....MUCH worse.

RG8 coax on the other hand, has about 4 db of loss per 100 ft at 400 Mhz. That would mean if you changed your present coax to RG8, you would go from 5db loss to 2 db of loss or a gain of 3db....translated, that would mean you would effectively double your sensitivity.

> with these devices so the stick with the tried and true x and K band
> microwave devices that give cops cancer!

There have been allegations to this, but nothing has ever been proven. A study performed by the Institute of Police Technology and Management a few years ago found that for police radar devices to attain an exposure level that is equal to the maximum permissable exposure level as established by the American National Standards Institute, there needed to be 69 radar units turned on at the same time nearly touching the skin. Bear in mind that the ANSI level of exposure is 1/10th the level deemed to produce potential health effects.

Kustom Signal Inc., a major manufacturer of police radar devices has NEVER lost a radar exposure case and WILL NOT settle these cases, regardless of costs.

I have not heard of any new pending litigation along this line in many years.

You need to use the right atennas for the freqs you are trying to
get...another words, that bullet duck (less than two inches) is not
tuned for CB. Hook it to a CB antenna!
I have a CUB and I does one hell of a job....the SCOUT is 2 times better
than mine. I suspect that you are just using the little rubber duck to
try to get all kinds of frequencies. Please go to my page to see the
results I get with my CUB.
http://www.qsl.net/kd4lyp/opto.htm

Hope this helps.

MICROSOFT OUTLOOK EXPRESS

KNOWN ISSUES IN THIS RELEASE

TROUBLESHOOTING

TIPS AND TRICKS

SUPPORT FOR MICROSOFT OUTLOOK EXPRESS

MICROSOFT OUTLOOK EXPRESS
==========

Outlook Express Mail is an Internet standards based e-mail and news reader.

To read e-mail with Outlook Express, you must be using a mail system that uses SMTP and POP3 or IMAP protocols. At this time, you cannot use Microsoft Outlook Express to access your e-mail account with any of the following services: MS Mail, cc:Mail, CompuServe, America Online (AOL), or Microsoft Exchange Server prior to version 5. If you don't know whether your system uses these services, contact your administrator or your Internet service provider and ask if they support SMTP/POP3 or IMAP mail clients.

You can also use Microsoft Outlook Express News to read bulletin-board discussion groups, such as the Usenet, using NNTP-based news servers. Contact your Internet service provider or network administrator for the name of the news server that you should use. Outlook Express News can also be used to receive support for a variety of Microsoft products on the news server msnews.microsoft.com.

KNOWN ISSUES IN THIS RELEASE
==========

- When receiving a message using a GeoCities mail account, you might be unable to view any of the original message, or you may see only the following information: Postage Paid by... [graphic].

- You will not be able to see embedded objects or images sent from people using Microsoft Outlook, Microsoft Exchange, or Windows Messaging. File attachments work fine, however.

- If you use HTML in your signature, and you send the message before any included images have finished drawing, the text you add to the message may be lost.

- Some mail clients send Cyrillic messages with tags indicating that they are in a western European character set. As a result, Outlook Express uses a western-European font to display the message, which then appears garbled. To work around this problem, click the View menu, click Language, and then choose a Russian character set, such as K0I8. The message should display properly using the Russian font.

- Inbox rules are not available for IMAP accounts.

- If you are using Outlook Express with a SUN Solstice, Netscape, or Innosoft IMAP server, it may cause your server to stop responding. Please contact the 3rd party provider for an update to the IMAP

server software to correct this problem.

- Outlook Express S/MIME does not verify the status of digital IDs
before sending encrypted or signed messages. This means that a
digital ID that is revoked, expired, not trusted or that has an
incorrect e-mail address will be used without providing any warning.

- To send signed messages and receive encrypted messages, you must
have a digital ID. Currently, the only way to get a digital ID
for use with Outlook Express is to use Internet Explorer 4.0 and
go to the Verisign Web site, http://digitalid.verisign.com.

- While sending and retrieving messages, closing Outlook Express and
restarting it will cause Outlook Express to crash.

- In Outlook Express News, if the option "Get 300 headers at a time" is
turned on, the following commands: Get New Headers, Get New Messages,
Get All Messages, and Get Marked Messages will retrieve only 300 (or
the number that you specify) headers at a time. To prevent this, you
should turn off this option.

- To cancel a news message, you must be using the same message encoding
options as was used for the original message.

- If no folders are displayed for your IMAP server or if you want
to refresh the list of IMAP folders you need to download the folder
list from the server. To do this, select the IMAP server. If you
connect to the server by using a modem, click the Tools menu, and
then select Offline > Dial. If you connect to the IMAP server by
using a LAN, you can skip this step. After you have connected to
the server, click the File menu, click Folders, and then click
Refresh Folder List.

- If you need to change any of the following settings for your IMAP
account:

. IMAP server name or port number
. Account type (POP3 or IMAP)
. Any logon information

it is recommended that you delete the IMAP account and create a new
account with the updated settings.

- Outlook Express is designed to work only with IMAP4 compliant
servers. IMAP2bis servers are not supported in this release.

- If you rename a news server account name and then attempt to
perform some action on it, for example copying messages from the
server, you may receive an error message. To work around this
problem, close OE and restart after the renaming of a server.

- If encrypting a message when there is not a certificate for one of
the recipients, an error will display stating that there is not
a certificate for that recipient as well as the sender.

- Certificates are now handled on a per account basis. You must reselect which certificate to use for each account from the Accounts menu. Select the account you want to configure for security features and check the box to use a certificate when sending secure messages. You must also click the Certificate button to select which to use.

- If you used Internet News for reading newsgroups, any messages in your "Posted Items" folder will be moved into the "Sent Items folder when you upgrade to Outlook Express.

- Outlook Express only shows subscribed IMAP folders in the folder list. It no longer shows all your folders (subscribed and unsubscribed). If you want to see all your folders in the folder list, you should subscribe to all your folders. Click on the "File" menu, then click "Folder >" and select "Subscribe All Folders" menu. If there are folders that you don't want to displayed in the folder list, you can unsubscribe the folder. Click on the File menu, click on Folder >, and select "Unsubscribe Folder".

- If you send a Rich Text (HTML) message which contains embedded pictures and the option to "Send pictures with message" is turned off, any pictures from a local computer or LAN will not be viewed when receiving and reading the message using Netscape's Messenger.

Note to French users

In order to comply with the French laws on the use of encryption material, S/MIME support in Outlook Express has been disabled when used in France. However, SSL 2.0 and SSL 3.0 support is authorized, and hence left enabled.

TROUBLESHOOTING
===

- If you run into a problem, try the troubleshooter in online Help or on the Microsoft Web site at http://www.microsoft.com/support/tshooters.htm. To start the online Help troubleshooters, carry out the following steps:

1. In Outlook Express, click the Help menu, and then click Help Topics.
2. Double-click the "Troubleshooting" topic on the Contents tab.

- Check your connection to your Internet service provider.

- If you are unable to send or receive mail, check the following:

- The TCP/IP protocol is installed on your computer.
- All cables are properly connected to your computer, modem, or LAN.
- You have a PPP or SLIP account with your Internet service provider.
- Your Internet service provider or LAN server supports POP3 or IMAP and SMTP.

- Your modem communication parameters (baud rate and type of protocol) are set correctly.

- Make sure that you use an account name and password for a news server only if it requires them. If you use an account name and password and they are not required, you will not be able to connect to the news server.

- To access the Microsoft peer product support newsgroups, carry out the following steps:

1. Click the Tools menu, and then click Accounts.
2. Click Add, and then click News on the drop-down menu.
3. Follow the directions on your screen.
4. When you are prompted for a server name, type msnews.microsoft.com

If that name isn't found by your Internet service provider, you can type 131.107.3.27 instead.

You do not need to log on to this news server.

TIPS AND TRICKS
==========

- You can change the sound that notifies you that you have received new mail. To do this, double-click the Sounds icon in Control Panel, and select New Mail Notification from the events list.

- Use the Check Names command, available on the Tools menu or on the New Message toolbar, to look up a person's e-mail address when sending mail. The name will be underlined when the associated address is found.

- You can move the toolbar to a different edge of your screen by right-clicking it and then choosing Left, Right, Bottom, or Top from the Align menu.

- To send a mail message in Plain Text only (no HTML formatting), click the Format menu, and then click on Plain Text. To make Plain Text the default setting for new messages, replies, and forwarded messages, click the Tools menu, click Options, click the Send tab, and then select Plain Text under Mail sending format. (News messages are sent in Plain Text by default, but similarly, this setting can be changed under News sending format.)

- To customize the toolbar, right-click it, and use the menu commands to perform the desired actions.

- You can resize the preview pane or the message list by dragging the divider between the preview pane and the message list.

- You can change how the preview pane splits, or turn it off entirely, by clicking the View menu, clicking Layout and changing the options

in the dialog box.

- You can specify that you want to see only unread news messages. To do this, click a newsgroup, click the View menu, click Current View, and then click Unread Messages.

- You can set messages to automatically download to the preview pane by clicking the Tools menu, clicking Options, clicking the Read tab, then selecting the Automatically Show Messages in the Preview Pane check box.

- To view the e-mail address of someone who has sent you a message, double-click the message to open it, then double-click the author's name in the From field. You can also add this person to your Address Book by right-clicking the name, and then clicking Add To Address Book.

- To view responses to a particular message in a newsgroup, click the plus sign (+) next to the message. The responses appear indented below it.

- In mail, you can leave a copy of your messages on the server. To set this option, click the Tools menu, and then click Accounts. Select the mail account you want to modify, and then click Properties. Click the Advanced tab, and then select the Leave A Copy Of Messages On Server check box.

- You can search for newsgroups that contain specific words in their names. To do this:

1. Click the Tools menu, and then click Newsgroups.
2. In the Search box, enter the words separated by a space.

You can also search newsgroup descriptions. If you cannot see the descriptions, click the Tools menu, and then click Accounts. Select the news account you want to modify, click Properties, and then click the Advanced tab. Next, select the Use Newsgroup Descriptions check box.• Click the Tools menu, and then click Newsgroups.• In the Newsgroups window, click "Reset List."

- You can have your signature added to all messages, including those that you reply to or forward. To do this, click the Tools menu, and then click Stationery. On the Mail or News tab, select the following check box: Add Signature To The End Of All Outgoing messages.

- It is possible to use HTML files as signatures as well as plain text files.

- To reorder columns, you can drag and drop column headings. Columns can be resized by dragging the right edge of the column header.

- You can view all the headers for a news message. To do this, double-click the message to open it in a separate window, click the View menu, and then click Full Headers.

- If you are running Outlook Express on Windows NT and you need to add support for a different language, double-click the Keyboard icon in Control Panel, and then click Add. Follow the instructions on your screen. This installs the appropriate NLS (National Language Support) files. You do not have to use the associated keyboard layout.

SUPPORT FOR MICROSOFT OUTLOOK EXPRESS
==========

For the latest information about Outlook Express as well as a list of Frequently Asked Questions, see our Web page at http://www.microsoft.com/ie/ie40/collab/imn. You may find that your questions can be answered here.

A newsgroup is dedicated to the discussion of Microsoft Outlook Express and provides peer support:

- news://msnews.microsoft.com/microsoft.public.inetexplorer.ie4.OutlookExpress

To read it, follow the procedure outlined in the Troubleshooting section above.

This site is the best place to go if you are experiencing a problem, as someone else who experienced the same problem might already have posted the solution.

I went to the local Radio Shack here today and bought 2 small items which only came to $7 plus change. After paying for them I noticed the new catalogs and asked for 1. All the clerk did was scan it in and give it to me. NO charge I suspect that if you purchase something even a few $ they will still give away the catalogs free. We all know it costs to print those and some people would take 10 of them if they had a chance. I am not a big RS fan but I do buy a few things there.

That doesn't happen very often, fortunately. Most of the time when the
crossband patch is down, its usually something wrong with the machine.
Believe it or not, there are places around Phoenix that a police car on vhf
cannot transmit out of.

If anyone wants some of the local frequencies, I can send along a text file...

Eric.

I think it's a rediculous idea that one has to pay for advertisement at all.
RS is most certainly no charity, it's a business that makes money of their
advertisement. We don't have to have any pity with RS that it costs them
money to print the catalogs, they sure earn it back. If this type of
advertisement would not be cost effective to them then they would not have
catalogs. I guess it's as with many things that we've become to accept these
things and think it's normal. It's like telemarketers who call collect, I
guess one day we'll think that's normal too. If they would use the money to
plant trees that had to come down to make the catalog, then I would be
willing to pay.

> I am not a big RS fan but
> I do buy a few things there.

Same here. I bought a cassete player a couple of weeks ago at RS. The thing
costed $19.95 and this girl tried to sell me a waranty for $19.99. She did not
seem to understand that it was a bad deal and kept trying to sell me the
waranty.

Did you ever think maybe he got tired of all the back stabbing and
stuff? He has an account to get in here and read the groups but maybe
has decided not to do so, funny how it took makey so long after Bill
was gone to stop the crap, which has not happened yet, or at least
totally. And yes how many people out here have used his info on
modifying there scanners?
I think everyone on here whether they Like him or not should
start sending e-mail off to ekruse@san.rr.com to give BIll his account
back, he has done the scanner hobby more good than anyone on this
group. What are you going to do when mackey decides he doesn't like
what you are saying on here and starts in on you? SUre no problem
just ignore him? Eventually he will get you mad enough that you will
respond and then it will be him and you and then he will start
complaining to your ISP that you are picking on him, and then before
you know it you have lost your account.

I don't know what mackeys problem is and I don't care but
having sent enough shit to BIlls ISP to have them take away his
account was not right!
I know this war has gone on too long but this is ridiculous.

LETS GET BILL BACK!!!!!!!!!!!!!!!!

Len, CW is in NO WAY Morse Code.

As someone else stated, CW is a METHOD of transmitting Morse Code. "Morse Code" is the actual "encoding" of alphanumeric characters into short and long tones.

Hi KarL:
This is exactly what I stated:
If, in the circumstance of the "saving" of a human life,
you may operate in any manor consistant with the
"reasonable" and "Operationaly consistant"
considerations of "any" service. No single operator, following
this guideline, has been prosecuted.
HEY!!!!!
We are the good guys!. The FCC recognizes this. Local agencies
recognize this. All they ask, is that we don't get carried away!
(And I don't know of a single case in the last 20+ yrs that this has
happend)

Ok, I was nodding my head in agreement until we got here. A keyed pure
tone into a SSB transmitter *is* CW. The rules specify the characteristics
of the emission, not the circuit configuration of the radio. When configured
as above, you've just got a hetrodyne CW transmitter.

A good point being to always check before you enter a state. A good source of information is the states entry point. You know the one, it's got all the truck traffic backed up. A state may allow you to carry scanners and radar detectors perminatly mounted in a vehicle. However some counties and cities will not allow it. California for example allows it, however the city of Los Angeles does not. When you go to an airshow at a military base radar detectors are strictly forbiden. Not that they pay any attention, but thats gee wiz info.

The work around is simple. Mount the detector under the hood, dead center. Just behind the grill works great. Run a LED to the dash and label it "Security System". A nice looking switch to turn it off and on can also be installed. My car has a built in LED labeled "Security" just above the speedo. This works great and it would take a cop many hours and a good inspection to find it. I wired the power switch to the crusie control switch.

My ham radio unit works great for covering up the fact that I am scanning. During a "pull over" I simply hit the VFO button and key lock switches. The radio is now locked to a ham frequency. Switching the unit off while the cop walks up to the car helps as well. Draw no attention to the fact you are scanning. The officer really only has one thing on his mind. Is this person going to kill me. Your speeding violation is a secondary thought.

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.
You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to give it a try, you can download the
program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

>you out.

It does not matter how many people hear you. If you are talking to
one person, everyone else will assume it is being dealt with.

If you want to test the reliability of people to help you when you
are in trouble, try putting your head out of a window and start
screaming. You can expect to be completely ignored, and if
not you will be told to shut up and stop making so much noise.

>This goes for a repeater autopatch, just the same.

>A cell phone, however, is much different, as only the party you're calling
>and a few people with illegally modified scanners can hear you.

With a cell phone you will choose who you talk to, and make the
call count. Most people can remember 911 or whatever.

I suppose if the government really wanted to, it could put radar transmitters all over the place so whenever you were on the road you detector would be chirping like crazy, thus rendering it useless.

Or the government could mandate that speed limit signs carry transmitters that would send signals to your car's computer preventing your car from going faster than the limit on the sign. This could easily be sold to the public on the basis of protecting our children etc.

There is a lot they can do and eventually they will get around to it all. Just hide and watch.

>RS is most certainly no charity, it's a business that makes money of their
>advertisement.

Advertisement? Those catalogs are produced for the benefit of the
salespeople. It is a reference guide and a training tool. RadioShack is kind
enough to provide them to customers that also find them helpful.

>We don't have to have any pity with RS that it costs them
>money to print the catalogs, they sure earn it back. If this type of
>advertisement would not be cost effective to them then they would not have
>catalogs.

The monthly mailout that is targeted to customers who volunteer their names
and addresses are significantly more effective advertising than the catalog.
A few years back the elimination of the RadioShack catalog was discussed.
Instead someone thought of the idea of selling the catalog on newstands (I
noticed that they were for sale at Wal-Mart). This is when RadioShack
started selling the catalog. The first year the catalog had coupons in it to
compensate for the customer's investment. The first year (four years ago)
was the only year that RadioShack charged for the catalog at the RadioShack
store. After that they have a policy that the exchange of name and address
information for the mailing list was a fair price for the catalog.

>I guess it's as with many things that we've become to accept these
>things and think it's normal. It's like telemarketers who call collect, I
>guess one day we'll think that's normal too. If they would use the money to
>plant trees that had to come down to make the catalog, then I would be
>willing to pay.

Use what money to plant trees? The money that they earn from the sale of the
catalogs? They don't make any money directly from the sale of catalogs. In
fact the costs of the catalog are a lot greater than the profits made from
selling them even if everyone produced were purchased. If you are concerned
for our environment then take your old NiCd batteries to them to be
recycled.

Do you like jail? Thats where you will end up if they catch you transmitting on a public service band like the police. We have seen a bit of this in Houston at times. But doesn't last very long. If you feel the need to contact the police that strongly I suggest a cell phone. I know a guy that is a future police officer that passed the police acadamy etc. He got caught with a police radio in his car. He DID NOT USE IT. He just happened to have one that would operate police freqs with a ham mod in it. He did not pass go or collect 200$. He went to jail. And I don't think he deserved it at all, but thats another story. The bottom line is the police take a very dim view of jamming or using their frequencies. If you get caught with a radio that can access police frequencies expect to go to jail. For a while anyway. MK

JAIL just for having it, NOT not even in texas
there is more to this story than meets the eyes
YOU CAN LISTEN TO ANYTHING YOU WANT
you just cannot transmitt on a lot of them UNLESS your authorized
the only exception i know to this is some cell frequencies
don

I'm so glad I don't live in a condo or gated community with a homeowners association. They would have a fit with the antenna farm on my roof. That antenna farm is one thing I'm not giving up. My neighbors don't mind it, as they come over to ask me what's going on everytime a firetruck or police car shows up in the neighborhood.

Good luck ...

Mike

Hy> Actually there was a fellow who used a police radio to call for help
Hy> when an officer was down.

But he used a radio that was type accepted and licensed to the police.
That is not the same as using a ham or other radio while transmitting
out of band on a police frequency. Big difference there.

>Incorrect. CW/Morse code was used as early as the mid-1800's.

Morse Code was indeed used in the mid 1800's, but CW was not. Morse Code was used on the landline telegraph system, though a slightly different version than the International Morse Code used in Amateur Radio was used. There was no radio as we know it, and certainly no CW, nor even Spark (damped wave) transmissions. CW and Morse Code are NOT the same thing. You must have an oscillator and some means of radiating the signal therefrom in order to have CW. Samuel F. B. Morse invented Morse Code... he did NOT EVEN DREAM of CW. The landline telegraph was technical achievement enough for that day and age.

Discounting a few other experimenters with prior claims generally unrecognized today as being "real" radio, Guglielmo Marconi sent the first Spark transmissions of practical communications value in 1895. This was Damped Wave, or Spark, and not CW. CW was not practical until the invention of the Audion, or Triode, by DeForest in 1906 and not in general use until a few years later.

Mid 1800's? Maxwell did not even publish the theoretical work until 1873. The coherer was invented by David Edward Hughes in 1879. Around 1888, Heinrich Hertz started playing around with his spark gap generator. There was still no real communication, since the only way to detect at a distance the presence of radio waves was through use of the coherer, which only indicates when a transmission begins, not when it stops. An improved coherer was invented by Marconi in 1895, along with a recognizable antenna/ground system, an improved spark oscillator, and a couple of other wrinkles that enabled the first Morse Code transmission and reception via radio over any practical distance in the same year. In 1897 he transmitted from shore to a ship 18 miles distant. in 1899, the FIRST commercial radiocommunication link was established, between England and France. This was STILL not CW. In 1901, radio came of age with the first verified transatlantic communication, with regular two way traffic beginning the next year. STILL not CW. CW did not come about until around 1907 but I am not sure of the exact year... but the triode, initially used as a receiving amplifier, did not come about until 1906 anyway.

There was no CW in the mid 1800's... not even science fiction yet. There was Morse Code landline telegraphy, but no radio and certainly no CW.

No, it is incorrect -- amateur operators are allowed to transmit OUT OF
THEIR PRIVILEGED bands, however NOT out of the amateur bands entirely.

In other words, no, you cannot transmit on any frequency in a dire
emergency, OTHER than any amateur frequency.

I've re-read 97.403 and it's context, and it does clearly state what I've
said above. Try the "FCC Rule Book", as it shows the same.

Incorrect, Dennis. I've re-read 97.403 (and context) and I've re-read a section in the FCC Rule Book, and it clearly states that no transceivers that are not licensed and not type-accepted for a specific band may be used AT ANY TIME for ANY REASON.

This does mean, however, that you may transmit on ANY AMATEUR frequency -- just not out-of-band.

Grounding it would help some (the outer coax shield), and also make sure the antenna is not horizontally polarized near power lines.

Also, I wouldn't have used RG-58. RG-8, RG-11, RG-6, or RG-213 would be much better.

I'll mention mine too: The only three times I have ever been in a situation where emergency assistance was needed, amateur radio FAILED MISERABLY! A cell phone call saved the day. Some old coots on a 2M repeater wanted to dicker with me when I asked for someone to call the police.

In fact, there is no longer any superstition in my mind that amateur radio is relevant any more in this day of satellite transponders and cell towers. A cell phone is a far better investment in emergencies than any ham rig could ever be.

I see in the Radio Shack 1999 catalog, a mobile trunking scanner that's the size of a standard AM/FM car radio. PRO-2066 for $219.99

This is the scanner, I've been hoping that they would make someday.

I didn't see a disclaimer in the catalog about Motorola trunking only.

It's so new, a WEB/USENET search didn't turn up much of anything.

Does anyone know if this is made by Uniden? and if so, then Uniden's part #?
Also does any mailorder companies sell this scanner?

Usually the OPP helicopters (2 of them based out of General Headquarters
in Orillia) operate on SIM-01 (140.9700). So, you could only hear them
if they are close by. They could also be on provincial common (142.7700)
if they are working with another agency. They don't operate on the tower
frequencies (dispatch frequencies) because they would hit too many towers
and end up repeating across half the province.

As for what they were doing, probably searching for marijuana fields
(they were doing that in York Region recently) or maybe a search and
rescue job.

>
>
>as an aside....the ministry of health lifeflight chopper freqs would be
appreciated as well
>
>
>d

MOH helicopters operate on 413.6875. They usually call ground ambulances
on provincial (150.1000). The helicopter based in Toronto is known as
"799".

Thanks to everyone for all the info.

I actually had already ordered the Phazer before I posted the question so I guess I will just have to find out the hard way.

I will be driving from Pennsylvania to Texas in October - and have driven this route probably 10 times in the last couple of years. I have a radar detector and a portable CB which I take with me but I have a new car and wanted a bit more protection - hence the jammer.

I will use the washers on the front license plate (actually PA does not have a front license plate - but it has a plate on it showing where I bought the car). I'll check the car for other flat surfaces but it is fairly streamlined
('98 Saab).

Anyway, thanks to everyone for the posts and the e-mails.

Jerry

Satellite TV (C Band TVRO) downlinks are up around 3.7GHz to 4.2GHz, and (Ku band) 11.7GHz to 12.2GHz. I don't think your scanner could pick this up, and even if it could, you'd need to amplify the signal by about 100,000 (i.e. need a dish and proper LNB) and possibly be able to decode the signal if it's sent digitally or encoded, which would require a receiver as well, defeating the purpose of using a scanner altogether.

There are, however, some tricks you can perform with an existing satellite receiver /dish setup and your scanner. I don't recall exactly where I read it, but you can connect your scanner to the TV output of the satellite receiver and somewhere on 70-80MHz you can hear certain satellite audio stations on the scanner itself. (if I remember correctly, these stations are not available to the existing satellite receiver system) Try doing a search on Scanner Tricks over at Yahoo.. I think it was on one of those pages. There's lots of neat stuff out there!

The only difference is that when using an amateur rig, anyone with a scanner or another rig can hear your emergency. It doesn't matter if who you're talking "dickers" with ya, because someone else listening could just help you out.

This goes for a repeater autopatch, just the same.

A cell phone, however, is much different, as only the party you're calling and a few people with illegally modified scanners can hear you.

Just my $0.02

Babalooey! So a person travelling through each state would have
to purchase or get hold of a book of laws,
sit down and read the the entire book before proceeding to the
next state,
and then do the same in the next one,
and the next?

That's nuts. Do American tourist bureaus send out "driving
books" to those who ask in advance, or is there some kind of
national "driver's" book they could purchase somewhere? It's
easy to say "ignorance of the law is no excuse." but when a
tourist has to locate a licensing office or police station to
find a book, and then pull over to the side of the road to read
it before proceeding....
Besides, he could be fined on the way, so what other options does
he have?

It;'s easy for you when you come to Canada. We've only got 10
provinces here and our laws are pretty well the same in nine .
But you've got a lot more states and, in spite of the fact that
you don't have more than one official language to create barriers
between people, your laws still differ "much" more than ours.

Ok, be REASONABLE here. Tell me seriously what judges and LEOs
would expect tourists to do to ensure they didn't get a ticket.

Don't give me the "stay home Canuk" answer. I want a "serious"
answer here. -- Alleycat

That is POCSAG 1200 & 2400 baud intermixed, I'll bet it's an image
from some 900mhz paging system., but that's just a guess, download one
of the pocsag decoder programs and run it through.

You can listen to some .WAV samples on my website (url below) and find
plans for a simple interface to decode it, unless you want to try the
soundcard method..in that case do a search for poc32. I'll provide you
with more detailed help if you need it.

On my computer at home, I NEVER post under ANY name except "Ryan Faricy KC0DSZ", jtonsa [at] nospam [dot] atandt [dot] net.

There have been a few mishaps where my dad's name appeared (such as this morning), as I am using his AT&T account, which can be automatically set up on-line, and that auto setup program inserts his name.

The reason I was posting under "The Faricys" this morning is because I was at my grandparents most of the day (...setting up AT&T was one thing), and they have many users who will use the computer.

I am evaluating an opto scout Model 40.

What are the expectations for this unit - realistically?

When I put the unit onto the the front car dashboardI only get 1 or 2 hits per trip although I can see truckers talking into their CB and people using cell phone nearby in the next car - but no hits. I do get hits inside our mall from security guards sometimes. My local police transmit on a 75 foot tower nearby and I get some accurate frequency captures and other captures that are "off" but somewhat close. I went to a fire scene and was unable to pick up the firefighters at 200 feet back.

What kind of results are some of you getting?

What are the rules for getting acceptable results?

Does using opto's extra antennas get me better performance ? Have you noticed better performance with them? (im using the short 440 antenna and other duckies I have around)

It seems like you may have to get up really close next to someone to get a lock with lower power trasmitters and maybe 100 feet with 5 watt units. I was 20 feet away from a McDonalds order taker and could not get a pickup. The unit seems to work - but certainlynot like you would like it to.

Any filters or pre-amps work best for you ?

Any tricks that work?

I may try to setup a definitive test with my unit by using several of my own transmitters and setup a radius test at different power settings.

Thanks for your Insights and experiences

You may reply via e-mail if you prefer

I used to be a customer, bought four times from you. The last time I tried to buy a product, you or your staff said the product was in stock, it was not. Then your staff later called back and said my credit card information did not match what "you" had on file. Sorry I changed my address, I gave you the correct one, and had you verified it, would have found that so, but your staff could not or would not understand that fact. So I bought my radio from another company.

They will have my business first next time due to poor customer service.

Not to mention the fact you stand a greater chance of getting wasted by
someone who is DUI or DWI while directing traffic.
Here in GA. we have had a number of officers and one school patrol guard
killed or injured directing traffic.
Some of it has even been recorded by video in the patrol unit.

My wife teachs directing traffic as a supervisor for the Cobb County Police
school patrol.
She indicates to her people to always be alert and you never can be too
cautious.
I bet she would love to exchange the chance to get cancer from a radar unit
in a patrol car for standing out in traffic in all kinds of weather.

Yes, I can decode 2400 baud pocsag, almost 95% of the transmissions that
come through.

I never said I had the capability of decoding FLEX. What I said was that
when I played the alleged 2400 baud pocsag and a FLEX signal, they were a
close match!

Thank you for your comments. At Communications Electronics Emergency Operations Center, all unclassified telephone calls are recorded and logged. As you may know, CEI distributes voice logging equipment to police, fire and 9-1-1 agencies as listed on our web site http://www.usascan.com.

For quality assurance purposes, we monitor our calls.
I do not show any record of any CEI employee being rude when answering questions regarding Icom products.
If you called CEI for presales technical information, you would have been referred to ICOM America at 1-800-USA-ICOM for presales technical support information. For your convenience, we list the telephone number of factory technical support for the products we distribute next to the products on our web page.

I do not show any sales agent assigned to your E-mail address "Monitor@kdsi.net". I am interested in knowing who you spoke with at CEI and the day and time you called. Please E-mail me at cei@mediaone.net at your convenience.
If you do have a customer service concern it is helpful if you use your real name and address in your correspondence with our office.
We are a service-intensive company, which is why we take comments like yours very seriously.

I hope you enjoy your Icom R10. It is a popular product.
If I can be of further assistance to you, please call me at 1-800-USA-SCAN.

Thank you for your comments. We checked our shipping records
and do not show any order going to a Hans Gruber over the last
seven years. I think you might have us confused with another
company as CEI does not charge a restocking fee. Please visit
our web site at http://www.usascan.com and click on customer
benefits. You will notice that no restocking charge is one of
many customer benefits provided by CEI.

According to your email, your e-mail address is
bitzn@ai.ac.th in Thailand at the Assumption University of
Thailand. We have stringent customs documentation
and export controls. I do not show any product going
to Thailand or your organization where your E-mail originated.
Therefore, I am interested in your CEI invoice number. Uniden is
also interested in their repair order number. At your
convenience, please E-mail me at cei@mediaone.net with
this information so I can look into this.

Bob, you couldn't be more wrong. Almost EVERY person that has used "any
means" (IE, transmitting out-of-band) has been prosecuted, and they've had
their equipment confiscated.

According to Part 97 (97.40x), IT IS ILLEGAL TO TRANSMIT OUT OF THE AMATEUR
BANDS with a radio that is not type-accepted for a non-amateur band.

>Everyone who keeps citing the laws are pussies who are afaid to key the
>mike. And if you see a woman getting raped and fail to key the mike, you
>are an accessry to the crime. Period.

Very incorrect -- if you see a woman getting raped (which you shouldn't be
watching in the first place), you are most likely near a building, phone, or
another person (all of these constitute a means of communication).

Not keying the mic would not be classified as being an accessory to a crime.
It would mean you have the common sense to seek other help.

>I am dismayed that so many of you make excuses NOT to get involved when

Yes, Loomis and Stubblefield, especially Loomis, were the ones I was thinking of, though their names escaped me at the time I wrote that post. I had forgot about Tesla's experiments.

So to the best of your knowledge, Gary, should you see fit to reply, in what year did the first CW contact take place? And when would you say CW became more than merely a scientific curiosity and a viable means of routine amateur communication?

I am pretty sketchy on the alternator method of generating CW, and had not realized that this was actual CW. I thought the first use of CW followed the inventon of the triode.

Thanks for filling in those gaps.

What we've got here are a few consumers that are cry babies. When a reputable, above board company like CEI provides great customer service you should take advantage of it. If you had a problem and you let it stop with the first person you spoke too....pardon me, but you are part of the problem. Every company in the country should be judged by the worst employee they have. Most service companies are accutely aware of this concept and strive to improve the quality of life for all their employees. By doing this, every employee feels important and strives to uphold the companies corporate philosophy. Let's face it, everybody has a bad day. For you to judge one incident on one day and sum up that companies existence based on this makes you what? An expert on the affairs of all businesses? My God, why don't you tell us about the greatest companies in the world that YOU deal with! That way we will never have a problem.Very few companies have a CEO that will actually respond to consumers or a group such as this, and for this I applaud Ken Ascher and will continue to do business with his company.>Hans Gruber wrote:

If I have a choice between facing possible prosecution and saving a life, I know what I'm gonna do. I think the whole concept of "emergency" is that you HAVE to take extraordinary measures. If you do not HAVE to do so, it is not an emergency anyway, so the whole argument is moot.

>BANDS with a radio that is not type-accepted for a non-amateur band.

It is part of your Technicial exam. If there is a life threatening
emergency, you may transmit whenevery and on what ever band you need
to help. During a life threatening emergency, you may transmit on any
frequency using any transmitter and the FCC won't care. In fact, y

>Very incorrect -- if you see a woman getting raped (which you shouldn't be
>watching in the first place), you are most likely near a building, phone, or
>another person (all of these constitute a means of communication).

If a ham radio is the only means of communications (or for that fact
a commercial tv station) you are supposed to use it to call the
police.

That's right. If you take a look at my page:

http://www.xs4all.nl/~jstuyven/r10

you will find out all details of this modification. It simply takes
two 10k SMD resistors to restore cell freqs.

Buying from Communications Electronics, Inc. can be a BAD BAD BAD experience!! Beware or get burned.

Yes CEI is without a doubt one of the most economical ways to acquire scanners on the internet and probably the cheapest anywhere. They ship promptly, they
have a nice website(professional grade if you ask me) and they carry high demand items. However they have a couple of business practices that make them look like greedy rotten scoundrels. They advertise that if you buy an Uniden BC235XLT you will get free, a nice leather carrying case and a set of
large headphones(I guess by Uniden also), free! Then in the small print they write that there will be an additional charge of $12 for shipping of each of the free items. If you buy the BC235XLT(like I did) please beware because they will screw you and then tell you it was written somewhere on their
website. Shipping for the scanner is going to be $18 plus the price of the scanner plus $24 for the headphones and the case. The worse part is that these additional free items are of the lowest quality. The headphones wont stay on your head for more than a minute without sliding down and the case is not worth two cents. Please, if you buy the BC235XLT from them DO NOT get the free items. You will be disappointed. Do not have the order shipped to a POBOX the shipping will be doubled, yes doubled. If you have it shipped to a POBOX you will pay $36 for theshipping of the BC235XLT and $48 for the shipping of the two free items. I think these are bad BAD Bad business practices. Come right out and say its not free and dont hide behind shipping to get people to buy your products. I must say that if you buy a scanner and have it shipped to a street address you will save money over some of the other dealers. Now, if you dare to get any of their free stuff or ship to a POBOX you will be screwed. Another thing that bothers me is that shipping for the
BC235XLT is $18 using UPS ground service which is about $5 according to UPS. They charge you an additional $12 for a box, tape and closing the box. Is that the right way to do business? I dont know but I sure dont like it a bit. Their 61 day Money Back Guaranty is another scam. Yes, you can buy from them and be a happy camper, but if you dont watch out they will burn you. As far as the scanners and CBs, they sell a good product. I just wish they would change their business practices to a less insulting method.

Some people read my previous posts and asked me about other places selling scanners with good prices and good business practices. I found J&R Computer World in New York(www.jandr.com) and National

Electronics(www.sound.net/~ne). We are using them now as our suppliers. I'm just too upset with the way CEI(Communications Electronics, Inc.) does business.

BTW: I'm not trying to hide as someone said. I just dont feel posting my telephone number is a smart thing to do. If you reply to my email address I will be more than happy to respond. My phone number is out of the question unless I feel it is a matter that requires a phone conversation. Cheers!

Just FYI ... The CHP is still using the 42mhz freqs for Indio & San Luis dispatch centers and they have "almost" true repeater operation. My list of current CHP freqs only shows the 39mhz freqs used in the Border Division. The PAO at the local CHP office checked my statewide freq list and comfirmed it to be correct. That is not to say they will not be using 39mhz in the Bay area in the future.

According to my sources, the only place the 39mhz freqs are currently being used is CHP Border Division in Southern California. This is comfirmed my the CHP PAO at my local office. That's not to say they will not use the 39mhz freqs in other areas in the future.

Well, that is what it comes down to, isn't it? You will continue doing business with the company because you are satisfied. However, I refuse to do business with any company that states its business policies in fine print or who inflate their shipping/handling costs to compensate for lower margins elsewhere. Each to his own. For you to say that everyone is a "cry baby" or that he/she has "a problem" is hardly constructive. You're satisfied--let it go at that. Me, I choose to do business elsewhere. That's what a free market is all about isn't it?

I bet she would also. There will ALWAYS be people who have fears based
on what they read in the headlines or what they heard from an unreliable
source of information. I have heard SO many people say, "You're not
gonna get me in an airplane....those things crash". When statistically,
you are in MORE danger in the car ride going to or from the airport than
you are in the flight.

Andy

Sorta depends on how you interpret the words "No provision of these rules".
I read 97.1 as a provision of those rules. I read 97.403 as saying "Part
97 doesn't apply to anything in an emergency."

If someone wants to charge me with violating the type approval provisions
and/or license requirements in the Land Mobile rules for using my rig to
transmit emergency traffic, they may feel welcome to do so. Even if I
thought they could make it stick, I'd trade my ham license and money to
pay a fine for someone's life any day.

However, I keep in mind that I might be trading that license away whenever
I feel tempted to key the mike on a non-ham frequency.

And I have a much better idea anyway. In the spirit of volunteerism, I
work for a local emergency services agency, RACES division. As part of
the organization, I'm authorized by the Director to use my type-approved
GP300 to transmit on local police and fire frequencies under their
license. Bypasses the whole argument, AND helps the community in the
stated purpose of amateur radio.

Y'all could try it. (Some of you do.)

S 97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of
any means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human life
and immediate protection of property when normal communication systems are
not available.

According to 97.403, no part of Part 97 prohibits ANY form of communication
during an emergency.

I believe it depends on where you are, and what the local amateur
community is like. Around Chicago, requests for emergency help on a
repeater are likely to be met with stony silence; I once had a lid start
calling CQ over my second announcement of emergency traffic. However,
a friend tells me he was near Milwaukee when he witnessed a serious car
accident; he hit a repeater and got a pileup, and help was on the scene
within four minutes as a direct result of one of the hams contacting the
proper authorities.

97.403 says that Part 97 doesn't apply in an emergency. It says that
flatly and without qualification. It specifically says that Part 97
does not apply to ANY form of radiocommunication in an emergency.

If you want to quote rules that apply, quote from the Land Mobile Service.

>clowns starting up again I suggest you have your head examined.
>
What you lack in perspective you make up
with your archaic attitude towards people
in general.

your mind-stem is one millimeter shorter
than your mother's egg cavity.

Crap is what happens fellah. Shit happens.
Mackeral is the major problem...cheek-guy
just got in the way based on some bias his
ISP had against him....

Look...no one forced you to read any postings
by the cheek-guy. You know who and what is
his style and you know when you press his
number you get what he gives you or anyone
who listens.

You could listen or not. That was your choice.
He allowed his words to flow and you had a choice
to make. No one forced you to open the post.

So who in the hell is making you so stupid?

Why, gosh, gee...yourself. Cheek-guy warned you
a long time ago that he takes no check from no
one and if you want his remarks just be as stupid
as you want. If you talk about scanners he will
try to educate you.

But any other topic you will get his volley-full.

That was understood a long time ago. so How this
asshole ISP can cancel the cheek-guy and Mackeral
comes away clean suggests he was paid off or is
as stupid and screwed up as the smelly mackeral
and his genetic protozoa's.

What happened fellah was that an injustice has
been done to Cheeks. And if there is some way

that Bill can sue this ass then I hope he does
it asap. Make some money and move to Canada
for some peace and quiet and live in a country
where people don't litter sidewalks or back
yards or state or fed parks....

Another thing: i stated that the Cheek guy has
chosen not to get back on ... why?

What I meant by that is that how many different
Internet Access accounts are there in the USA?

if he wanted in or back, he could. Simple thing.

Maybe he just got tired of the process and
realizes that "quiet can be war"

bill conduit
etc.

4291. Re: Buying from Communications Electronics, Inc. can be a BAD BAD BAD experience!! Beware or get burned.

Newsgroup: rec.radio.scanner
Date: 1998-08-30 00:00:00 UTC
From: "Communications Electronics Inc." <cei@usascan.com>
Message-ID: <35E999A8.54912E05@usascan.com>
Source record: 145762
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

Thank you for your very kind comments regarding Communications Electronics having the most economical prices, prompt shipping, a professional grade web site and stocking high demand items.

As Chairman & Chief Executive Officer of CEI, I want to address your other concerns regarding the special offers currently available on our web site http://www.usascan.com.

Your first concern is that we appear to "look like greedy scoundrels. They advertise that if you buy a Uniden BC235XLT you will get free, a nice leather carrying case and a set of large headphones (I guess by Uniden also) free. Then in the small print they write that there will be an additional charge of $12 for shipping of each items." I checked with our Management Information Systems staff and they tell me there is no small print regarding the shipping, handling and insurance charge of $12 for the special offers. The special offers are one of the first items you would see on our home page. Our deluxe leather carrying case is made from top grain shoulder cowhide and manufactured to CEI specifications in black pebble grain finish. Each case include a bungee antenna retainer. The deluxe CEI carrying case for the Bearcat 235XLT scanner also has a special swivel belt loop with a revolutionary patented wedge swivel. You can find out more information about the unique features of our carrying cases by visiting the IBM patent search web site at http://www.patents.ibm.com/ibm.html. The patent numbers on our heavy-duty carrying cases are 5054170, 5201858 and 5347693. Our wedge swivel feature enables you to attach your radio case to a belt loop from any direction. There's no need to turn the your scanner upside down to attach it. There is almost no chance of accidentally dropping your scanner. We believe our carrying cases are definitely the future of the radio case industry. Out of the thousands of heavy-duty carrying cases delivered to CEI over the last three decades by our case vendor A.W. Enterprises, I have never heard anyone claim our carrying cases were "not worth two cents". In fact, this carrying case normally sells at CEI for $49.95 plus $12.00 shipping. During our CEI special offer, this carrying case is free, plus $12.00 for shipping, handling & insurance. A.W. Enterprises has been manufacturing top quality carrying cases for CEI and hundreds of other manufacturers since 1962. I have shared your comments with a number of people on our technical staff. We believe our carrying case designed for the BC235XLT is a fine product, and we have received overwhelmingly

positive performance comments on it. However, we want all our customers to be thoroughly pleased with our products, and I would like to solicit your suggestions for improving our carrying case. CEI and our case vendor would also like to inspect your carrying case but because you did not tell us who you are, it is impossible to arrange to have our manufacturers representative contact you.

Regarding the Racetrac headset, this special CEI offer was also offered on our web site homage at http://www.usascan.com. Again, we checked and there is no small print regarding the $12.00 shipping, handling & insurance fee. I disagree with your comments, "do not get the 'free' items. You will be disappointed." Our Racetrac model RT-40 headsets is one of the most popular items sold by CEI. When we go to the races at Michigan International Speedway and other racetracks, we see a sea of our red headsets on the heads of thousands of race fans. This headset is so popular that Uniden has combined the Racetrac RT-40 headset with the Sportcat radio scanner. This special combination package is also sold through other Uniden dealers such as K-Mart, Sears, WalMart, Best Buy, Circuit City and many more retailers. Our headset source is Racing Electronics who is also a dealer for our Uniden scanners.

For more information on the Racetrac RT40 headset please visit the Racing Electronic web page at http://www.racingelectronics.com. You will find the headset on page 25 of their catalog which can be downloaded with Adobe Acrobat. If you want an even better headset, check out the Racing Electronics model RT-28 headset with 24 db noise reduction rating. If you are concerned about CEI shipping charges, we recommend you call the Uniden dealer locator telephone line at 1-800-297-1023 and select option three to find your local Uniden dealer. The RT-40 headset normally sells for $29.95 plus $12.00 shipping but as you know, CEI is currently offering this headset free plus $12.00 for shipping, handling and insurance to anywhere in the United States or Canada.

You are also say, "Do not have the order shipped to a PO Box the shipping will be doubled, yes doubled". This is incorrect. The shipping, handling and insurance charges are $12.00 anywhere in the US or Canada for the CEI Special Offers. This is for UPS or mail delivery. CEI shipping charges on scanners however are doubled for Priority Mail delivery in the United States or Air Parcel Post to Canada as advertised in our ordering section on our web site.

I disagree with you that are higher handling fees are "a bad business practice". The vast majority of our items are delivered to our customers by United Parcel Service. Driving packages to the Post Office multiple times per day to meet flight and dispatch schedules is an expensive burden for CEI. This cost is passed back to those few customers that require this service.

You also indicate you are bothered by our $18 charge for UPS ground service. Please remember, that CEI is not a normal dealer.

We serve as an Emergency Operations Center providing mission critical communications equipment primarily to government agencies. Just ask the thousands of customers who have purchased product at Communications Electronics, Emergency Operations Center in Ann Arbor, Michigan. You might also want to try this simple test. If you came to CEI to purchase six hundred Trunktracker scanners and two-way transceivers, we have got you covered. Now try this same test at your local dealer. Most of our dealers stock less then six radios. There is no reason for them to stock a large quantity of inventory. Stocking dealer inventory is very expensive. That's why dealers rely on distributors like us. Stocking distributor inventory is even more expensive as we have significant dollars invested in inventory. Our inventory carrying costs are passed back to our customers in a higher handling charge. CEI also provides significant customer benefits listed on our web site. While these customer benefits may not matter to you, the expense of providing these benefits to all customers increases our total cost of operations. Our handling costs are passed back to our customers in our handling fees. You can avoid these irksome fees by supporting and shopping at your local Uniden dealer. It's kind of like going into a hospital emergency room to buy an aspirin. They can sell it to you but you will not necessarily like the emergency room price. Like a hospital emergency room, our Emergency Operations Center has higher operating costs which was passed back to you in our handling charges. This is one of three items in our shipping, handling and insurance charges.

You also claim our "61 day Money Back Guaranty is another scam." More correctly, on the CEI customer benefits page, our "61 day 100% satisfaction guarantee policy" means if you are not completely satisfied with your purchase, return the item in like-new condition, freight prepaid within 61 days for a prompt and courteous refund. Although the vast majority of our customers love the products they purchase from Communications Electronics Inc., we realize sometimes customers may order a product that is not suitable for them. Of course, if you love your scanner, you will keep and enjoy your scanner and not need to return it. I do not understand why you claim our return policy is a scam. It has always been CEI's pleasure to help our customers get the merchandise they want. Please clarify just what is your concern with our return policy so I may assist you. Some customers suggested a shorter or longer time period than our current 61 day policy so please tell me specifically what you want changed.

You also indicate, "Yes, you can buy from them and be a happy camper, but if you don't watch out they will burn you".

Why do you feel this way? Our prices and policies are clearly and conspicuously posted on our web sites and national advertisements. You have said "if you buy the BC235XLT (like I did) please beware because they will screw you and then tell you it was

written somewhere on their web site". I disagree with your comment. When you call 1-800-USA-SCAN to order, you know what price you will be pay before ordering. In the unlikely event you believe there is a misunderstanding after the order was processed, it is easily resolved as all unclassified telephone calls are recorded at CEI. You claim our shipping/handling charge in our CEI special offers are in "small print". As the size of the type is the same for the offer and shipping charges, please point where the small print is on our home page.

As to your claim that CEI business practices makes them look like "greedy scoundrels", many customers have sent me E-mail indicating that our total price usually saves them money. If the bottom line represents a savings to you, what is the problem?

Regarding your comment that you would "wish they (CEI) would change their business practice to a less insulting method", we appreciate your comments. Please be assured we did not intend to insult you. I have passed your comments to our staff and will share them with our customer at our focus groups.

CEI welcomes all customer comments. Since you have shared your feelings in alt.radio.scanner, rec.radio.scanner and rec.radio.swap, if other people in these newsgroups want to contact me regarding any CEI service or benefit, please feel free to E-Mail me at cei@mediaone.net or call me at 1-800-USA-SCAN. After all, the exclusive guarantees, benefits, convenience, services and savings offered by CEI were developed from what our long term customers told us they wanted over the last three decades.

Unfortunately, you did not provide me with your name in your posting. Some of our customers have pointed out that your internet provider at http://www.pcsrock.com claims that anyone can get a free anonymous private e-mail account at IGN mail which could be used to disparage any company just for entertainment.

I am genuinely interested in helping you and would appreciate knowing your CEI invoice number and date of transaction where you claim to have been "burned" by our merchandise. Please feel free to comment in this forum(s) or send me E-mail if you prefer. We at Communications Electronics Inc., Emergency Operations Center value your business, and I thank you again for contacting us.

A good freind of mine was driving home and was a witness to a vehicle that
hit and ran a young boy while he was crossing the street on his bicycle.
He was listening to the police dept. dispatch on a modified FT5100.
He immediately called dispatch, told them who he was and what he witnessed.
He waited at the scene and had to testify in court. The local PD thanked
him for his efforts, and not once did they mention anything about illegal
transmissions and such.

I think in this situation, it was perfectly acceptable for this guy to
transmit on the police freq. with a non-type accepted radio in order to save
this boy's life. Any other time...NO!

I am interested in decoding a local MDT system and I am interested if anyone has any information of any of the following:

The system is mfg by: MDI Mobile Data International (Now I believe a subs. of Motorola)
Model 9300
Uses I believe PD-LAP protocol.

If anyone has any knowledge they would like to pass on I would be thankful.

I am interested in developing an application similar to the one for the Motorola 4800 MDT application but for PD-LAP use. Any assistance provided can make this application become a reality .... that way we can all enjoy the benefits.

Thanks

Bud-
Victor does have a valid point. I got along with Bill and
never was flamed on the newsgroups...we didn't ever see eye-to-eye,
but we never got to the point of using foul language nor did we ever
put each other down. There were several things that Bill 'discovered',
but lacked some of the technical knowledge to somehow come up with all
of these items. He was the first one to admit that he knew the
slightest about programming, but yet there were several of his
extensive coding that popped up in several articles, books and
webpages that he contributed to his own doings.
Some parts of me wish that Bill was on this newsgroup to voice
some opinions and bring up some ideas...but then there was a Bill that
did want to stir things up. I'm not saying that he was totally at
fault, he wasn't...but there were the "13DD's up ppls asses", "I'm a
Win95 guru", "WinRadio Support" and the "knock, knock Mackey" stuff
that took away from the depth of professionalism and the admiration
that I that I have for him.
Give it some time and maybe he will do some changes and
rethinking, but just because you don't agree with Victor's comments
nor do you actually know the truth about everything...then please try
to refrain from slamming someone or using foul language to get a point
across...it doesn't work and only hurts your own image.

I don't have any information specific to the Pro-2001, but there are several models that would be very similar. Go to http://support.tandy.com/support_electronics/2849.htm and there are a few online manuals that can help you out.

Radio Shacks 99 catalog has a trunking mobile scanner PRO-2066
available Oct 30, 98.

My question is: Historically, does Radio Shack wait for that date before
they can be sold? Or can they sell them before that date, when the shipment
comes in?

Thanks, Bob

What is DIS-honest about CEI's shipping charges?

They tell you what they are up front. Yes, i agree that they are
high, but there are no surprises. Ken Ascher also responded here
publicly numerous times explaining in great detail about their S & H
policy.

Nothing DIS-honest there.

With the shipping, on MOST, if not all items, the FINAL price is often
lower then morst other vendors.

Whats the problem?

4306. Did Linda Tripp violate the ECPA in addition to Maryland's Law

Newsgroup: rec.radio.scanner
Date: 1998-08-30 00:00:00 UTC
From: Jeremy Ayer <"Jeremy Ayer"@Chaos.com>
Message-ID: <35E8BBF9.D68D528D@Chaos.com>

Could someone please find fthe exact Maryland statute, law or code that
Linda Tripp is accused of violating?
==========

Tripp reportedly told of Maryland wiretap laws at RadioShack store

By Greg Toppo / Associated Press

COLUMBIA, Md. -- RadioShack employees reportedly
warned Linda Tripp when she bought a recording device that it
is illegal to tape a phone conversation in Maryland without the
other party's consent. If she was warned, she could lose a big
legal defense -- ignorance of the law.

Mrs. Tripp's defenders have dismissed the Maryland
investigation as retribution for her decision to go to Independent
Counsel Kenneth Starr with 20 hours of taped evidence that
former White House intern Monica Lewinsky and President
Clinton had an affair and tried to cover it up.

Tandy Corp., the parent company of RadioShack, announced
Friday that under subpoena it gave prosecutors a sales receipt
showing Mrs. Tripp purchased a recording device. Two
employees from a Maryland store also testified before a grand
jury about the purchase, the company said.

Tandy declined comment on a report in Friday editions of The
(Baltimore) Sun that the two employees testified they warned
Mrs. Tripp it was illegal to record a phone conversation in
Maryland without the other party's consent.

Mrs. Tripp's spokesman, Philip Coughter, said: "This is by no
means the first time that false statements have been made
concerning Linda. Sadly, it probably will not be the last."
Breaking the Maryland law is a felony punishable by five
years in prison and a $10,000 fine. But prosecutors must prove
the person knew about the law before the taping.

Tandy said it sometimes warns about wiretapping laws,
which vary from state to state.

"If there is a reason to believe a recording device may be
used illegally, it is RadioShack's policy to inform the customer
that it is illegal to record someone without their consent in the
state of Maryland," the company said in a statement Tandy spokesman
Ron Trumbla would not expand on the statement. "The operative word

obviously is 'if.' I'm not going to go any further," he said.

The Sun also reported that the device Mrs. Tripp purchased carried a warning on the back of the package stating it is illegal in some states to record a conversation without the consent of all parties.

A grand jury has heard two days of testimony in the investigation. A judge last week approved prosecutor Stephen Montanarelli request to have the grand jury's term extended indefinitely to hear the Tripp case. Montanarelli would not comment Friday.

I think you ought to buy all yer CB stuff and get yer free catalogs at Best Buy, Circuit City or that storehouse of electronical leeneer fixerator parts, Wal Mart! Stay out of Radio Shack if it upsets you so much. Surely they don't have anything an expert like you can't get from the other 12 parts stores open on every street corner!

I am looking for a mobile scanner antenna with a TRUNK-LIP MOUNT.

Have a Radio Shack mag mount scanner antenna - can this be converted to a trunk mount?

Have seen the Austin Spectra - runs about $100 (little expensive).

Have seen the SCANNER WORLD antennas - don't know how well they work.

Any thoughts are welcome...

In my area, the trend has been to make the payphones outgoing only, IE
no incoming calls..perhaps you could suggest that to the powers that
be..?

Hmm, that would be Stubblefield and Loomis I suppose. Nathan B.
Stubblefield was sending wireless *voice* modulated signals in 1873
(he did a demonstration for Congress between a ship on the Potomac
and a shore station while lobbying for money to develop his invention
further, the demonstration went fine, but Congress didn't give him any
money). Loomis was operating his aerial telegraph during the same
decade. This was an *unpowered* system which depended on the natural
electrical gradient, but Loomis demonstrated it over a 23 mile path, not
bad for a purely passive system.

Of course Tesla had his oar in there too. In 1895 he demonstrated
a radio controlled submarine in New York. And we all know about
his Colorado experiments in 1899 where he resonated the Earth,
and the Wardenclyffe tower (the first capacity hat loaded vertical)
he built to distribute global wireless power (he went bankrupt before
bringing that to fruition). Tesla's patent on the double circuit tuner
was what finally broke the Marconi monopoly on radio too. (Marconi
was infringing Tesla's patent, Marconi's own single circuit tuner patent
didn't work over more than a few miles, he had to use Tesla's double
circuit configuration to get any real efficiency and range.)

Marconi didn't really invent much. His original patent was just a
rehash of Hertz's prior art. He did invent an improved coherer,
which was quickly superseded by crystal and electrolytic detectors,
and he did slap his name on the unbalanced monopole vertical antenna,
though Loomis used it first. Etc. Marconi was mainly a promoter and
businessman, sort of like Bill Gates. He didn't invent anything much,
but he knew how to aggressively grab and market the ideas of others.
He deserves credit for creating a commercial radio industry from
what had been up until then mostly just a scientific curiosity or
a hacker's toy.

Well, ever the pedant, I must say that CW is a pure sinewave carrier.
It can be modulated by on off keyed Morse, or it can be modulated by
voice, or it can be frequency shifted for RTTY, etc. All current radio
is CW, even SSB which depends on a pure CW carrier even though
it suppresses it before transmission.

The alternative to CW is DW, ie Damped Wave instead of Continuous
Wave. DW was also called Spark from the way it was generated. That's
illegal now, though it was heavily used in the early days of radio before the
Fessenden and Alexandersen alternators came along to produce CW, and
before Hartley used Fleming's valve to produce CW.

And BTW, much of early radio used FSK to transmit Morse rather
than on off keying. That's because arc transmitters couldn't easily
be started or stopped, but it was easy to key a reactance to shift their
frequency.

Ah, sounds like the RS I go to. It's a scary thing to actually ask them
a question. They usually have no idea what you're talking about. I've
also found that I have to take them around the store finding the items
I'm looking for, rather then them showing me where they are. But the
best one was when the salesperson asked me if I had to graduate from a
school of broadcasting to get my license. If those poor guys didn't have
that catalog, they'd have no idea what they were selling...

If you look upon the USA as one country it does sound nuts, I agree, but living in Europe where it takes me one and half hour to get to one other country and may be six to a second different country, I don't see it as more diffocult there than here. Think about the USA as 50 different countries and you're no worse off than we are in Europe.

In Norway you can still talk on a cell phone while driving, in Portugal you can not. You do, you get a fine, an excuse that you didn't know won't help much. You come to Norway and drive with 0.06 won't help you much that most of the USA has a higher limit, anymore than it would for a Norwegian driving in Sweden with 0.03 as their limit is .02.

Here most people go to the Motor club before they go to another country, and they will tell them about the laws that are different from the ones we have. I am sure that would be possible in Canada as well.

Anne

While on the subject, I've got a question. My BC700A is supposed to be
triple conversion. With all that going, why such *terrible* image problems?

Look at the number of cops who have testicular cancer from holding their
radar units between their legs while sitting on their motocycle waiting
for the next car to approach them.
They sat there radiating their testicles for hours on end. I call that
"Well Done".

This post I am replying to that calls for Bill Cheek to be invited back because he is a valuable resource simply isn't true. Bill has ripped off the ideas of others and then promoted them as his own in some cases. The most glaring example recently was when he promoted Winradio programming by showing that he wrote a piece of software that did something. I found the original piece as a bit of Winradio documentation on their Web site. All Bill did was change the frequency data in one line. This is equivalent to a newbie writing 'Hello World" and then adding his name and then declaring he now was an original programmer who would for a fee teach you how to program. His posts related of computers etc. in his newsletter are of similar nature and it amazes me that people are willing to pay for it. What a waste of paper!

He comes from the world of CB where he was a hero among those with absolutely no knowledge.
He has moved into the world of the internet and scanners with the demise of interest in CB. There Bill Cheek still impresses those with a general lack of technical knowledge.
His posts to USENET still sound like the trash talk you still can hear on CB at its worse.
The heroes of the scanning hobby today are those that are developing the MTRUNK and trunktracker programs and the hardware ideas that lead to the Bearcat Trunktracker line. That is original work that has benefit us.

For technical mods one would be better suited to read "Nuts and volts", Qst, 73, etc.

Why anyone would define the right of Bill cheek's trash talk back here is beyond me. The right to free speech has its limits. For example who whould defend the right of a fool to holler fire in a crowed movie theater if it resulted in the death of innocent women and children. Didn't he have the right to freely say what ever he wanted? That is an obvious example of the foolishness of defending the idea that free speech should have no limits.

4332. Multiple Trunks

Newsgroup: rec.radio.scanner
Date: 1998-08-30 00:00:00 UTC
From: Joshua Carroll <jcarroll@nol.net>
Message-ID: <35E92930.B244B38F@nol.net>
Source record: 145847

Is there a scanner out there that can scan multiple trunks.
Say City A has 5 freqs City B has 5 freqs and so does City C.
To listen to them, I have to put them in seperate banks (a RS Pro-91)
and can listen to them seperatly. Is there a scanner that I could
program all the cities that can fit in one bank and scan all three
cities??

Also, is there a trunk-scanner that can allow for Trunk and Conventional
scanning. Some cities I drive thru are trunked, some are not.

Any Help appreciated,
mailto:jcarroll@nol.net

4333. Used O-Scopes in Toronto??

It seems to be individual store policy. The store where I got mine said
word from the regional office was to give them away with a purchase. I
made a large purchase the day before they came out and the manager said
to come back the next day with the receipt and they would give me one.
I did and I got a one foot long receipt for the catalog for a total
price of $0.00!

The person in this case obviously used the officers own radio to
transmit which would be welcome and accepted. Since this discussion started so
many people are getting this confused with someone tuning a ham radio to a
police frequency and trying to transmit. A few days ago there was even some
bozo who could not understand why he couldn't be heard trying to transmit on a
handheld scanner!

As this thread has progressed I've seen no logical answers to this
original question.

In an EMERGENCY all bets are off. You may do whatever is necessary to
save a life or destruction of property. You won't be prosecuted if you
truly feel there was a life & death emergency.

Everyone who keeps citing the laws are pussies who are afaid to key the
mike. And if you see a woman getting raped and fail to key the mike, you
are an accessry to the crime. Period.

I am dismayed that so many of you make excuses NOT to get involved when
someone's life is in trouble. Shame on you!

And that goes to doctors, too, who drive by fatal and serious accidents
and never stop - you should losse your medical licenses.

Bob McCarthy
Denver, Co.

At the risk of 'playing radio lawyer' - one instance does not the rule proove.

Part 97.403:
ï¿½97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of any
means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human life
and immediate protection of property when normal communication systems
are not available.

Ok - sounds good, but then if you read the begining of Part 97:

ï¿½97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio
service having a fundamental purpose as expressed in the following principles:

later on there's mention of different license classes, bands etc.

So - the argument can be made that Part 97 ONLY covers the ham frequencies. At the same time it's pretty tough for an enforcement agency to hang a 'good samaritan' out to dry for helping save a life.

My conclusion: Seems it's technically illegal to operate outside the ham freqs in any instance - but it may not be pursued if there's apparent 'justification' as in Don's case. You roll the dice and take your chances - only you can decide, if and when you're in such a situation if you want to play the gamble. Looks to me like Don was fourtunate - but it could have as easily gone the other way.

73!

>be..?

That has already been done here, although not all payphones are
compliant yet because many of them are operated under contract by
companies other than the main phone utility.

>In an EMERGENCY all bets are off. You may do whatever is necessary to
>save a life or destruction of property. You won't be prosecuted if
you
>truly feel there was a life & death emergency.

That is simply untrue. Yes, I agree that it SHOULD be OK to do
whatever is necessary to report an emergency. But YOUR belief at the
time is only an affirmative defense, not a complete justification.
Hams HAVE BEEN PROSECUTED for doing just what you describe. It's
stupid, but those are the facts.

>mike. And if you see a woman getting raped and fail to key the mike,
you
>are an accessry to the crime. Period.

Nope, sorry. We have no laws in the United States that require the
average citizen to report a crime. Don't use legal terms unless you
clearly understand their actual meaning. An "accessory" is a legal
term that is defined in criminal laws.

>And that goes to doctors, too, who drive by fatal and serious
accidents
>and never stop - you should losse your medical licenses.

Doctors CAN lose their licenses, and tons of money, for stopping and
rendering aid in some situations (like practicing outside their
specialty, for instance). Don't be so quick to condemn unless you
know ALL of the pertinent facts.

Can you provide numbers or statistics?? I have been a full time law enforcement officer for 19 years.....23 years counting my time in the military. I don't know ONE officer who has testicular cancer.

The studies have shown that officers who work radar have NO higher incidence of cancer than officers that do not (I am referring to an article in April 1992 Law and Order magazine).

From everything I have read on the subject, I am in MORE danger of contracting cancer by standing out in an intersection directing traffic for an hour, than sitting in a car with a radar unit for 8 hours.

BTW, I keep my radar unit in "RF Hold" until I am ready to clock a speeder. This of course, lessens even more the non-existant cancer threat for those who might believe it.

>
>Thk,Peter
>
>--

Think,Peter

look at the manual.....open it to
page one...ok.

now, just read one section at a time.

one section at a time...understand
what it says and move on to section
number two in a few days...until you
have concluded.

the programming is done in steps....

in increments.

you have to see that it's a process
which just reading once and then thinking
it's just "push a button" as on other
scanners...NO. that won't suffice

each section is an answer for that particular
step in order to get it going.

remember: you have to enter the frequencies
once and then when you get ready to put access
to trunk you hvae to enter them again...into
that bank.

just take a deep breath or get some
good grass and relax....

one section at a time...

it's a variable-accessable scanner:

both conventional and tracking the trunk

you can program the conventional first.

then the trunk-tracker section when
you press the trunk-tracker button to
have it go to TT...then it will accept
those frequencies which it will then
hold and then you press SCAN and it
will do it's thing. If you don't want
to listen to what it is scanning for
you then can program in the numbers you
find for your area.

call them CODES.

again, take it a step at a time...learn
one step and then two and then three
ad nauseum.

you can do it.

patience.

Asshole...

for the same reason you posted your
stupidity for all to see here....plain
stupid. as if you hold the key to what
will be allowed to be printed or not.

your analogy is pure stupidity. Has nothing
to do with scanning. maybe those women and
children deserved to die: they are afflicted
with Mackey, his gene pool.

Actually FREE SPEECK is a misnomer.

It's the right to speak without government bashing
in your head because you upset some fool who got
elected and is having an image problem.

It's the right to say as you think.

It's the right to say what you think as from
what you learned: you evidently have very little
knowing to pass on to anyone who would try to
understand your "inanity"

Speech is not free. it carries with it a price.
To hear and to not hear. To say and so others
can decide as to what to hear or not. But not

to have someone say: "you cannot say that because I don't like it"...as you seem to be one of.

You evidently come from the bile of Mackeral. The wunnerful area of reality called "vile-bile" as a purveyor of one's redundancy in this world.

Speech is what it is. People talking and others listening. That's it.

Cheek-guy had lots to say. he was funny. he was intelligent. he did not like you or mackeral. but that is his bane. he just exists on a higher plane than you or the stink-mackeral.

You and the bile-boy cannot reach where bill cheek is and this pisses the hell out of you and that gives you your due: where both of you are is in the streets of where foul bile is found.

Kindly show us your true side. Give us some more wunnerful epistles of wisdom your mother gave to you when she removed that brown thing going down her leg onto her tit.

You may want to suggest something done in other cities, who felt
that they had this same problem. They made the phones outdial
only, with rotary dial.

This ran off the people who were hanging out to recieve phone
calls, (Mainly drug dealers and streetwalkers) and it ran off the
people who used the phones to call the pagers of the above.

Welcome to PA! Everywhere PENDOT has one of those signs that they
can program the message into like "construction ahead" has a little
thing hanging under it or on the side. This little thing transmits a
radar signal that triggers your radar detector. It sure slows you
down and gets your attention.

> dicker with me when I asked for someone to call the police.

But be reminded that I said "where radio service was
scarce". On both occassions I was in locations where
cellphones didn't work. My second choice, in both cases,
was the company land mobile radio - in these area I had no
coverage from company repeaters either.

But in both cases I was able to reach someone I knew, so
nobody had to screw around with me. I think I know what
you are talking about - you call in an emergecny and the ham
on the other end wants to know everything about you
(probably trying to verify you in a call book too) before
he'll call for help. Its never happened to me, but I have
heard it happen to others.

My cell phone is my first choice for emergency
communications. Depending on what I am doing, or where I
am, amateur radio is often third or fourth on the list.

>
> In fact, there is no longer any superstition in my mind that amateur radio is
> relevant any more in this day of satellite transponders and cell towers. A

> ever be.

I think amateur radio can be very useful in time of major
disaster. But I think it is a very small percentage of hams
that make the service look so useful in such situations.
From what I have obseverved, and expereinced, I would say
that at least 8 out of 10 amateurs are not compentent enough
in operating to be effective in handling disaster traffic.

Ted, you don't get it.

IT IS ILLEGAL TO TRANSMIT OUT OF BAND ON EQUIPMENT NOT TYPE-ACCEPTED FOR A CERTAIN BAND.

97.40x states all of this -- an amateur may use ANY AMATEUR FREQUENCY, but NOT ANY FREQUENCY.

Not a good answer (in fact, I didn't even write that).

It is ILLEGAL to transmit on a band whose FCC regulations require
BAND-ACCEPTED equipment. Read 97.400.

What if there are no windows, or if you are somehow unable to scream or get
to an opening?

>With a cell phone you will choose who you talk to, and make the
>call count. Most people can remember 911 or whatever.

You can choose who you want to call on a repeater autopatch, too. A repeater
autopatch is basically a semi-duplex cellular system, with the exception of
not being able to be "handed off" to another repeater. Some repeaters allow
incoming calls, also.

4360. Wanted: UC1771 Chip for a Pro-26 Scanner

Newsgroup: rec.radio.scanner
Date: 1998-08-30 00:00:00 UTC
From: scott@denimdoctors.com
Message-ID: <6sc2st$7cs$1@ultra.sonic.net>
Source record: 145875

Wanted: A replacement chip for my Pro-26 scanner, OR a UK version of the pro-26 logic board. I will pay good money for either.

Currently my scanner has a UC1702 chip and I'm looking for a UC1771 to replace it with, OR the whole logic board.

A company out of England called Javiation used to stock these items, but no longer.

Perhaps you bought eith one of the chips or logic boards intending to make the change but you never did and now it's just laying around your house. If this is the case turn that thing in to cold hard cash.

To respond to this post write to sstevens@(no spam)santarosa.edu
be sure to remove the (no spam) part ...including the parentheses.

Thanks,

-Scott

Ya know Victor, when I've been searching for mods, I ended up with Bill Cheek's past posts to this NG. Although many people have contributed to the NG, Bill's advice and expertise has been probably the most prolific on this NG. I'm currently working on a project to build an interface from my scanner's discriminator output to my PC. He put it up there for FREE.

Have you been as prolific with your advice Victor? I don't recall any of your posts being at the end of my searches for scanner info. What kind of expert are you Victor? What kind of books have you written and published?

What is your agenda Victor?

Since it is a dual conversion scanner.....

Lest we get confused, it's probably important to note that there is
a Uniden SC-150B, which is a triple conversion scanner which does
not (IMH experience) receive cellular images.

There's been some discussion of various "SC-150" mods in this
NG over the last month or two, but these seem to be for the older
dual conversion SC-150, not the 150B or 150Y.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner

owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140. |

Sources for Replacement NiCd Battery Packs |

Replacement NiCd battery packs and inserts for the | BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other | scanners are available from Uniden. I've purchased them at | lower cost from: |

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview | Rd., Middleton, WI 53562. tel. (608)831-3443. email | ehyost@midplains.net |

2. Battery-Tech Central, 2818 Southland Street SW, Cedar | Rapids, IA 52404-4141. tel. (800)267-3087 or | (319)364-0855. email rlassoc@inav.net |

Batteries Plus has stores across they country and some have | rebuilt Uniden NiCd packs for under $20.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

4369. FAQ: Plectron and Motorola Alert Monitor Receivers

Newsgroup: rec.radio.scanner
Date: 1998-08-31 00:00:00 UTC
From: parnass@bell-labs.com
Message-ID: <6sf5gb$8gh@ssbunews.ih.lucent.com>

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Aug 1998 - Sony SC1PC portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally

generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot

be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be

arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service

Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older

Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as

federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during

search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby

SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other

owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be

loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod,

especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT

but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test

results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no

scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel

programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state,

and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central

time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

In my hometown vincinity most were removed due to low profits or extreme vandalism.

Think about this for a moment, most phone companies own cellular or PCS carriers, therefore payphone which generate only $0.35 to $0.50 a call, to encourge wireless usage which nets $1.00 or more per call.

anyone wrote:

> Is the CHP now using RADAR?

Yes.

The CHP has actaully had radar for quite a while in areas where local government would pay for it. But up until a yer or two ago it was not used on the freeways. It is now.

You will find many freeways with speed limit signs marked "Radar Enforced".

check out the Icom Q7A, It's about $200. It's got 200 channels and it's a HT/ 6m, 440Mhz. transmitter. it'll pick up cordless, standard and 900 mhz, as of yet, there is no mod for cell. see it here. Icom IC-Q7A I love mine.

Good luck, Matt

This radio is a double conversion (Uniden SC-150B & SC-150Y) not triple
conversion.

The Y and B stand for Yellow and Black and as far as I know they are all double conversion. I do remember reading somewhere that they(Uniden)would be changing the SC150 to a triple conversion so that you could not receive cell images but I don't know if this is true. There are some mods for it on my home page if you would like to check them out.
here is the link. http://www.loop.com/~troll/Scanner.html

> anyone out there have a list of what these codes mean?

What do you mean 10XX codes and 4XX codes??
(Im from Houston, but they are mostly the same for big cities)
The 10 codes can be Apco codes, like 10-4 (recieved), 10-2 (clear), etc...
The 4 codes could relate to the district, command, and unit numbers
(If they say like 4-Dan-13 That would be district 4 of command D (which
could be southeast, west..
etc) and 13 could be that persons unit number.
You can find Apco codes in Police Call and Beyond Police call (from Radio
Shack)

While I agree that there are legal problems with transmitting on public safety frequencies, could give me one case where and amateur was prosecuted for sending bonfide emergency traffic outside of the ham bands.

>
> According to Part 97 (97.40x), IT IS ILLEGAL TO TRANSMIT OUT OF THE AMATEUR
> BANDS with a radio that is not type-accepted for a non-amateur band.

That is not entirely true. Your stuck on the issue of private land mobile services. 97.40x does not address type acceptance issues.

There are more services than private land mobile where someone could get help.

Women only get raped by telephones? And what do you mean by "you shouldn't be watching anyway"? What kind of a stupid statement was that?

Again - I would advise to use the most "legal" means of calling the police. But after making a reasonable effort to do so, I sure as hell would not stop trying before using my radio.

Please swap!
Looking for scanner frequencies for the area local to Keene, NH

Below are the scanner frequencies we have gathered, some from 800-448-0414
and some from a friend. You can also send for a book of frequencies local to
any area for $3 each by calling 800-423-1331 (That's not me - just letting
you know what I know :-)

State of New Hampshire:
Police: 042.440, 044.340, 044.820, 045.220, 045.260, 045.300,
155.655, 155.910, 156.090

Medical: 462.950, 463.000

155's: .175, .205, .220, .340, .345, .385, .400

Dept of Transportation: 037.940

Forest: 031.900, 151.295, 151.340, 159.315, 159.345

Local to Keene, NH - Miscellaneous (translate 'unidentified')
045.020, 146.520, 153.890

154's: .280, .385, .430, .640, .650. .770

155's: .025, .160, .070. .220. .250, .280, .265, .340,
.370, .475, .520, .535, 565, .640, .775, .865, .880

158.820, 462.957

In case it matters (I'm new to all this) the scanner being used is a
handheld Uniden Bearcat BC80XLT at 800 MHz.

Thanx in advance!

This and the "how do I transmit on police frequencies" thread have me once again questioning how good we amateurs are at handling emergency communications. Sure - some can organize in time of disaster and handle things through RACES and ARES, etc. But what about the remote station that needs help on an otherwise normal Tuesday afternoon?

Why the hell should a ham have to consider leaving the amateur bands to call for help in the case of immediate threat to human life or property? Why can't amateurs, among everyone in the radio world, provide a more ubiquitous method that would give most hams something they could try first.

Most of this "modifying radio for out-of-band emergencies" is on VHF. Most of these real and hypthetical scenerios involve mobile users. So I ask the same thing I asked a couple of years ago - why can't we set aside a simplex VHF frequency for calling and distress calls only? And encourage hams - and scanner users (even police departments have scanners) - and anyone else to monitor that frequency.

I suggested this a while back and nobody liked the idea. I thought the reasons for shooting it down were pretty lame. Turning those reasons into to questions (going by memory)

Q. What frequency?

A. 146.52.

Q. Thats the "national simplex" channel - what will we use for a simplex channel that we can use everywhere?

A. I would propose that it be a calling and distress frequency. You could monitor, and establish contacts on this frequency. Once you have established contact, you move to another simplex frequency or a repeater per a local bandplan.

Q. Amateurs can use any mode, FM, SSB, CW. What about people that "don't have FM"?

A. FM (or equivalant) would be the "preferred" mode to use on this frequency - that is simply traditional, but you could use any mode you want that complies with part 97. You'd use FM if you have it for emergency - that would be the smart thing to try first. But if you don't have FM, use what you got.

Q. You're assuming that everyone has 2 meters. What about those that don't?

A. Most distress calls come from mobile users. Most mobile users have 2 meter capability. (Please don't tell me that this is not true just because *you* only have HF in your car or something. Most mobile hams have 2 meter capability.) If you don't have 2 meters - you'll need to figure out something else.

There would be problems with this system. There are places in the country (usually large urban areas) where 146.52 is "polluted" with idiots - but then, the whole band is probably polluted in these areas too. You'll have an enforcement problem - but you already know someone is listening in these cases.

But for those of us that travel in more "remote" areas, having a standardized place to make the first attempt at an emergency call. I don't use 2 meter repeaters much at all. The VHF side of my mobile is usually watching 146.52 and 156.800. 52 is pretty quiet in rural areas but it is occasionally used. So there are people out there.

All I am suggesting is making one frequency a calling and distress frequency. Using just like ships and boaters use channel 16 (156.800). I am not suggestng that we make it emergecny only so that it can't be used for anything else - if you want to make calls on it - go ahead. Then you move somewhere else.

Signal reports and radio checks should be allowed on 146.52 (unlike 156.800, where radio checks are prohibited - it is strictly for hailing and distress). This would allow contesting to continue on the simplex channel, provided the contacts are the typical contest type - signal report, location, and "good luck" in the contest. Contest rules should respect the frequency as a "calling channel".

I realize that a hundred people are going to tell me this is a lousy idea. I still think its a good one.

> tired of the NG?

Good point Mr. Conduit. If Bill wanted to be here on this NG
he would. He has made other posts elsewhere on the internet.
I think that being kicked off of his ISP & his favorite mailing
list all within 30 days had an effect. The effect being that he
realized
he has been causing trouble & was no longer wanted by most on the
scanner related areas.

While Bill Cheek certainly caused the scanning internet users a lot
of grief in the past, two wrongs don't make a right so lets not
disturb him further. Let's leave Cheek alone.

Below is proof of Bill's presence:

Email:bcheek@cts.com
Date:1998/08/26
Forums:microsoft.public.windowsnt.setup

On Tue, 25 Aug 1998 17:38:08 GMT, bcheek@san.rr.com (Bill Cheek)

Funny how YOU are still trying to continue the crap!

I think everyone on here whether they Like him or not should
start sending e-mail off to ekruse@san.rr.com to thank him for
revoking Bill's account.

He has done the scanner hobby more bad things than anyone on this
group.

> What are you going to do when mackey decides he doesn't like

> you know it you have lost your account.

Your logic reminds me of people who blame a woman when she gets raped
saying that her clothes were to suggestive. The only person who has
responsibility for Bill Cheek's actions is Bill Cheek himself! Don't
try to blame me or anyone else for Bill's behavior. His ISP warned him
several times & he continued. Just like on the Scan-L mailing list
where he was warned several times before he was kicked off.

Within a 30 day period Bill was kicked off of his ISP & the Scan-L
mailing
list due to abusive behavior after several warnings. No one else is
to blame.

Is it me or does the PRO-2040 look like the PRO-2048?

Is the difference the just 100 vs 200 channels?

Are there any memory mods for the PRO-2040? I haven't
found any. Seems like a simple mod would be to swap
a board from a PRO-2048 into a PRO-2040.

4415. E-9-1-1 Communications Center - Help needed

Newsgroup: rec.radio.scanner
Date: 1998-08-31 00:00:00 UTC
From: craigp9952@aol.com
Message-ID: <1998083119325300.PAA21071@ladder01.news.aol.com>
Source record: 145652

To anyone that may be able to help:
We are in the process of setting up our new Communications Center and are in need of a particular item:

We would like to set up a status map of all our fire stations that would be controlled by a computer linked into our CAD system. It would need to control 80 or so LED lamps from the signal sent by the controlling computer. Basically, each fire station would be represented by 2 LED lamps (1 for Engine, 1 for Paramedic). If the units were out on a call, the lamp would be out. If they were in quarters, the lamp would be lit.

We are looking for suggestions on how to do this. Any help provided would be a great asset. As far as I have seen, Austin (TX) Fire Department and Chicago (IL) Fire Department have such systems, but have been less than cooperative in sharing their information. Any information may be sent to the address, phone, fax, or e-mail listed below.

Thanks, and be safe.

What you've said is you have to try every frequency on your radio before
you used it to call the police - not what I would call reasonable
effort. I would refer to that as extraordinary effort. A reasonable
effort would be all that is necessary.

That would certainly be necessary for you and I, but to legally contact the
police, ALL FORMS of communication (including each frequency) must be tried
FIRST.

That's the way it is -- Part 97 states this.

FWIW, CEI charges a "shipping and handling" charge, so comparing just calling it "shipping" and comparing it to UPS rates is probably not a valid comparison; presumably, the difference is the "handling" portion.

I'm not saying anything about the justifyability of the handling charge; I'm merely pointing out that there are two portions to that charge, rather than it being just a reflection of UPS rates.

Andy Ulrich

>

I don't know Blake...

I think Deceptive is a stretch as well and also unfair.

How are they deceiving anyone?

To put this to rest, the proper choice of words, if any, are maybe...

Unfair?

Unreasonable?

Excessive?

Like I said...if the price of the radio plus shipping is the BEST
price going, then buy from CEI.

If these shipping costs wreak havoc with your conscience, then buy
from another vendor and pay more...

Your choice.

Dan

In the state of Virginia, there are signs posted as you enter the
state that Radar Detectors are illegal.

No, you won't find this sign on all the back road entrances in to the
state. However, if you entered the state via a back road approach,
chances are you know your way around enough that you've been there
before and you know the driving laws there...

Has anyone utilized the CTCSS connector on the PRO-2045 to tap the baseband audio? It would seem this is the better way to do so, however, my question is to those that have done this: What size capacitor and resistor did you install prior to the data slicer (hamcom interface)? I want to install these within the case of the scanner and thought I'd solicit opinions before making the mod.

Thanks!

Charles

I challenge you to prove this. From everything I've ever heard, this
is urban myth. Yes, it was on TV that a bunch of cops in one town got
testicular cancer while doing speed traps. What the TV program DID
NOT say was that thousands of other cops did exactly what these guys
did and had no such problems. Further, these cops all worked in the
same area. They could all have been exposed to another totally
unrelated environmental toxin.

Ask any physics professor, ask any doctor, ask any biologist, ask
anyone who studies this stuff: The One and only known effect of
microwave radiation is localized heating. Everything else is just
conjecture. The remaining effects of microwave radiation, if there
are any, are so small that in our national population the
statisticians are grasping at statistical noise to prove any
correlations.

Don't believe everything you see on TV.

>And, if your car is very sleek, the license plate may be the only thing
>he will get a hit off of. Think in terms of stealth planes and how they
>either absorb radar, or they deflect it back at angles which will not
>allow the radar to return to the sender.

I doubt it. You'd have to tilt the license plate so far that you'd
get pulled over pretty quickly for improper installation. Radar
reflections are not easy for the average joe to model. The edge of
the license plate itself may actually reflect more than the surface.

>First thing you must do is (on a sleek car) put some washers behind the

>those surfaces so that their angles are pointed down or up rather than
>to the side or forward. Get a great detector and when on the road,
>always always use at least a hand held cb.

There are better ways of trashing police radar: For those who like to do the math, use the doppler equation with the speed of light and 10 GHZ for X band and roughly 24 GHz for K band.

This is highly illegal, so don't do this. But here's how it's done: Pulse a microwave gunnplexer it on and off 27.5 Hz times the speed in MPH that you want the cop to see (assuming X band, of course) . Use a 555 counter. It will work. How do I know? Once upon a time I worked at the Naval Research Lab Electronic Warfare Division. This will create a tone in the front end of the cop's radar gun. The tone will go to the doppler counter and override the tone from his/her reflected signal. It will work ok until you reach what is called the radar burn through zone at which point the reflection is stronger than your directional signal.

Those are the facts. Look them up if you don't believe this post.

Oops -- had an extra "comparing" in there ... here's how it should have
read:

FWIW, CEI charges a "shipping and handling" charge, so just calling it
"shipping" and comparing it to UPS rates is probably not a valid comparison;
presumably, the difference is the "handling" portion.

I'm not saying anything about the justifyability of the handling charge; I'm
merely pointing out that there are two portions to that charge, rather than
it being just a reflection of UPS rates.

No, Cliff, as I stated in my original posting, 97.403 applies ONLY to "these rules," that is Subpart E entitled Providing Emergency Communications. It does NOT allow operation outside amateur bands, and it requires that normal communications be out of service due to natural disaster before "Out of class" operating priveledges apply. Note that we're not talking about the original Communications Act of 1933 - that has long since been superceded by 47CFR, which is itself regularly updated and modified.

Separate rules, NOT part of Part 97, apply to operating on the public safety frequencies in question and the issue of type acceptance. They ALL are binding!

Yes. Until recently Motorola made a small desktop box called a "Stat-alert
desktop console." (Model B1666 or B1667). You can run the tape output jack
of your scanner into this device and it will decode MDC1200 PTT-ID and
emergency data. The box has a keypad and a seven segment LED display.

I have seen these for as little as $20 and as much as $600 at hamfests. New
price was slightly under $2,000. There were several non-MDC Motorola
products that came in a box that looks almost identical. You have to be
very careful when buying one of these that you really end up with the
proper model.

Some Motorola radios can also be configured to decode as well as encode
this data. Some Maxtracs and Astro Saber/Spectras can do this.

Will,

&#65533; Welcome to PA! Everywhere PENDOT has one of those signs that they
&#65533; can program the message into like "construction ahead" has a little
&#65533; thing hanging under it or on the side. This little thing transmits a
&#65533; radar signal that triggers your radar detector.

Didn't the FCC rule these transmission to be illegal? I think I read
that somewhere else.

Charles

It's a Sony ICF-SC1PC. My local Service Merchandise stocks it hear in Troy, Michigan. It's a very capable scanner, that includes a PC (DB9 RS232) interface cable, and CD-ROM with Win3.x/Win95/98/(and sort of WinNT) software, that allows you to program, and control the scanner! The CD also includes PerCon's Spectrum FCC frequency database, of over three million records nation wide! Cellular is blocked out, of course.

I purchased my 235xlt from CEI,and was well aware of shipping
costs.Yes they charge high shipping rates,but they DO NOT hide
their rates.I also got the case and headphones.While I agree the
headphones are of low quality,they are worth the $12.The case is
of very good quality with a safety release.At least that is what mine
was.It is MUCH nicer than the R.S. case for $20.By the way I bought a
second 235/case but did not get the headphones.I f they hid all of the
things you said they did,you must have found another website than the
one I found.

Sooo, should I buy a scanner now to monitor the local Ericsson system the
Dubuque police installed...and have it modified for $90 to eliminate the beeps
(but still not having a tracking system) or should I wait to see what RS or
Uniden have in mind for us.

Anybody have any inside dope?

I was wondering if anyone has used the Radio Shack mobile "cellular look-alike" glass-mount scanner antenna (20-011). It has the frequency coverage that I'm looking for without appearing too obtrusive.

Please post any experiences or comments in this newsgroup. Any help is appeciated.

Thanks.

Alan

Well, in response to all the postings, and of course,
with business advise from a self proclaimed
"industry leader", I have decided to go into
business selling scanners.

ANY NEW SCANNER MADE, ONLY $10.00 EACH!!!!!!!

ANY OF THEM!

Any manufacturer, any model, etc! Even any Two Way radio!*

$10.00 EACH!!!!!!

Take for instance, a BC 235 XLT. YOUR PRICE $10.00!!!!!!**

In fact, we will GIVE you, FREE, a headset, and leather case, FREE!***

In fact, look at some of the benefits we offer,

62 day, no hassle return policy! Your purchase price will be refunded
gladly. In fact, we will double return! If you are not happy, we
will send you a check for $20.00!

HUGE inventory! (Does anyone say they have a small inventory?)

NEW merchandise!

Same day shipping in most cases! (Well, that does improve cashflow)

Insured shipping!

Signature required!

On line tracking! (Well, Duh. UPS and FEDEX offer this to everyone)

Credit! Our credit manager is Helen Waite. If you need credit, go to
helen waite.

No minimum!

No hassle refunds! (Do you think I am crazy?)

Same day delivery in some cases! (If you pick it up here, or pay me
enough, and I will deliver it to you personally!)

GSA pricing! (If you really want to pay too much)

Walk-in/pickup! (I might ask you to feed the cows while you are here)

200 car parking, and semi rig parking! (More in the other pastures!)

And our terrorism/Emergency Operations Center is always available. (If you call late at night, you might have to repeat your message a few times until I wake up)

We offer farm grade AC power, acres of area for uplinks, downlinks, and football games. We do ask that you call first, so that we can move the cows to another field. We even have a hardened tornado proof, nuclear attack bunker available. (We took an old school bus, covered the windows, and buried it for a shelter)

Our facility has been inspected by representives of FEMA, SEMA, local government, state government, and a bunch of friends. It meets, or exceeds all applicable state and federal regulations for a facility of it's type.

*With applicable shipping and handling fees
**With a $200.00 shipping and handling fee
***With a $100.00 shipping and handling fee

From: rjlasky@ibm.net
Message-ID: <35ea350b.5599272@news-s01.ny.us.ibm.net>
Source record: 145704

I have downloaded the "Radio Manager" v3.8 Software demo. The demo version seems to control my AOR 8000 fairly well but not all features are enabled in the demo obviously.

Question: Are you - or others - using it? Does it have a good reputation?

It seems like the $40 is a pretty fair cost/performance breakpoint.

I want to enter, manage, upload, download, bandplan and custom load the radio for maximum utilization. I like being able to enter freq's and notes and labels for the radio, I want to change the bandplan that is in the radio, I want to be able to load all kinds of freq's and label them and upload them to the various banks.

Any cautions with this software? Any negative stories? Any Praises?

Thank you for your opinion - Ray

Ken,
I have to wonder about a CEO who has time to argue with a bunch of anonymous nuts on the internet (me included - but I don't have anything better to do). It's Sunday, why are you here? Anybody with half a brain can see the nutball posts for what they are. Especially in THIS NG, given recent history as to what a few imbalanced individuals can do when they choose to pursue a visible target with a vengance, I have to wonder why you are writing multipage responses to a guy who doesn't seem smart enough to dial your phone number. Let alone make up a good story. The problem is, you will flush out people who aren't stupid & reaching & obviously making things up - people who just want a good arguement. Like me & some of the others jumping in here.
Now I will say this (and I'll say it only once):
I don't hide markup in my "Shipping & Handling" charges when I sell something. Whether the extra profit was to support an "Emergency Operations Center", an orphanage or cancer research. I just don't do that while advertizing to retail customers and expect everyone to love it. Places like Fingerhut do it too, to cover their "easy credit" defaults. But that's just me and I ain't nobody. I also wouldn't advertize "free" accessories and then charge $12 to include them in a box I had ALREADY BEEN PAID $18 to pack & ship. This is all right there in the ad. (All accessories go for ONE $12 tack-on, right?)
By the way, do you charge the $18 "shipping and handling" per unit to those emergency customers who are so desparate they come and pick things up in person? And do you charge $18 per unit when you ship cases and cases of product by truck to your many bulk customers? Come to think of it why DO you bother with these pesky, complaining retail customers anyway? And why are you on HERE slugging it out with us? I'd be on the phone with those big Government customers selling radios 600 at a time! I'd be out taking some big wig to a baseball game or something like that.
Now a cynic would say you get people on the phone by listing lower prices than anybody else and then a large percentage will get to the $18 shipping fee and never know what hit them. And the ones who don't choke on the $18 will never notice the "free" stuff costs an extra $12 to have it thrown in the box. But that would be a cynic. I'm a positive thinker myself.
You know you ought to check into doing some volume with the Post Office, instead of charging double for it. They'd come and pick up your packages just like UPS. Hard to believe they don't do it now, since you sell all that volume to the Federal Government & they surely specify U.S. Postal Service for shipping......
But you really shouldn't waste your valuable time arguing with me or

anybody else. Unless you think everyone on the 'net is pretty stupid & will swallow a stupid story like the one that started this thread. Surely you don't think that.

4468. ### WARNING ##### Copper Elctronics is unsecure when entering credit card info

Newsgroup: rec.radio.scanner
Date: 1998-08-31 00:00:00 UTC
From: roy@esp.bellcore.com
Message-ID: <35ea4f11.136719885@froot.cc.bellcore.com>
Source record: 145707
Cross-posted to: alt.radio.scanner,rec.radio.cb,rec.radio.scanner

Sir

Your server is unsecured yet you advertise it as secured when putting in a credit card #. The server that this information is being sent to is secure, but your server at the instance of me putting in my card# is not.

You can verify this your self. If the page where I entered my credit information was secured, the url would start with https://. Notice the "s" after http. also on the more recent version of netscape navigator, there's a little icon of a lock on the lower left hand side of the browser. On your data entry page it is open. Once it's been submitted and sent to the secure server it is closed.

To protect fellow cyber buyers I'm going to post a copy of this to rec.radio.cb, rec.radio.scanners and alt.radio.scanners. You may post there when the situation is corrected .

Regards

Roy Harrison

4469. Constant volume, does it work?

Newsgroup: rec.radio.scanner
Date: 1998-08-31 00:00:00 UTC

A while back there was a discussion of this device:

The ALC245M Automatic Volume Controller will keep your transceiver or scanner's volume constant from a whisper to a scream. $22.95 S&H $5. Other models also available. FREE BROCHURE. C&S Electronics, P.O. Box 2142, Norwalk, CT 06852-2142. Phone: 203-866-3208 Fax: 203-854-5036. E-mail: CANDSELECT@worldnet.att.net

Has anyone tried it since then?
Does it work as claimed?
How do you hook it up? To the headphone jack?
How big is it?
Does it require power/battery?
Would you recommend it?

That does not surprise me. On some pay phones here in orlando, there is a
sticker on it with a warning to "drug dealers" about the possibility of
the calls being recorded. etc. Not sure if it is true though. The sticker
nearest me is no longer on the phone.

> was the only year that RadioShack charged for the catalog at the RadioShack
> store. After that they have a policy that the exchange of name and address
> information for the mailing list was a fair price for the catalog.

If the latter is true, then why did I never receive anything from them? I once was stupid enough to give them my name and address when I spent a couple hundred of dollars that day. No free catalog, no mailing.

Besides, it's really not wise to give RS your name and address for the very simple reason that they are dumb enough to print your name on the receipt. When you pay by charge card and loose the receipt then a mean spirited finder can make some nice purchases over the phone or internet. All they need is name, credit card number and expiration date.

> Use what money to plant trees? The money that they earn from the sale of the
> catalogs? They don't make any money directly from the sale of catalogs.

Yes, the money for they get for the catalog. I think it would be a fair trade to give mother nature some trees back in exchange for sales.

> In
> fact the costs of the catalog are a lot greater than the profits made from
> selling them even if everyone produced were purchased.

That's an often used argument, which is not true of course. If the catalogs would not help the sales, then I'm sure RS would not be investing in them. If they really give them away to be nice to their customers, don't you think that's because they want to see the customer return to their store?

> If you are concerned
> for our environment then take your old NiCd batteries to them to be
> recycled.

I tried that, they refused to take them.

You would have to try EVERY FREQUENCY before LEGALLY using the radio to
contact the police.

You may only contact the police ON THE RADIO **IF** there is life in danger,
AND you are a validly licensed amateur operator, AND you've tried EVERY
other type of communication, in this case, every frequency on every
transmitter.

You would have to try EVERY FREQUENCY before LEGALLY using the radio to
contact the police.

You may only contact the police ON THE RADIO **IF** there is life in danger,
AND you are a validly licensed amateur operator, AND you've tried EVERY
other type of communication, in this case, every frequency on every
transmitter.

I don't know when the first CW transmitters were used, but I do know that
CW didn't become routine for amateurs until the mid-1920s.

>I am pretty sketchy on the alternator method of generating CW, and had not
>realized that this was actual CW. I thought the first use of CW followed the
>inventon of the triode.

Yeah, the alternators produced CW. They were multipole, so they didn't have
to turn at the cycle rate, but of course it was still pretty low frequency stuff,
and was used primarily by commercial stations. Amateurs operating on 200
meters and down had to wait for vacuum tubes to become cheap and powerful
enough to let them operate CW. That started to happen after WWI.

Since it is a dual conversion scanner and cell images are
readily available, then it is usually not worth trying to work on a
"virtual downconversion" mod for any cellular reception. Uniden's are
prone to be programmed in 12.5kHz steps in the cell bands anyways and
the SC model isn't high-end enough to allow changes in the step sizes.
One of the modifications that you can do to this scanner is to
tap the discriminator output. There were detailed instructions in the
March 1997 edition of Popular Electronics. If you weren't lucky enough
to have this on hand then you can go to
http://www.cylexinc.com/rmpe01h.htm and grab you a copy of it and
print it out.

The frequencies are licensed and listed in Police Call. Use the freqs
that are listed for the repeater sites that are in Kent County. I live
in South Jersey and can only receive New Castle Co. system.

I have not heard any analog communication on the NCC system. It's all
digital. In new Castle Co., DSP, NCCPD, and Fireboard are using the
system in digital mode.

Until a Trunk Tracker hits the market that can receive APCO25 voice,
the 800 transmissions will remain unmonitorable unless you own a
Motorola Astro radio. With the Astro and Motorola RSS software (both
can be purchased from Motorola legally), The radio can be programmed
conventinally using the Digital CSQ (digital carrier squelch) mode to
receive the digital voice transmissions. Granted the radio will not
trunk and follow the conversations, at least you will be able to hear
them.

Read what you wrote. It's silly on the surface. Even assuming that you
meant to say "a contact on one frequency does constitute a singular form
of communication" it's silly, as the FCC itself could not specify types
of communication such as A3A without a frequency attached.

To my knowledge, Karl is no more a lawyer than I am. The way it was explained to me, "these rules" in that context means 47 CFR 97. And yes, it was explained to me by a lawyer, who led me to believe that "this section" or "this Subpart" would have been used if only Subpart E was meant.

Text of the citation:

There are many instances where hams have used modified
HT's to contact police on *their* frequencies. In most cases,
the ham's HT is almost always confiscated and he/she is
charged with violating the laws applicable to transmitting on
their freqs. After many hoops and dodges, the charges are
dropped and the HT is returned because the ham *really* didn't
violate any laws. However; it should be noted the one should
always try to use *legitimate* means first, and transmit on *their*
frequencies as a last resort - you may cause more harm than
good. Of course, with the new trunking systems, I'm not sure
it would do you any good now anyway.

> How's that?

Poor. The first one says the writer thinks he recalls a case where the
ham might have been prosecuted, and the rest go downhill from there.

The Southern California Emergency Response Institute, a conference with valuable information for emergency responders in government, business, industry and volunteer service, will be held October 10-11, 1998, at the Ben Clark Training Center, March Air Force Base, Riverside, California.

Seminars, forums, exhibits and demonstrations are all a part of the Institute, which has been held for the past several years in Northern California, but is for the first time being held in a location convenient to Southern Californians.

Registration is $35 for both days; accomodations are available on-site or locally. ERI is sponsored by the State of California Governor's Office of Emergency Services Auxiliary Communications Service, and by the Riverside County Fire Department Radio Amateur Civil Emergency Service.

Further information and registration forms can be obtained from the web site: <http://www.qsl.net.races/eri/>.

http://x11.dejanews.com/getdoc.xp?AN=384661544&CONTEXT=904659991.95223835&hi
> tnum=9

A story from someone about "someone" that he thinks called the police
over "soemthing" and he thinks was prosecuted by the feds. It may have
been 15 years ago. I could make up a story like that. Would it be
fact?

http://x11.dejanews.com/getdoc.xp?AN=383365056&CONTEXT=904659991.95223835&hi
> tnum=10

This one sounds like the southern CA case. Apparently that ham did not
make a reasonable attempt to try something else first. And he was NOT
prosecuted. The story goes that he avoided prosecution by surrendering
his radio - I wonder what would have happened should he have chose to
take a chance in court, and if the local authoirties would have taken it
that far.?

No prosecution.

> http://x11.dejanews.com/getdoc.xp?AN=383370857&CONTEXT=904659991.95223835&hi
> tnum=20

Another story like yours that just says "it happens all the time".

>http://x11.dejanews.com/getdoc.xp?AN=383551810&CONTEXT=904659991.95223835&hi
> tnum=26

Not even close to an example someone someone being prosecuted.

http://x11.dejanews.com/getdoc.xp?AN=383596445&CONTEXT=904659991.95223835&hi
> tnum=27

An irrelavant story about a fireman that stole some 800 MHz gear.

> Other good article:
> http://x11.dejanews.com/getdoc.xp?AN=384002764.1&CONTEXT=904659991.95223835&
> hitnum=25

Great article - but it doesn't support your position.

> How's that?

Well Ry - it sucked. Any idiot could have told DejaNews to search for
the word "prosecuted" in a newsgroups and come up with a list of posts.
But if you want to use them make a point you should read them first.

Regards

Ditto here, it is a good antenna for 800mhz, about the best performance
I've seen for a rubber duck. A little pricey though, but worth it.
It is a long antenna, about 2.5 inches longer than the stock antenna on
the handheld trunktrackers.
However if you are having a "real tough time" hearing the data channel
then even this antenna may not be enough for a constant lock. Its good,
but not a miracle worker. An outdoor 800mhz antenna with high quality
coax would be your next step. :-)

>heard that N connectors are better. Should I use 75 or 50 ohm cable?
>If I use the "wrong" impedence cable must I match it to the reciever for
>the best sensitivity

PL259's and SO2239's are cheap...that's why you see so many. Generally
they're fine for most scanning.
The N connector is great but few radios come with an N connector on it...you
could always install one yourself.

BNCs are better than the 259/239...

If you're seeking to extract every mV from your antenna, then N connector is
your choice and YES, match the impedence of your antenna to your load with
low loss cable..RG8U or RG8M....

It's easy to go nuts over loss. If you're doing moon bounce or weak signal
EME, sure, N connectors, hardline,preamps etc are quite necessary.. but for
the average scanner listener it is not.

Thanks, but I think my problem is with the scanner that I have. My PRO-29 has been blocked from those freq.s that you mentioned. As of right now, I can mostly get only mobiles and sometimes only one side since I only get rages like : 851-868 and 896-956 MHz... know of any mods. I can make so I can get the blocked freqs.?

As for the laws here in Canada, I know that they allow you to listen, but recording or repeating what you hear is illegal.

Thanks again...

Baba Baba Baba Booey wrote in message <6sh8vhshj2@news.bconnex.net>...
On Mon, 31 Aug 1998 18:51:47 -0700, <me_fitz@iname.com> babbled on about cell phones proclaiming:

>Can anyone recommend a good FAQ on listening to cells and/or a cell channel
>guide fro Vancouver BC?

Because I'm in Ontario I can't help too much. What I can say just off hand is:

-the band plan is the same across Canada and the United States - don't know about other places.

-I don't know how the Trunk Tracker works, but if you don't have it (I don't) following conversations will be tricky

-wide FM mode is required

-*IMPORTANT* Don't listen to the know-nothing yahoos who tell you it's "illegal". It is not. Not in Canada. It is in the United States so they have to listen at their own risk. Their laws, particularly the infamous ECPA (Electronic Communications Privacy Act) are NOT binding on us as Canadians. Don't let anybody tell you otherwise. There's nothing illegal if you live in Canada, with MAYBE the exception of Manitoba. Apparently the Manitoba Highway Traffic Act has a thing against using a scanner in your vehicle in that province only - contrary to federal law (IMHO) but enforced nevertheless from what I hear.

-Search these in 30 khz increments, FM wide mode:

Cantel: 824.040-834.990 (mobile) 869.040-879.990 (base)
Bell: 835.020-844.980 (mobile) 880.020-889.980 (base)
Cantel: 845.010-846.480 (mobile) 890.010-891.480 (base)
Bell: 846.510-848.970 (mobile) 891.510-893.970 (base)

(if these figures are wrong I'd appreciate correction)

> Jake Brodsky, AB3A mailto:frussle@erols.com
> "Beware of the massive impossible!"
133.0 was replaced with 125.525. However the troopers can be heard on
44.74 in the Baltimore area. Here is the freq list from a list in a
small book RMNM sold about 2 years ago, it's still valid insofar as I
know;
In addition to 44.74...
47.66 Patient status from Medevacs
123.025 common helo
122.75 air to air between helos and other small aircraft.
I'd say stick with 44.74; I hear the 'Troopers' quite frequently.
By the way, 133.0 and 126.75 just relay tower transmissions; you will
not hear any aircraft replying on these freqs. You will hear them on
the 125.525 frequency. I live 15 mins from BWI, so I sorta have a front
row seat. 73s Mike ka3jjz@erols.com

Do they work? Well, most are bullshit. But there are jammers that do work
However, the ones that are 'commercial' and work are easily detected by
the new radar guns. I saw one display that actually had indicators for
'JAM' and 'RF'. (I believe 'RF' indicateded RF interference.)

As to jammers, I posted an article a long time ago (early 1980's) called
"The HitchHikers Guide to Radar Jamming" that I've been told is STILL
floating around on archives and won't die. It basically tells that MOST of
the 'jamming' stories are pure bullshit, and it tells how jamming CAN
be done easily. But be aware, this is EXACTLY how the new guns
DETECT that they are being jammed, and you want to piss off a cop?

Yes, there ARE methods of jamming that are NOT detectable, but only
because they are not commercially available. Think about it. If a company
makes a 'jammer' and they advertise it, how effective can it really be?
Are people THAT STUPID? I guess! And if by chance it actually IS
effective, how long will it STAY effective?

Hey, the private 'one up' jammers that use different technology are out
there, but you WON'T find them in the catalogs!

Mike

4523. Need Help With BearCat 210 scanner!!!

Newsgroup: rec.radio.scanner

I bought a $10 Antenna and I asked for a catalogue, no charge. I believe
it is up to the discretion of the individual.

Jake,

I agree with everything that you said, almost. I would not be so quick to rule out "fish finders" as a jamming source. I agree that the acoustic nature of the "FF" would not cause a problem for radar. What about electromagnetic radiation from the circuitry? Consider the neon bulb on the spinning disk of many economy models. That bulb fires several hundred times per second. I'll bet that puts out broad band noise at a stable rate. Just food for thought.

Dick

To Alleycat

I take it you are from Canada well so am I.

The simply answer to your question (if I understand it) is : IGNORANCE OF THE LAW IS NO EXCUSE. This can be found in section 19 of The Criminal Code of Canada.

As far as what is expected of tourists my response is driving is a privilege. There is an implicit understanding that when someone goes for the drivers licence that they will take on the responsibilty of knowing what the laws are regardless of they drive. If a person fails in their responsibility then they open themselves up to a conviction.

As a note while ignorance is not a defence it can be help in having the penalty (eg. fine) reduced. So while a conviction is still registered there maybe no fine.

> flatly and without qualification. It specifically says that Part 97
> does not apply to ANY form of radiocommunication in an emergency.

That's EXACTLY how I read that rule also.

The rule doesn't say someone can transmit out of band and it doesn't
say they can't. And if they decide to transmit out of band, then
whatever law get's thrown at them, it will not be a Rule 97
violation. So when they try to defend yourself, they needn't even
bother mentioning that you hold an amateur radio license, it won't
affect their case either one way or the other.

Hams have no better or worse rights than someone with no license,
when it comes to helping in an emergency by transmitting out of the
ham bands. But they may have have far more to lose if it's the FCC
who comes after them for violating the rules of another FCC Chapter.

You had better check on things before you take a scanner into Mexico.
I never confirmed this, but I was told that scanners are illegal in
Mexico...period! If this wasn't the case, I would suspect that more
scanners would be brought in through Mexico than are shipped from the
UK, Canada, etc. I talked to some Radio Shack places in Mexico and
they told me that they don't have scanners for sale due to the laws. I
don't know where to check, but before I would cross the border, I
would definately have an answer.

I really like my BC3000xlt. Its fast, has a good amount of channels
with 20 banks..(easy to group things better). Good reception and
coverage. Easy to read display and several keypad enhancements. I have
my BC3000xlt set up so I can download frequencies from my computer to
the scanner with the PROgramit interface. It works fair right
now...software enhancements with PROgramit will help in the future.
The scanner is a bit big. It has a feel of a BC200xlt while I perfer
the feel of a BC230xlt or BC235xlt. It doesn't have trunktracking, but
there are rumors...but just don't bank on that though.

The cheapest
are around 60 dollars to the AR5000 which is 1,500 bucks.

Since I can't seem to find a better place to ask this question, does anyone know the standard tone frequencies for Motorolla Keynote Pagers? We have been operating on custom frequencies and because of some problems with some pagers not going off when they are supposed to, we were told to try to switch from custom frequencies to standard frequencies. I am not the one that will be changing the encoder, but I'm the one that programs the pagers. We use a two-tone Keynote system. Thanks to anyone who can steer me in the right direction.

Most people you deal with are honest. I have made several deals on the internet and sent them a money order with no problems.

However, Right now, I have purchased a scanner from someone on the internet with a money order and he has yet to send it. He won't answer my emails or phone calls. I am getting ready to contact the postal inspectors. Of course it will probably months before I see or hear anything.

OK! How's this for a workable plan: Ask the seller where the nearest Mailbox Etc. or similar franchise-mailing outfit is to him and get the address and telephone number of that particular Mailbox. Call the owner/manager of the Mailbox and tell him/her that you will be sending him a check/certified check/money order to Joe Blow and that Joe Blow will be dropping off a radio. Say, "Don't give Joe Blow the check unless he gives you a radio." Okay, now Joe Blow goes to the Mailbox, gives the guy the radio and gets the check. He also gives the Mailbox guy a few bucks for packing and shipping the radio, which the Mailbox guy does. Sounds like a good plan. The only problem is that Joe Blow may have lied about the condition or quality of the radio, but at least he can't screw you **completely**. Actually, if you buy a scanner from a regular poster here, I'll bet that you will be satisfied. Bad news about bad characters travels fast. I have sold 5-6-7 scanners in the past 4-5 years and no one has ever said that it was not what I said it was... There are a lot of us here just like that.

I'm looking to install a RS discone antenna in my attic and could use some help with the variety of cables and connectors available. I see that the PL-259/SO-239 combination seems pretty popular but I have also heard that N connectors are better. Should I use 75 or 50 ohm cable? If I use the "wrong" impedence cable must I match it to the reciever for the best sensitivity? If I want to install a second antenna can I get away with a simple splitter? Thanx for any help that can be provided.

What type of actions can you take when a scanner is not sent if you sent the money order.? Is there anyway to ensure that you will get your money back or get the scanner? What will the postal be able to do about it.

Good question. All I know to do is contact the local postal inspector.
They can tell you if there have been any complaints about this person. Then
I guess they investigate. There are no guarantees. You are going to be
taking a risk either way.

Yes, but it was way before my time ;-) It hasn't been available from Motorola for years. You may have better luck finding equipment based on one of the European 5/6 tone schemes such as Select 5, ZVEI, CCIR, etc.

This is from http://www.strongsignals.net/htm/new_user.htm

Trunked Radio Systems
To put it simply, trunking is a term that refers to a multi-frequency, computer-controlled radio system. At any one time, one of the frequencies in the system is used to continuously broadcast digital data that is used to control the portable radios in the field. This frequency is referred to as the control channel. The remaining channels(frequencies) are used for voice and other traffic. There can be as few as 5 or as many as 29 channels(frequencies) in the system.

Since the system is computer-controlled, it can select the frequency that is used for each transmission without burdening the radio user with having to select a physical frequency to transmit on. Due to this mode of operation it is possible to have a single conversation take place on several different frequencies. Each time the radio transmitter button is pressed, the computer selects an empty channel and uses the control channel to tell the radio which physical frequency to use. Using a conventional scanner, you can see how this form of "frequency hopping" can make very busy systems nearly impossible to monitor.

More and more public safety systems are moving to 800MHz trunked systems. The ideal case for monitoring such a system would be to buy a Uniden TrunkTracker. TrunkTrackers are specifically designed to follow Motorola designed 800MHz trunked systems by monitoring the control channel allowing it to tune to the directed frequency thereby allowing you to follow entire conversations without having to bother with manual frequency selection.

However, if you only have a conventional scanner there are some tips you can use to monitor trunked systems more efficiently. First off, you'll need to program the radio with all the frequencies for the trunked system you want to listen to. Only program the frequencies that are over 850MHz (the ones below this are the low-power splits used by the handhelds which you would need to be very close to to hear). Program the frequencies from highest to lowest and if your scanner has a delay capability, make sure that it is off or turned off for each programmed channel. You'll next need to find the control channel and lock it out since it is of no use to us since it is digital computer data. You'll probably find that there are multiple frequencies used for the control channel and that they rotate around at preset times during the day. When the control channel does switch to another frequency simply lock out the new frequency and unlock the old. When monitoring an important conversation, be ready to press the Scan button.

Should the computer switch the conversation to another frequency(usually as radios are keyed and unkeyed for transmitting), you might have to skip over several other active frequencies to find the rest of the conversation you were following.

There are several different manufacturers of trunked radio systems but the worst are probably made by Ericson and GE, from a scanner listener's point of view that is. To discourage listeners from monitoring their systems, the designers added an obnoxious set of noises each time the transmitter is unkeyed. While these noises are being sent out, the computer is switching the conversation to another channel while your scanner is left listening to these noises. If you don't act quick enough, you'll miss the reply on the new frequency. Over the long term, this is suppossed to frustrate you and discourage you from listening in since it is such a hassle. Luckily for us, there exists today a piece of hardware that can be installed in some scanners which allows it to detect the unkeyed transmitter. This detection allows the scanner to resume scanning for you thereby ignoring the noises and helping you to locate the frequency that the conversation moved to. For more info, contact Scanner Master or the Ham Station about the G/Wiz board.

While the RS unit is made by Uniden there was a small note in Monitoring Times
a month or two ago that said Uniden had specifically said they have no plans to
market a mobile TT under their own name. Since a Uniden spokesman once told me
that a Uniden TT was their most requested item I can only guess that by selling
Tandy exclusive marketing rights they were able to charge big bucks.

Scott,

Maybe I've just been lucky, but so far I've always sent a money order and asked that the merchandise be shipped at the same time and I've not had a problem. Usually I'm willing to pay the extra for overnight, and I always find out where the person works and get a work telephone number. I don't think I'd ship to someone who wouldn't give me that info.

To the person who I sent some info to on the schematics for an audio activated relay circuit.

I have lost your contact info.

I have been trying to re-construct the circuits as I gave them to you in the schematics, and have not been successful.

I have since, re-designed it, and have a working mock-up on a bread board at my work.

I you contact me with your info, I will mail you the new design, which I feel is better.

I was wondering if anyone knew of any freq download software for the Pro-64 that is free? I know Programmit and Radio Manager are popular, but I do not need any of the advanced options. Would it be possible to do it with some kind of Excel macro? (Somebody help me out, I'm in over my head)

Message-ID: <35ec7065.589290@news.supernews.com>
Source record: 145566

A Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use it any more, I've got enough radios already so $250 or best offer takes it. low ball offers will be ignored, if you know what this is you know what it's worth. I also have a friends pro 60 now, he'd like $150 obo and its in good shape.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy.
By the way I have the radio shack service manual
I'll throw in with the deal, and I have the original box and packing too if that excites any one. I had the owners manual but it's been swallowed in the house some where.

>Not to honest to me.

Excessive? Ridiculous? Yes.... Dishonest? NO.

How many dealers, other then maybe, Grove, offer a 30 day
unconditional money back gaurantee....NO re-stocking fee?

Have you checked out Grove's prices lately? The pricing is where
Grove covers those costs. At CEI, they are covered in the S & h fee.
Same thing, different name. I'd rather pay CEI's prices with the S& H
then Grove's any day.

Despite the 10 dollar fee, how many radio dealers offer a price
protection policy? HHHmmm, I can't think of any other then CEI...

What is Dis-honest about telling you that if you find a product for a
LOWER price, within a certain period of time, they will match it, less
ten bucks?

I don't get it....

Dan

Actually, my choice has been to use a vendor that offers good service,
and good pricing. Sometimes I will pay more for better service,
sometimes I will go with the best price.

I have never had a problem beating CEI's prices, and their service is
no better than anyone else. Of course, I have my own anti-terrorist
team, and Emergency Operations Center, so I don't need theirs......

The higher priced shipping and handling, is simply a way to be able
to post the lower price in big bold print, and to cover themselfs when
someone makes a return. No restocking fee, as it is built into every
sale!

Just in how you look at it.

I restate myself, I am willing to sell any scanner made, for $10.00,
plus shipping and handling. I will throw in anything you want, FREE,
if you pay the shipping and handling.

What a deal!

I have a good condition Bearcat 200 XLT handheld scanner for sale.
It has been modded to open up the cellular frequencies.
The scanner is in pretty good shape. And it is the 200 channels model.

Its frequency range is:
29-29.7
29.7-50.0
50.0-54.0
118-136
136-144
144-148
148-174
406-420
420-450
450-470
470-512
806-823
849-869
894-956
and the cellular mod opens up 869-894.

The price is $150 if you pick it up. I am in Canoga Park, CA (near
Los Angeles).
If shipped, add $15 for FedEx 2nd day COD.

Thanks,
Jerry Wang
W8UPP

I have discovered my Eco charger routinely indicates the batteries are fully charged after about an hour when I know for a fact they are dead. They seem to always want to undercharge my cells on the rare occaision they do run a full cycle.

4598. WTB: Tektronix 465 service manual

Newsgroup: rec.radio.scanner
Date: 1998-09-01 00:00:00 UTC
From: "Richard L. Vecera" <vecera@ibm.net>
Message-ID: <35EB83AC.F0664588@ibm.net>
Source record: 145583

I am looking for a Tektronix 465 scope service manual in good condition.
I will settle for a 475 manual if I can't locate the 465 book.

Dick

4602. FCC License Data Sources

Newsgroup: rec.radio.scanner
Date: 1998-09-01 00:00:00 UTC
From: bill@tiktok.cse.tek.com
Message-ID: <6sg62r$64j@tiktok.cse.tek.com>

http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

Hahahahahaha I laugh in ICOM's face (the management guys, not the techs who are great) for their crap, short-sighted, profit-based policies regarding the PCR1000.
Maybe this has caught their attention...the news should have gone back all the way to Japan. :-)))))

Hi all
Currenty I own a Bearcat Handheld Trunk Tracker and love this radio. However does anyone have any information on what the latest technology or scanners that will be coming out this year. I would like to buy a base trunk tracker to keep at my
business however I don't want to jump the gun so to speak . So if anyone knows what either RS or Bearcat are going to coming out with please post to the group
Many thanks.

Might be wise to wait and see. If nothing else, you might get a
better deal on a scanner. My local agencies haven't went to
trunked systems yet so I haven't thought much about buying
a trunk tracker. I didn't know you were a scanner buff too.

Check out Ken Plotkin's scanner Page for all the information you will
ever need on the PRO-64. Ken's Load and Load64 are no frills
programs and there is a link there to Cathy De Viney's Excel
spreadsheet for managing frequencies and uploading them to the
PRO-64 as well.

That's really silly. Someone else challenged you to produce the rule that
even implies this, and I'll be waiting to see how you answer him.

Well, 97.403 does specifically say "any means of radiocommunication". So
smoke signals would probably involve a one-time transmission. :-)

I don't know what your idea of cheap is but i picked up a Bearcat 890xlt a few months back, if i remember correctly i paid 199.99 for it at a local shop that was having a sale. I think i have seen them on the net for about 220.00. It's a pretty good scanner. It's a base scanner, 200 channels, limit search, auto store, instant weather, weather alert, optional CTCSS board can be installed ($50 i think), 100 channel per second scan, Large VFO flywheel, line out jack, aux jack, covers 29-54, 108-174, 216-512 in both am and fm, 806-956 of course cellular is blocked, but it does pick up the images of cellular right above the cell band. Check out http://www.uniden.com/docs/product/prdetail.cfm?prodid=21 for a picture and some more info on it. Then you can search the web for a dealer who carries them if you like it. Hope this helps.

4613. Buying from CEi can be a bad experience: My personal experience.

Newsgroup: rec.radio.scanner

I bought an Uniden BC235XLT scanner from CEI. I had it delivered to a po box. I must say I was bothered by the $36 charge on shipping. Here is the truth though. I ended up paying $205.95 for the scanner. With other sellers I would have paid more than that. Like $230 with scanner world or something like that. Maybe less with National Electronics. Still I called then to ask what was to total charge to my credit card. I was concerned because they asked for personal info in their website order form. They asked for my social security number and my AMEX security code. I did not provide that info because I did not feel it was proper. When I called they told me shipping was $36. I was upset with that amount. I asked to cancel the order. The person that I was speaking with asked me if I wanted to talk to someone else about the problem so I would not cancel my order. She put me through with the owner or manager(Ken). He told me the additional costs were due to them having to send someone to the Post Office to send the packages using the US Mail. I can see how that can happen but $36 is a bit too much. I did not cancel my order I it arrived the Tuesday after that Friday, which was excellent. My final price was good if compared with with the final price with Scanner World. Still I was a little upset with having to pay $36 for Priority Mail. Maybe they can change that charge to a lesser amount. I wonder if it would have been $36 for each scanner if I had ordered more than one. I did not order the free stuff because I knew it would cost me too much. I guess that if you have it delivered to an address in the USA it would be ok. The scanner arrived and it was ok. The box was wet but that was the responsability of the US Mail. We are going through the raining and huracane season. I guess a plastic bag could help. I'm ok with my purchase. I only wish shipping was a little more fair.

Does anyone know if the PCR-1000 control software works with Windows NT Workstation 4.0?

Thanks.

Thorsten.

Not if you cross out the personal info REAL good, then shred it in a
paper shredder. Of course I probably wouldn't even need to cross it
out if I had a cross-cut instead of a strip-cut shredder :-). If you
live in a metro area, this is mandatory if you want to be safe from
the crankster gangsters.

Dropped by the local Shack today to pick up the latest flyer and
noticed the new 1999 catalog. The owner said he had to charge for them
because he was charged for them. I didn't get one. On the way back to
the car I thought "You probably have to pay rent for the store so why
don't you set up a turnstile and charge everyone a quarter to enter ?"

Oh well, there are probably other local stores who WON'T charge for
the catalog.

4618. KS Column 0998

Newsgroup: rec.radio.scanner
Date: 1998-09-01 00:00:00 UTC
From: Andy B <andyb@qni.com>
Message-ID: <35EBEBD1.7D02@qni.com>
Source record: 145603

Kansas Column 09-98

I don't recall the last time the column was ready on the 1st of the month, but I do remember that the earth's crust had cooled about the same time. Mark it down on the calendar if you are reading this on September 1.

My lovely and gracious wife, Lois, let me get the OPTO 535 interface board for my bargain priced PRO-2042 I bought a couple months ago. Now I'm going to pack it up in its box and put it away. Call me paranoid, or wary, or simply guilty of wanting to be prepared, but I'm going to keep the 2042/535 unit hidden away until my existing radios get so ragged around the edges that they won't work. It is entirely possible that in the coming years we might not be able to purchase radios that have the features and frequency range available on today's scanners. When that time comes, I'm going to be ready. If I had more money I would buy a few more radiosï¿½perhaps a good short-wave receiver and a TrunkTrackerï¿½and put them in the attic with the PRO-2042. (That is if I have room next to my Geiger counter, Anthrax vaccine, tin foil for the lining of my hat, and enough food and ammunition for a small army.)
Of course, the odds of all new radios being severely crippled are inversely proportional to the degree that I am prepared for the eventuality of that happening. If I put a couple of radios in my storage room today, the future will surely produce scanners that cost about 100 bucks and have tremendous frequency coverage. If I stashed away more radios the industry would no doubt come up with credit card sized scanners for 50 bucks, which provide DC to daylight coverage, and have a built in computer.
All kidding aside, I think it might be wise to squirrel away a radio or twoï¿½just in case. Radios would probably be much more valuable down the road than the tin foil, anyway. Now, on with the show.

1. How to count.
2. KHP's speed enforcement parties.
3. KDOT DPL tone
4. DEA in the KC area
5. Great Wichita talkgroup list from Wade
5.5 Wichita radio numbering system
6. Research on KS State repeater placement
7. Guess who again? More stuff from Bob for WY, JO and DG counties
8. Comtell scanners from Europeï¿½good deal?
9. BC895 & Trunker question
10. US Marshall in Wichita
11. Lawrence PD going 800

---
1. Bob from Tonganoxie had a comment about the column for August. In
that issue there was a mention of hexadecimal and decimal numbering
systems. I mentioned that we humans use decimal, or base 10, because we
have 10 fingers. Wouldn't you know it, not all humans use decimal.
Here is what Bob had to say: "There are some tribes of American Indians
in California who, before they started going to English-speaking
schools, actually used hexadecimal (base-16) counting systems. If they
still used their aboriginal systems today, they'd be natural computer
programmers!"
"And they did 'finger counting' too! Basically, instead of
counting each digit once like us, they were 'knuckle counters.' Using
the tip of the thumb on each hand as a counting 'tool,' they touched the
tips of the other fingers of the hand (numerals one through four), then
they touched the next set of knuckles down from the tip (5 through 8),
then the next set down (9 - 12) and finally the set of knuckles where
the fingers join the palm (13 - 16). "
I've been dispatching for over 16 years now, and I can remember
a bunch of times when my officers arrested guys who were using various
body parts to count. The trouble came when they got to 21.
---
2. Bob had a question about the speed enforcement swoops that KHP has
been conducting lately. I called Troop A dispatch to ask what frequency
they were using. The dispatcher I spoke with didn't know, but she is
going to do some research. Bob figures that they might be using
855.9625 or 868.8375 simplex, or perhaps some input freqs.
Bob says that the aircraft clocks vehicles and relays the info
to Troopers on the ground, who then put the "habius-gotchas" on the
offenders. Remember the old CB days with the "bear in the air?"
---
3. The next bit from Bob is the DCS (DPL) tone used by KDOT on the
simplex frequency of 855.9625. It is 565.
All the information is appreciated, Bob. Thanks.
---
4. Larry wants to pass on a good catch he made during the first week of
August. He monitored the DEA (Drug Enforcement Administration) in the
Kansas City area on 418.900. Comms included vehicles on the ground as
well as an aircraft. It sounded like it was a joint operation with
several local agencies. "Joint" operation?ï¿½must be marijuana! The
surveillance went on for several days. DEA freqs aren't busy very
often, but Larry's discovery proves that we ought to have one bank
running in the scanner all the time for such agencies.
Thanks, Larry.
---
5. Wade sent this list of talkgroups for the Wichita/Sedgwick County
trunked system. Now that we are getting quite a bit of information for
that area, I need to talk the wife into making a trip there so I can
listen in. If I tell her that there is a great craft or quilt shop in
Wichita it will be much easier than if I try to convince her to go only
for a scanner outing. Would some of you folks that live in that area

like to get together sometime? Doyle, Don, Wade, and the rest of
youï¿½whadya think? Without any further carrying on, here is Wade's list.

5808 sheriffs channel (admin??)
6000 metro transit bus dispatch
6032 Metro bus to bus radio phones
6064 metro transit
6096 animal control

Very good list, Wade. I checked it against the list in Dr.
Sm0ke's web site, and it has quite a few more talkgroups. I bet that if
the Dr. reads this, he'll add it to his site. Wink wink, nudge nudge.

5.5 Wade has additional info on Wichita PD. The next section outlines
the basic radio numbering system. Last month we had a fine contribution
of radio numbers for the Topeka area. Looking at most publications and
various computer forums for the discussion of related subjects, I notice
a general lack of radio numbering systems included in the mix. Maybe we
all should work on pinning them down and getting them into the column.
I'll start next month with some for the JO area. Read on for the
Wichita stuff.

"Each of 4 areas of the city are divided into patrol beats: North,
South, East, and West. North is divided into units 41 through 49, Head
officer is 40,supervisor is 140, commander being 204 or 4, community
policing officers have numbers like 342 or 341. East Patrol utilizes
the 30 series (31-39) for beats, and likewise 30,130, 203 or 3 are all
in charge of something. Community policing officers are numbered in the
330s. South patrol uses the 21-29(beats), 20, 120, 202, 2(in charge) and
Community policing are 320s. West patrol uses 11-19(beats) 10, 110, 102,
1(in charge). City wide, traffic units are numbered in the 400s (i.e.
435), these guys work accidents, write tickets, take radar, and lots
more. SCAT units (warrants/ gang activities/ops) are numbered in the
upper 200s (i.e. 275) and tend to operate on patrol channels. Detectives
use numbers like D124 or D45. Narcotics use 600 series IDs, U.S.
Marshals use 700 series IDs (i.e. 763), State Parole Officers, have IDs
like P42 or P67.There are some Ids being used in the 800 series (maybe

federal law enf???) If anyone has any guesses let me know. In the
County, Sheriffs Patrol use Ids like Sheriffs-24. Some officers on the
sheriffs talk group are patrol officers for outlying towns like Goddard
or Cheney and use Ids like Goddard-2. The Wichita Police now have a
great internet page that details the patrol beats with maps and info on
each area's Community Policing officers and crime statistics...well
worth visiting at www.wichitapolice.com."
---
6. Bob took the trouble to check out the 800 MHz listings in Police Call
for the state of Kansas for us. He came up with some good results. I
will insert a portion of his e-mail to me, which explains exactly what
he did/found. Here goes:
"We've seen from Dale's contributions from SW Kansas that each
KDOT tower has 3 repeaters: KHP, KDOT and EMS. In eastern Kansas most
of the listings so far just list KHP and KDOT repeaters at each site.
But each site DOES have a third repeater. Their use is unknown and the
two I've actually monitored (Olathe and Lawrence) have been used
extremely rarely. Both seem to be phone patches. I've heard both come
up with DTMF (touchtones) and ringing, but usually either no one answers
or two guys exchange two or three words and then hang up. The systems
may be intended for EMS, as in the western part of the state.
They are as follows:"
866.125 Corning
Reading
W. Mineral
866.150 Buffalo
Haddam
Lawrence
867.1625 Bennington
Bonner Spgs.
Eskridge
867.3625 Ellsworth
Paola
Severy
Troy
867.6125 Xenia
867.9125 Blue Rapids
Montrose
Olathe
Virgil
868.425 Clay Center
Huron
Parker
Sedan
868.650 Beloit
Independence
St. George
Waverly

"All KHP and KDOT repeaters have operation on the output freq.
licensed for mobiles. The third repeater at each tower only authorizes
mobile ops on the input, no simplex operation."
"Police Call also lists a number of stand-alone (non-trunked)
repeaters at sites other than the KDOT towers. These are for different
state agencies. It is usually possible to tell what those agencies are
by taking a look at the 'State of Kansas Communications Services
Directory,' which appears annually. In the back it lists every town in
Kansas that has a state agency office and the name of the office."
(Say, Bobï¿½where might a fellow come across such a directory???)

851.3625 Beloit Youth Center at Beloit (YCAB)
851.8375 Atchison YCAA
Larned YCAL
854.9625 Hutchinson probably State Fair (200 mobiles, 5 CO)
854.9875 Larned probably state mental hospital
855.4875 Hutchinson probably State Fair (200 mob., 5 control)
but possibly the penal facilities.
866.0625 Osawatomie probably state hospital, possibly prison facility.
866.225 Wichita possibly WSU (100 mob., 1 control)
866.675 Montrose probably KDOT but no input listed.
867.675 Lawrence KU PD
868.900 Statewide Temporary repeater (only 50 mobiles)

"Some of the above agencies are educated guesses from the list
of state agencies in particular towns. I suspect both listings for
Hutchinson are for the State Fair because the state penal system, which
is also well-represented in Hutch, seems to be sticking to high-band
(155.31, etc.) for the present. Only the Youth Centers seem to be
switching over. It would be nice if the group could I.D. all these
repeaters and their agencies for certain."
"That's it. It might be worthwhile putting the third repeater
frequency from your local tower in your scanner to see what kind of use
it gets. I'd appreciate any verification or reanalysis of the other,
local
stand-alone repeaters in the various communities listed above."
---
7. Here is Bob again. "Caught a couple of new freqs being tested this
a.m. 868.325 & 868.750. Just open carriers with occasional test
announcements. No ID or location but sigs were strong. One of the
freqs is allocated to Douglas Co. and the other to Wyandotte Co. But
they were being tested "together" with the same operator and beeps etc.
on both channels, so the NPSPAC listings seem maybe to have an exception
in this case. We'll see what develops."
"Also I heard a couple of units in the 1600 series talking about doing
things in Johnson Co. on the TAC freq. of 866.5125 at the same time the
other tests were going on." (1600 units is Gardnerï¿½that's MY town!)
"Any thoughts?"
Good detective work Bob. I haven't had a lot of time to do any
research on it yet. If I hear anything I'll pass it on.
---
8. Wade has this to pass on about the Comtell scanners that are

available from various European sources. "A couple of issues ago in the KS Scanner Journal, someone mentioned fullband scanner purchases from www.cbshp.com . I wanted to let you all know that I have a good friend who has purchased a fullband called the Commtel 510 for about $300.00. It has continuous coverage from 0.5 MHz to 1300 MHz. (NO GAPS). It runs on 2AA batteries and is TINY (smaller than a cigarette pack). The reception is great and batteries last a long time. The main drawback is a SLOW scanning rate. It does, however, have 10 handy one-touch programmable search bands. It arrived OK from Holland to the U.S.A. The guy from the shop was great about letting us know when it was shipped and also followed up regarding its arrival. I will probably not be purchasing anything that pricey in the near future as I am also still nursing wounds from my trunktracker purchase. (spouses)" Thanks, Wade. I had toyed with the idea a few months ago, but chickened out. Sounds like it may not have been a bad idea after all.

---

9. Now, a question from Wade. He is thinking about trying to get the Trunker program up and running at his post. We exchanged some notes about it, and he has decided that the BC 895 TrunkTracker would be the best way to go. I have not had any experience with Trunker and a BC895. I have put out a few notes to some folks that have in hopes they can give him more details. Is anyone else out there familiar with Trunker and the 895? If so, please let me know and I will have you get in contact with Wade.

---

10. More Wichita stuff from Wade. It is about the US Marshall Service. "Here's a tidbit for anyone interested in the federal scanning. U.S. Marshals in Wichita operate on two systems. They use the frequency 163.2000 early in the day (more when in the office) and alternately use talkgroups 1968 and 272 on the Wichita 800 MHz system out in the field. Occasionally they will switch back and forth between 163.2 and the 800 band system. If you don't monitor both, you're not getting the whole story. Most federal traffic is digital or encrypted in Wichita, but I have had several times when DEA and Secret Service can be heard clearly." Outstanding, Wade. Thanks again.

---

11. Bob has found that Lawrence Police Department is applying to the city commission for the bucks to install a new 800 MHz radio setup. Currently they are on highband, 158.790. According to the local newspaper, their idea is to be compatible with Douglas County's 800 MHz system. Makes sense to me! The city plans on spending about $65,000. His source also indicated that once installed, patrol would be on it right away, with detectives and admin later on. They gave the standard reasons for wanting to switch. "Better coverage, officer safety, etc." Yeahï¿½right.

Douglas County's system is not trunked, so I imagine it would be the same with Lawrence PD, too. That would make it nicer for those that didn't want to invest in a TrunkTracker or the Trunker program yet. Listen to DG County on 867.3375 and 868.050. You can hear KU PD on 867.675.

Keep us updated, Bob. Thanks.

September's column was a great one, thanks to all of you.
Actually, there was too much stuff to put in one column. I have some Trunker/Trunktracker codes for the Kansas City KS departments that I was going to use this month, but they'll wait till October. Keep the e-mail coming!

See you next month,

Andy

4619. Re: Radar jammers

Newsgroup: rec.radio.scanner

There were 2 jammers that worked on the market. The ARC Interceptor and the Stealth VRCD. Both are out of production but they worked. There's also a company called Remote Systems that sells kits for jammers.
http://www.remotesystems.com
The rest on the market don't work, if it is a passive device, it simply cannot work.

Now for the "Urban Legend" Dept.
A police officer I spoke with swore that "Fish Finders" royally messed up Ka band radar guns. I can't beleive it but in theory it would work. Cops use tuning forks to check the calibration of the device, I imagine a fish finder would be like a giant tuning fork. Anyone else heard this?

4620. MOD FOR RS PRO-60

I am a primarily bedfast disabled 67 year old catholic nun. I live in Merriam Ks., which is suburban to KansasCity Mo./Ks. I know about Police Call Mag. etc. My problem is, that the one area I most want to tune into{ Merriam,Ks.} has been automatticly blacked out some way. My scanner will not permit me to punch in frequencies in most of the 500 through some of the 600 range. When I first purchased it I could. I have a Radio Shack Pro 46. I realise this is a very green question, but we all had to begin somewhere. Is there anyone in the greater K.C. area who would be willing to assist me? Can my scanner be modified to pick-up the area I most want to listen to? Because of my disabilities I cannot come to you.Also as an indigent religious sister, my dollars are prohibative of any large expense. I spend many a night awake, and love to listen to the goings on in my area, and offer my prayers accordingly. Recently the local police gave their old scanner/ receivers to several local businesses, to help them expedite communication when they are having need of them. The police, that is. Perhaps there is an officer out there who will assist me? I can easily prove to you ,that I hope for the information etc. ,for no other reason than that stated. Thanks to all for any incoming help.
E-mail me at Sistercarole@webtv.net

From Karl Beckman:

... "97.403 applies ONLY to
"these rules," that is Subpart E entitled Providing Emergency
Communications. It does NOT allow operation outside amateur bands, and
it requires that normal communications be out of service due to natural
disaster before "Out of class" operating priveledges apply. Note that
we're not talking about the original Communications Act of 1933 - that
has long since been superceded by 47CFR, which is itself regularly
updated and modified.

Separate rules, NOT part of Part 97, apply to operating on the public
safety frequencies in question and the issue of type acceptance. They
ALL are binding!"

Rich, Part 97 states ALL FORMS OF COMMUNICATION must be attempted. This would mean repeaters, simplex, even packet/satellite/etc (if equipped), and would require trying ALL repeaters and used simplex frequencies (e.g., 6.52 and 6.55) in the area.

If nobody responds there, and you can't find a telephone or another human being, only then should you contact a PS agency -- IF you're a licensed amateur operator.

They started this a few years ago. The original idea was to charge 3 bucks
for the catalog, then include a 3 dollar coupon with the catalog towards a
purchase.

I went in one day and spent like 300 bucks on a scanner and some other stuff,
and asked for a catalog. They refused to give me one for free!! I couldn't
believe it! I tried to reason with the guy but he said that they were
considered store inventory and had to charge for them.

I just got a WinRadio 1000i scanner. I have a RS discone antenna that does a great job on the VHF/UHF bands, and I use the supplied 20' wire antenna for 20m and beyond. My question is: does anybody have any mods (either software or hardware) for this radio, are there any FTP sites containing software (besides WinRadio's sites) other than the software supplied, and does anybody have any comments in particular?

Dan

Ryan - it does not say that. It says "when normal
communications system are not available". It is not
"normal" to try every frequency, channel, PL, etc. It is
not "reasonable", which would be the true legal test, to do
so since it would cause unnecessary delay in getting help.
Each case would have it's own circustances that would have
to be weighed.

> If nobody responds there, and you can't find a telephone or another human
> being, only then should you contact a PS agency -- IF you're a licensed
> amateur operator.

Again - not true. The rules go on to say make no provision
to prevent an amateur station from using any means of
communications to attract attention and make known it's
condition. It is often interpreted that "part 97 goes out
the window if you have an emergency" - you don't need a
license to make emergency transmissions.

Once again I'll ask. You stated that people are prosecuted
under these circustances regularly - can you give us ONE
example of prosecution of an amateur that used his radio
out-of-band in a bonafide emergency. Even that guy in
Southern California was never prosecuted - the local
authorities took his radio but he was never prosecuted for
anything and the FCC took no action against his license.
And that was certainly a questionable situation. (A bonafide
emergency but it was doubtful the amateur had made a
reasonable attempt to exhaust normal amateur communications
- THAT ended up being the issue, not the simple fact that he
called the sheriff on their frequency.)

>Cops use tuning forks to check the calibration of the device, I imagine
>a fish finder would be like a giant tuning fork. Anyone else heard this?

And it is just Urban Legend. Two problems: (1) Sound waves are not
electromagnetic. (2) Tuning forks work for calibration because they
are metallic and reflect energy with enough phase modulation to cause
a beat tone in the front end of the gunnplexer. The phase modulation
beat note places a calibrated tone in the front end of the unit. This
tone will correspond with a certain speed reading. In no way does the
sound itself cause the reading of the radar to change.

On the other hand: if you could somehow get *all* the metal on your
car to vibrate in sync at some tone frequency, then you could see that
tone instead of the doppler shift tone of the echo in the police radar
unit. --But you aren't going to get that to work using just a fish
finder...

>actually it can and does cause cancer, just like EMF, microwave
>radiation can and does Cause cancer,.

Then we would all be doomed. You get more electromagnetic radiation from the LO of your scanner than you would from standing 10 feet in front of one of these radar guns.

By the way, microwave radiation isn't "just like" an electromagnetic field (EMF), it *is* an electromagnetic field.

I'm not going to tell you you're wrong. But if you're right and you were to take measures against this, then you'd have to live in a cave with no electricity for the rest of your life, and never leave it during the day time.

I can think of better ways to live...

According to the manual for my Sportcat, copyright 1994, Page 30,
Technical Specification, the Receiver Type is listed as Triple
Conversion Superhetrodyne.

For what it's worth, the nameplate on the bottom of the radio lists it
as an SC150B, FCC ID AMWUB268A, serial # 85003286, no date code.

My PRO-2004 gave it up about 2 years. I took it to Radio Shack, and about 10 days later and $30.00, it was back home with me as good as the day I bought it. I opened it up and restored the cell, and it's worked happily ever after....

Just because Motorola is discontinuing their trunked systems (can anyone confirm this?) doesn't mean every user of a Motorola trunked system will go out and buy a new one. I'm guessing that some will for support reasons, but support will still be available for a long time from third-party sources. Also, new trunked systems aren't exactly inexpensive.

Uniden will produce a scanner that scans Motorola trunked systems as long as they still exist and people have a need to listen to them.

When I sent in my 2004 a few years ago (after I blew it up doing a "repair") they replaced the board containing the diode matrix. The metal enclosure was spotwelded shut in 8 spots (2 on each side) and it took me over an hour to get it open again to restore full coverage and the extra 100 channels.

The radio continues to work well to this day, but I don't know if R/S still will repair some of these older radios, since they do not keep an inventory of some of the parts...

AFAIK there is no replacement CPU that will exclude the cellular range. They may refuse some repairs due to Owner applied enhancements, but that will depend on the individual radio and the guy who gets it.

Shannon Young wrote:
>
> 1)Is this thing any good?
> 2)How far can it pick up freq's? Almost bought one today but I wanna make sure they work
> ok.

It works OK. It's a nice cheap companion that works well and dose a fairly
average job of picking up freqs. The range depends on how powerful the other's radio
is and the noise in your area.

> 3)Or would the Opto Scout be a better buy?

Yes, the Scout is a far better counter. RS's model is designed for use by
techs on a workbench, along with most other counters. Hobbisists have found these
useful for getting others' freqs as well. But Opto's Scout is a freq counter that's
designed for hobbisists to use. It's biggest feature is it's ability to store freqs
and to interface with other scanners to instantly tune them to the freq that teh
Scout picks up.
If you have teh money for teh Scout, get it, it's far better. If you can only
afford the RS counter, it'll get the job done.
I've found that both perform about as good as the other, but the Scout's
additional features make it a far better counter.

> I'm looking for a cheap alternative to the Opto Xplorer if anyone knows of one. Basicly
> something that picks up freq's and DTMF.... Any help would be appreciated.

The Scout and other freq counters only tell you what the most powerful freq
it can detect is. They don't decode DTMF or anything else at all, and they don't
decode audio. You'll have to have a separate scanner and DTMF decoder as companions
to your counter or Scout if you want those features too.
Opto's Techtoyz DTMF decoder is a great little unit. I have one and it'll
accept up to 100v peak to peak going straight into it's input jack so you can plug it
straight into your scanner's headphone jack, and it has a built in MIc so you can use
it withotu any cables. It decodes pretty good, and I've found it reliable when both
on my belt with a cable, and when just sitting on top of my Pro-2005 without any
cables.
I recommend you get the Scout and the techtoyz DTMF decoder. These when
coupled with your scanner will do a pretty good job instead of the expensive Xplorer.

I imagine there is one, but I don't know it. I do know they're on the usual aviation radio frequencies using the call sign "Trooper." If you're curious, listen to 128.7 West of Baltimore, 133.0 North of Baltimore, 119.7 South of Baltimore and 119.0 East of Baltimore. You may also hear lots of activity on 124.55 over the Eastern Shore.

4672. RS Pro2004 repair - will they disable cellular?

Newsgroup: rec.radio.scanner
Date: 1998-09-02 00:00:00 UTC
From: mikebo@MCS.COM
Message-ID: <6sk66okkc1@Mars.mcs.net>
Source record: 145346

I have an RS PRO2004 scanner with the cellular mod. It's worked fine
for years, but evidently lightning or static finally got to it, as it
will no longer receive VHF. It receives UHF and 800Mhz fine...
I'd like to take it to RS for repair - they only charge $50 labor.

However, I have some questions:
1) Will they even touch a scanner that's been modified?
2) Will they do component-level repair, or just replace the whole board?
3) Will they re-block the cellular band?
4) Can they replace the CPU with one that won't accept the mod?

What are your expeiences in this regard?
Thanks!
- Mike

: To Alleycat

: I take it you are from Canada well so am I.

: The simply answer to your question (if I understand it) is : IGNORANCE OF
: THE LAW IS NO EXCUSE. This can be found in section 19 of The Criminal Code
: of Canada.

:
: As far as what is expected of tourists my response is driving
: is a privilege. There is an implicit understanding that when
: someone goes for the drivers licence that they will take on the
: responsibilty of knowing what the laws are regardless of they
: drive. If a person fails in their responsibility then they open
: themselves up to a conviction.

Fortunately, it's usually not quite as simplistic as that.
Ignorance may not be an excuse, but it can certainly be part of
your defense.

The answer, actually, is closer to this: when you drive outside
your home area, you are expected to behave in a reasonable manner
and in accordance with generally accepted rules of the road. The
word "reasonable" has a specific legal meaning in American law
and, I expect, in Canadian law as well. A driver is reasonably
expected to, for example, drive on the right (not the left) side
of the road, obey posted speed limits, follow traffic signs, stop
at red lights, obey the directions of a duly appointed law
enforcement officer, not drive drunk, not use your feet to steer,
etc.

However, you may not be convicted and/or fined for infractions
which you, as a stranger, could not _reasonably_ be expected to
know about -- such as a town ordinance which prohibits a right
turn on red but didn't post a sign to tell you, or chewing
tobacco while operating a motor vehicle, or some such. If the
judge doesn't agree, well, you can appeal.

: As a note while ignorance is not a defence it can be help in
: having the penalty (eg. fine) reduced. So while a conviction is
: still registered there maybe no fine.

This would be the "guilty with an explanation" portion of your
court appearance. Ignorance may not be an excuse, but it is
usually a mitigating factor.

Paul Havemann,
who regrets the need to remove 'nospam' to reply by email.

"If he can step free of legal trouble, including obstruction of
justice, Mr. Clinton can tackle the task of doing something
positive with his remaining days in office. That would involve
a full, ungrudging, verifiable explanation to the American
people about what has gone on with regard to Ms. Lewinsky and
the other matters under investigation. It should also, in our
view, include an executive order to Attorney General Janet Reno
to appoint a special counsel to look into campaign finance. A
Bill Clinton who was not burdened by secrets as to personal conduct
and who had nothing to hide on campaign money would probably

feel almost weightless..."

I have a couple of these 2026's and on the ealier model, it has the
extra orange wire that they expect you to run to B+ in order to keep
from loosing memories. I added an internal battery to the scanner and
clipped the stupid wire leading out of the case. I can't remember what
battery I used, but if you email me, I will pull the cover off and send
you the particulars. I think I did this several years ago and it has
never lost memory again and really does not spend much time plugged up
to a power source.

Well, for starters....
1) S-meter
2) Center Tune Meter
3) Extended Delay
4) Auto Tape Record Switch
5) Extended memory
6) Data-Tone Squelch
7) SCA Decoder
Basic mods from internet and the book "THE ULTIMATE SCANNER"
8) Computer interfacing
Optoelectronics OS535
http://www.optoelectronics.com/
PROgramit Interface
http://www.qsl.net/ka2pyj/
Boondog Automation ISA card interface
http://www.boondog.com/
9) Remote Control (see PROgramit's page)
There are others that can add a few features, but they don't readily
come to mind.

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA
==========

There is a growing interest in tapping the baseband audio out of various scanners for decoding of a variety of esoteric signals, including CTCSS, SCA, FSK, RTTY, FAX, etc. By and large, such signals cannot be take from TAPE REC jacks, headphone jacks, and EXT SPEAKER jacks because of the voice-band filtering that is done between the signal source and these output jacks.

Therefore, it is necessary to tap the "baseband audio" directly at the output of the discriminator chip for your scanner. The below Table shows a list of scanners, the discriminator chip(s) used in the scanner, circuit symbols of those chips, and three pins of general interest on the chips: RF-Input, Scan Control, and, of course, the baseband audio pin.

Even though your scanner may not be listed, if you can find its discriminator chip, it will be listed with one or more scanners below, the pins of which will be the same for your unlisted scanner! Corrections and additions to this list are requested. See my mail and

other addresses at the end of this file.

So mr bill, what is this?

Is this some commercial advertisement?

Is this some ad for "many units to sell?"

Is this designed to entice people to
want what you have , not knowing if
you offer a guarantee?

is this designed to whet people's
reasons for having wet dreams not
knowing how soon you "let it go"
out to us?

mr. bill, please, if you are going
to "sneak one in on us" then at least
sneak the full box of goodies you
want to have us open ....

bill conduit
etc.

4680. Digital Scanners

Newsgroup: rec.radio.scanner
Date: 1998-09-02 00:00:00 UTC
From: Tom Evert <nospam@nospam.gov>
Message-ID: <35EDABE9.6BC3441B@nospam.gov>

With alot of cities switching to digital trunked radio systems, we need to put pressure on the manufacturers to start making digital capable scanners. The only one I've seen is by AOR but isn't available yet.

Tom

Again I ask, at an "amateur station," just what equipment would be
at one's disposal? (You might want to look up the definition of
"amateur station" in Part 97 prior to answering. You won't find
any mention of out-of-band gear.)

>... to provide essential
>communication needs in connection with the immediate safety of human life
>and immediate protection of property when normal communication systems
>are not available.

"Normal communication systems" at an "amateur station:"
amateur band transceivers and telephone.

From: camper <h2oguy@mindspring.com>
Message-ID: <6skbr7cqn1@camel19.mindspring.com>
Source record: 145356

I have heard that you can not program high and low limits for the sportcat to do searches. Are these limits preset? If so, what presets are in the scanner? Is it fire, police, weather only, or will it also include buisnesses, walkie talkies, etc. Would anyone recommend this as a good scanner? Thanks for the info.

ANY scanner that allows you to program the frequencies (as opposed to inserting crystals) you buy, including ones from the pawn shop, will work in the frequency band you will probably need to monitor. You will want at least 25 channels on the scanner and a better antenna. The frequencies you need can be found at any decent scanner site. Please keep in mind that listening to telephone conversations without permission in illegal. If you did happen to overhear something and disclosed it to anyone, theoretically you could be arrested. If you would like more help just email me.

1)Is this thing any good?
2)How far can it pick up freq's? Almost bought one today but I wanna make sure they work ok.
3)Or would the Opto Scout be a better buy?
I'm looking for a cheap alternative to the Opto Xplorer if anyone knows of one. Basicly something that picks up freq's and DTMF.... Any help would be appreciated.

There is no definition of "amateur station" in Part 97. (at least in my copy dated March 19, 1996)

You also won't find mention of SWR meters, microphones, tables, chairs, CW keys, power supplies, etc. in Part 97. Is it your contention that these are not permitted to be at the disposal of an amateur station?

It might as well be discontinued. My business in Nashville, Tn uses
Motorola truncked system, and we are having to switch over to Nextel at
the end of the year because Motorola is doing away with the truncked
systems. At least that's what I heard.

The only the risk I see is accidently becoming part of the incident by the incident coming over to where you are. But as long as you are not an active participant, and you move when a dully authorized official tells you and you don't cause problem at the scene then there should be no problem.

Just remember though any active situation can quicly get out of hand even if it looks basicly under control. Trust me on this as a responder to emergency incidnets I've seen a lot of harmless looking stuff suddenly turn nasty by just forgetting about brother murphy. So in a word be careful, and do what you've said you've been doing.

If you would like to see some new software for the CE-232
hers is some info on it

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.
You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to give it a try, you can download the
program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

Since the OS456 no longer supports any sort of decoding the
only advantage I see that it has is that it can speed up your scan
speed but still will not program your scanner, and the only version
you can get will not work in your 2004 if you have one, the CE-232
will do all this and more and if you have the memory mod done on you
r 2004/5/6 you can even program them.

Some of the systems down here use Motorola systems that you will be
able to pick up with the Pro 90 (Uniden BC235XLT). Some of the other
systems (FHP) use digital trunktracking. Yet still others use
Erickson systems (Coral Gables) which the 90 will not pick up except
in normal scanning mode. Miami Beach is a Type II Motorola and City
of Miami is a type I. Pick up a copy of the South Florida Trunking
Guide from:

scannerdude@juno.com

10 bucks. That will help you out a great deal. One other note: the
Uniden model comes with an extra battery and charger that the RS unit
doesn't have. Other than that (and an attenuator function) they are
the same radio.

If everyone is upset with CEI's shipping policies simply do not buy from them! It is CEI's prerogative to charge what they feel is prudent. Conversely, it is our right to buy from any establishment that we wish. I mean if you ate in a restaurant and felt the food was not worth the money you would probably not eat there again. I choose not to buy from CEI. But that is only my opinion. If others want to shop with them so be it. Oh, BTW Ken if I ever need 600 BC-235's I might then consider calling CEI. Just my .04.

Cross-posted to: alt.radio.scanner,rec.radio.scanner

I did the switchable cell mod on my Pro-64 as described on http://www.access.digex.net/~kplotkin/ging.htm . While switched to "Cell Mod" mode, I came across some (what I think is an electric company) transmission and after each transmission are some variable tones. The frequency I get this on is 42.400 MHz, which is CHP Santa Ana Dispatch (Purple) Channel.

I recorded one of the transmissions to a .WAV format. It's probably not protocal to upload any files to this newsgroup. Anybody interested in listening to this recording and try and i.d the tones for me and/or tell me what frequency I'm really listening too? I can email the file to anyone that's interested.

Thanks,
Sam

> "these rules," that is Subpart E entitled Providing Emergency
> Communications.

Well, I'm not a lawyer *either*, but as a lawyer explained to me, if that were true they'd have said "this Subpart" or "this section" instead of "these rules". "These rules" is ambiguous, but though it might seem that it could be stretched to mean the whole of 47 CFR (FCC regs), just about any court would hold the narrowest logical interpretation, i.e. Part 97.

> It does NOT allow operation outside amateur bands, and
> it requires that normal communications be out of service due to natural
> disaster before "Out of class" operating priveledges apply.

It doesn't prohibit operation outside amateur bands, and it does say that Part 97 doesn't prohibit same under conditions of emergency. It says absolutely nothing about "natural disaster" or "operating privileges".

> Note that
> we're not talking about the original Communications Act of 1933 - that
> has long since been superceded by 47CFR, which is itself regularly
> updated and modified.

Nope again. We aren't talking about the Communications Act, true, but that Act was not superseded by 47 CFR at all and could not be superseded by anything in the Code of Federal Regulations (which basically consists of "operating manuals" for Congressionally-created government agencies, and rules by and for those agencies).

I believe it was the Act of 1934, but I'll chalk that up to key proximity.

> Separate rules, NOT part of Part 97, apply to operating on the public
> safety frequencies in question and the issue of type acceptance. They
> ALL are binding!

I said that. :-)

Hello me_fitz .....
There are an array of considerations when listening to cellular
(where its legal ..like there in Canada) .....considerations like
general scanning ...listening to (or following) the same conversation
as it hops site to site .....mapping sites to locate users ..mapping
sites to follow users .....using Banpaia DDI to identify mobile
phone numbers .....cheap and easy DDI's ...cellular activity monitors ..
(units kinda like trunking monitors ...except for cellfones) .....and
zillions of other listening interests. Do NOT use WIDE fm to listen
to cellular ..as some that posted here suggested ...they are
misinformed. Here are a few sites that can get you started ....
the Motorola Bible ..(found with-in some of these url's) is an
excallent overall text about cellular freqs and band construction.
http://radiophone.dhp.com/ DrWho's older site .....
http;//home.pacbell.net/kaliber/cellpage.html my links on cell
http://homepages.ihug.co.nz/~ugh/ DrWhos' new pages
http://www.crossbar.demon.co.uk/ ..ph.uk's home page ....

There are many more ....like IOpht and banpaia ..etc ...but
these will get you started.....

I'm sure this is all part of the push to appease the FCC/CTIA with
all scanners being triple conversion with the 60dB image rejection
specs Uniden has offered up.

Part that scares me is that the 2066 has 150 channels...just like
the PRO-91...which is the worst performing TT made thus far.

Screw you, asshole. Get a life and quit worrying about me. What, do you flame every person who asks for a cell mod? What the hell do you think a scanner is for? EAVSDROPPING DICKHEAD! I have a boss and a wife already. I don't need some two-bit self promoted airwaves marshall telling me what to do. If you don't have a useful reply to my post then shut the hell up. No one wants to listen to you lecture me. If what you have to say on a cellphone is so damn important, get 35 cents and use a payphone. That's what the cops do when they don't want to use the radio. If the cops can figure that out why the hell can't you? It's not my responsibility to ensure the confidentiality of your conversations, it's not the government's, it' YOURS!!. Why don't YOU GROW UP, get a clue and figure this out for youself.

There is a BIG difference between a logical discussion and just repeating the same meaningless nonsense over and over and over again.

Just do business with some one else if there polices don't sit with you!

It is really that simple...Did CEI or anyone else FORCE any of you to do business with them??? I don't think so.

If you have a brain and can read then you get what you get..IT"S your decision!

Enough of this... Actually it is really funny to watch some of you blowing a "nut" over this...Have fun..be happy..

After you read the "written law" I think the important thing is "installed." If I had an alarm intalled, or a radio installed, they wouldn't just leave it on the seat. It gets mounted to the dashboard which is part of the vehicle frame. So I would think, having the scanner on the seat would be fine. I usually have mine laying on the console with an antenna connected and a power lead connected. I've heard that this could also be defined as installed. I guess sometimes you just can't win. When you live in a police state, anything they want can be defined by them and for them.

I have a Pro-2026 that I use in my car. It's switched through the ignition and after a few days my freqs disappear. Apparently this scanner does not have a battery (I've looked for it). It charges a cap to keep the memory when the power is off. What a stupid design for a mobile scanner. Is there any way to wire in a battery? Or, I've been thinking of getting a mobile trunck-tracker to replace it. Any good recommendations (that has a backup battery)? I need at least 100 channels and would like to be able to dump the freqs to a computer for backup.
Thanks!

Hi Scott

Take for instance a normal walkie talkie, when the "Talk" button is pressed, the talkie is programmed to transmit on a fixed frequency, let's say, for example, 153.650... all the other talkies are also set to listen on to that frequency and will receive the transmission.

Now, with trunk tracking, the talkie (or, for that matter, the transmitting device) has several frequencies programmed in it that it can use to transmit on, and all the other talkies also have that set of frequencies preprogrammed on it to "listen" on to.

So, what decides which frequency of this set to transmit on ?
A computer. It transmts sub-audiable tones instructing all the talkies to change their listening and transmitting frequencies to another, and these signals are sent as often as a few seconds or as far as a day or two, it depends on the type of organization.

WIth a computer in control, it enables several companies to share the same trunk frequencies while the computer takes care that they don't conflict. so, while listening on your local police chasing a nutcase on the highway on 500.0Mhz (for example), the computer might instruct their talkies to jump to another frequencies, while also instructing the talkies of the construction workers across the street to start using the 500.0Mhz frequency.

So, you can either start searching all the frequencies until you find the police officer again, which is usually time consuming, or get a trunktracker which will find it for you by also utilizing the computer-generated signal that tells there talkies which frequency to go to :)

Hope that was of help.

The 210 is easy to program. I have an old 210xlt 40 channel so I hope this will help.

First you need to get some frequencies for the area you live in. You can get a starter list from this site: http://www.perconcorp.com/db_srch.htm

When you get a few frequencies for your area, turn the scanner on. hit MANUAL. Press 1 then MANUAL. This will put you on channel 1. Type in a frequency and hit the ENTER key. I then hit the DELAY key which will keep it from scanning for 2 seconds after someone transmits so you can here a response. Now hit 2 and then MANUAL. You are now on channel 2 and ready to put in a frequency for this channel. Just keep repeating the process over and over until all the channels are full.

The scanner range for the one you have doesn't cover the 800 mhz range but you will probably get stuff in the 150.0 - 156.0 range and the 450.0 and 465.0 range.

You can scan just between those ranges by hitting MANUAL then say put in 150.0 hit LIMIT then hit 157.0 and hit LIMIT now hit SEARCH. Now you can search between those frequencies for new ones.

The WX button is your local weather.

The L/O is lock out. When your scanning and you don't want to hear a channel then hit that button on that channel and it will skip over it during a scan.

Some very common frequencies that work almost everywhere:
Ambulance 155.340
Police to Police 155.370
Red Cross 42.42 - Never heard any thing on that one yet.
Other Police stuff 155.055, 155.475

I hope this helps you out. the 210 was one of my first scanners and I still use it. Good luck and if you need any more help just let me know....

Do a 5Khz spaced search on NFM from 1105 to 1125 Mhz (with a good outdoor antenna on it) and you may never think of doing mods on it again. Wink Wink nudge nudge, say no more, say no more.
However, paralleling a additional IF filter just like the originals across the two 10.7 IF filters will make the wide FM not quite SO wide & more useful for TV audio & satellite weather, though it hurts FM music fidelity a bit (like the FM broadcast band function on the 2035 is worth much in the first place....).

Joost,
In a reply to a message I recently posted, you said that
modifying the R10 was fairly simple. However, I checked your page, and
I remembered why I didn't try it before. You warn on your page that
only very experienced people should try it, as it requires sautering
down to a 3mm level. Also, I don't think that Radio Shack (the largest
electronic parts retailer in the U.S.) carries those particular
resistors, though I could be wrong. Could you straighen me out on this
one, and tell me whether it is or is not recommended for a lightweight
amateur like me to try this mod?

It's pretty hard to beat a deal like that on a 400 channel scanner.
If you haven't already done so, check out Ken Plotkin's Scanner
Page for info on the PRO-64/2041.

Lets say for example I am riding my mtn. bike down the Virginia Beach boardwalk, with my scanner, and I hear something interesting on the police channel so I decide to check it out, yet not get in the way at all (across the street). Is there any legal issues that I should be aware of? I have been doing this for sometime now with out a problem (most of the time beating the police to the 10-20) Again I am not getting in the way at all, both for my own personal safety, and respect to the officers..

Thanks for your time,

David

>Has anyone used one of these?.....or are they a waste of money?......

I have the micro counter, I also own a Opto Scout. I think the Tech Toy is worth thr $99 I paid it. The Scout performs better and is better built, but costs four times the price, also the Scout is very noticeable when freq hunting while the Micro counter is not so conspicuous. The mico counter's case is a little flimsy. Over all I'm happy with the Micro counter.

I have learned that the catalog price will be changed to $0.00 in the point of sale system at RadioShack. I would imagine this would happen as soon as the programmers can download the new price into the store's computers.

So all your complaining was heard by the powers that be at RadioShack.

Now, can you find something else to whine about?

Ho> Can anyone help me with cassett or open reel recorder mods to extend
Ho> rec time to 5 hours or so?

Use a voice activated recorder so the
tape is moving only when there is a
radio transmission occurring.

An external VOX-style relay could be
used on your existing recorder(s) if
it has a "remote" input.

Do any of those chains have a national advertising campaign that
uses the phrase "We've got answers."? When they do, we'll bash
them too (for false advertising).

>copy dated March 19, 1996)

Each part which deals with a specific radio service begins with
definitions. For the ARS, the definitions are found in S97.3.
You're supposed to know Part 97 forward and back, Mickey.

>You also won't find mention of SWR meters, microphones, tables, chairs,
>CW keys, power supplies, etc. in Part 97. Is it your contention that
>these are not permitted to be at the disposal of an amateur station?

You'd be a miracle-worker if you were able to transmit with a table.
This discussion is in regard to legal definitions; if folks are
going to quote from Title 47 they need to know the FCC's definition
of each and every term that appears in what they're quoting.

STROM-MARTIN SCHOOL BUS SAFETY BILL GETS NOD FROM THE
ASSEMBLY TRANSPORTATION COMMITTEE

SACRAMENTO -- Assemblymember Virginia Strom-Martinï¿½s clean up legislation
for the Lanni School Bus Safety Act was given the vote of approval by the
Assembly Transportation Committee today. AB 2375 allows the local school
district bus drivers to transport students more safely.

Strom-Martinï¿½s legislation creates certain exemptions to the 1997 Lanni Act,
which school buses to turn on their flashing red lights whenever students
exit a school bus. Traffic in both directions is required to come to a stop
until the flashing red lights are turned off. In some instances, strict
compliance with the Lanni Act actually creates a more dangerous situation
for motorists and students.

ï¿½Because of certain road conditions and locations, it can be even more
dangerous to require traffic in both directions to stop when students
unload.
Last yearï¿½s law was aimed at curbing potential dangers to students unloading
buses. I introduced AB 2375 to further the spirit of that law and address
the specific safety concerns of parents, school administrators and board
members, as well as the California Highway Patrol. This legislation will
help the school districts to comply with the intent of the Lanni Act and
also provide the safest possible environment for their students,ï¿½ stated
Strom-Martin.

ï¿½Many legal bus stops were eliminated along rural highways throughout the
state because of the threat of increased rear-end accidents and collisions.
This action resulted in children being forced to walk further distances
along these highways where truck traffic is heavy,ï¿½ explained Strom-Martin.

My office and those of my legislative colleagues were inundated with urgent
pleas from parents to do something before a child is hurt.ï¿½

AB 2375 would provide exemptions to existing law for bus stops on a divided
or multi-lane highway. It would further exempt conditions where the roadway
surface is covered by snow or ice, where a school bus is broken down or when

students require more time to board or exit the bus.

Finally, it exempts loading zones on or adjacent to the school grounds. In addition to the specific waivers, AB 2375 will allow school boards will be able to seek waivers for other bus stops they believe would be more dangerous if the bus activated its flashing red lights.

http://www.assembly.ca.gov/demweb/members/a01/press/p0198008.htm

CALIFORNIA CODES
VEHICLE CODE SECTION 22454-22454.5

22454. (a) The driver of any vehicle, upon meeting or overtaking, from either direction, any schoolbus equipped with signs as required in this code, that is stopped for the purpose of loading or unloading any schoolchildren and displays a flashing red light signal and stop signal arm, as defined in paragraph (4) of subdivision (b) of Section 25257, if equipped with a stop signal arm, visible from front or rear, shall bring the vehicle to a stop immediately before passing the schoolbus and shall not proceed past the schoolbus until the flashing red light signal and stop signal arm, if equipped with a stop signal arm, cease operation.
(b) The driver of a vehicle upon a highway with separate roadways need not stop upon meeting or passing a schoolbus which is upon the other roadway. The driver of a vehicle need not stop upon meeting or passing a schoolbus when the schoolbus is stopped at an intersection where traffic is controlled by a traffic officer or official traffic control signal, or when the schoolbus is stopped at a place where traffic is controlled by a traffic officer or official traffic control signal.
(c) (1) If a vehicle was observed overtaking a schoolbus in violation of subdivision (a), and the driver of the schoolbus witnessed the violation, the driver may, within 24 hours, report the violation and furnish the vehicle license plate number and description and the time and place of the violation to the local law enforcement agency having jurisdiction of the offense. That law enforcement agency shall issue a letter of warning prepared in accordance with paragraph (2) with respect to the alleged violation to the registered owner of the vehicle. The issuance of a warning letter under this paragraph shall not be entered on the driving record of the person to whom it is issued, but does not preclude the imposition of any other applicable penalty.
(2) The Attorney General shall prepare and furnish to every law enforcement agency in the state a form letter for purposes of paragraph (1), and the law enforcement agency may issue those letters in the exact form prepared by the Attorney General. The Attorney General may charge a fee to any law enforcement agency that requests a copy of the form letter to recover the costs of preparing and providing that copy.
(d) This section also applies to a roadway upon private property.

22454.5. Notwithstanding Section 42001, a person convicted of a first violation of Section 22454 shall be punished by a fine of not less than one hundred fifty dollars ($150) or more than two hundred fifty dollars ($250). A person convicted of a second separate violation of Section 22454 shall be punished by a fine of not less than five hundred dollars ($500) or more than one thousand dollars ($1,000). If a person is convicted of a third or subsequent violation of Section 22454 and the offense occurred within three years of two or more separate violations of Section 22454, the Department of Motor Vehicles shall suspend the person's privilege to operate a motor vehicle for one year.

Motorola-owned SMR's in the 800 band have been disappearing for a
while now that Nextel is converting them into their digital IDEN
systems, this is not news. As for the public safety systems being
gobbled up, I doubt this will happen, county or city run Smartnet or
Smartzone systems have more failsafes built into them than your
run-of-the mill IDEN system, and these agencies can control the system
more than a Nextel-owned system. It is rather cold that these SMR
users are having to be pushed onto an IDEN network at a much higher
cost, and IMHO having to put up with compressed digital 1's and 0's
instead of good 'ol fashioned analog waves. Any of you ever listened
to those crappy IDEN radios? Sometimes good, but a lot of times just
marble-mouth garble.

4798. Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-09-03 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <35ef0b88.52255717@news.iaw.on.ca>
Source record: 145253

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.
You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to give it a try, you can download the
program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

There are several fires are burning in California.

What frequencies should I have my scanner tuned to?

CALIFORNIA CODES
PENAL CODE SECTION 402

402. (a) Every person who goes to the scene of an emergency, or stops at the scene of an emergency, for the purpose of viewing the scene or the activities of police officers, firefighters, emergency medical, or other emergency personnel, or military personnel coping with the emergency in the course of their duties during the time it is necessary for emergency vehicles or those personnel to be at the scene of the emergency or to be moving to or from the scene of the emergency for the purpose of protecting lives or property, unless it is part of the duties of that person's employment to view that scene or activities, and thereby impedes police officers, firefighters, emergency medical, or other emergency personnel or military personnel, in the performance of their duties in coping with the emergency, is guilty of a misdemeanor.
(b) Every person who knowingly resists or interferes with the lawful efforts of a lifeguard in the discharge or attempted discharge of an official duty in an emergency situation, when the person knows or reasonably should know that the lifeguard is engaged in the performance of his or her official duty, is guilty of a misdemeanor.

(c) For the purposes of this section, an emergency includes a condition or situation involving injury to persons, damage to property, or peril to the safety of persons or property, which results from a fire, an explosion, an airplane crash, flooding, windstorm damage, a railroad accident, a traffic accident, a power plant accident, a toxic chemical or biological spill, or any other natural or human-caused event.

Both of the Uniden Trunk Trackers so far, the 235 and the 895 have been triple conversion. There selectivity and image rejection are superb. I'm sure the radio shack clones are the same so I see no reason why the mobile version would be any different. I'm sure its just a 895 without the power supply and a different case.

4805. Getting coax from the outside to the radio

Newsgroup: rec.radio.scanner
Date: 1998-09-03 00:00:00 UTC
From: cozyelm@aol.com
Message-ID: <19980903054341 00.BAA00344@ladder03.news.aol.com>
Source record: 145260

OK, I have the scanner and I have the antenna. NOW what is the best way to get the coax to the radio? I live in a mobile home, I don't want to string it thru the window and leave the window partly open (security reasons) Not even with a stick wedged in the runner of the window. So what other options do I have besides just drilling a hole and running the cable thru it. I would not mind this so much but I would like something more professionaly done. Any help you guys can offer will be appreciated.

4808. Need help with ID'ing TV station

Newsgroup: rec.radio.scanner
Date: 1998-09-03 00:00:00 UTC
From: Matthew Stone <mstone@interlog.com>
Message-ID: <6slfomip1@news.interlog.com>
Source record: 145263

Hey there all.. I need help with ID'ing a tv station. I am in the Toronto, Canada area and was flipping through the stations when I came across a set of colors bars on Channel 36. Now all the color bars are ID'ed with are the letters 'CTS' in the lower right hand corner. I am using a pair of rabbit ears with an 10db amplifier and this station is coming in clear as a bell. Any ideas what the heck this is.

Thanks in advanced,
Matthew <mstone@interlog.com>

Temecula is on what's called TAN-1 and the new Blue (39.14) is BLUE-1.
I show Riverside & Rancho Cucamonga on the GREEN (42.54 Base & 42.24
Car) Has this changed ??? If so what color is the new freq and what is
the mobile freq ???

Thanks,
Mike

4811. Strange sound heard when two triple-conv. RS scanners operated side-by-side

Newsgroup: rec.radio.scanner
Date: 1998-09-03 00:00:00 UTC
From: mtbikerno@spamnojps.net
Message-ID: <35ee70e9.41680366@news.jps.net>
Source record: 145266
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Whenever I have my RS Pro-2004 and 2035 scanning 800 Mhz at the same time I hear a whine coming from the one that is at a higher volume setting. This only occurs when the scanner that is at a lower volume is stopped on an active frequency. When the "quieter" scanner is scanning and the "louder" scanner is on an an active frequency I hear a "beep-beep" every time the "quieter" scanner completes a scan cycle, or whatever you want to call it when the scanner scans an entire bank of freqs. I first noticed this when I did the beep disable mods on my 2006 and 2035 (I had cut the appropriate wire and taped the ends), so I figured it might be some kind of weird side-effect of cutting the wire. I cut the wire completely off and applied silicone to the tiny end that was still in the connector. This may have helped ever so slightly, but maybe not (placebo effect, anyone?). I also did the beep disable mod on the 2004, but I didn't remove the wire like I did on the other two scanners because I'm not really sure if I need to. Has anyone else encountered this situation with two triple-conversion scanners operated side-by-side? BTW, I use Radio Shack's telescoping indoor base antenna with the center load on all three of these units. Because they all have a BNC connector, I use a Motorola-to-BNC adaptor on all of them.

Remove "nospamno" to email.

>www.inetnow.net/~creeper/scanner.htm

Now Really, just marble-mouther garble?
This is what happens when you don't "fully quiet" the digital
repeater.., it's only getting bits and pieces, but it still passes
them on.
This is a very rare instance with the IDEN radios I use, and I
challange anyone to find a more versitale system for the common public
user...I can use my radio hundreds of miles from other users, and
still have crystal clear comm's with them.
Yeah, I can talk 1000's of miles with my HF rig, but not nearly as
reliable, predictable, or practical.
And the SMR's sucked......I used them too, you were lucky to get
coverage over an entire metro area.......using the one or two tower
method.

writes

Hi,

>Anyone out there know a cellular mod for a Radio Shack PRO-60? I have looked
>everywhere but can't find one. TIA
>

As with most of the most recent RS (mfr by Uniden & GRE) and Unidens own
sets the frequency "coverage" is controlled by the main IC rather than a
Matrix of Diodes as found on sets such as the PRO-43.

The US PRO-60 uses a CPU that has the US cell frequencies blocked out,
the version sold here in the UK and elswehere in Europe uses a different
CPU (the only different component between the two "models") that does
not have the frequencies used by US cellular blocked out.

The only way to restore the frequencies used by US Cellular and allow
keyboard entry is replace the main IC (a 100 pin'ish surface mount
chip).

The PRO-60 however does not have programmable increment steps and you
would find if you did replace the IC then it would step through the
800MHz frequencies in 12.5KHz increments. US cellular uses 30KHz.

Hope this helps.

Cheers,

From: baf@texas.net.antispam
Message-ID: <OJvH1.11$h6.53217@news.giganews.com>
Source record: 145272

Jim --

This is a problem commonly faced in running TV antennas from roof to rec room, so have a look at the books in Radio Shack and local electronics stores about running antenna lines. There are a few points you MUST consider. The main one, in order to keep on living, is not to let the antanna line serve as a way of bringing lightening into the living room. Next in importance is not letting the coax serve as a way of introducing water into your walls (easy, you make sure there is a "drip loop" in the cable where it enters, so that water, with the help of gravity, flows down and AWAY from the entry point (which is on the side, not the roof, natch), not toward it), and third, the entry point should not serve as a conduit for insects, spiders, snakes, etc. Grommets, caulking, careful drilling, and paint all help here.

Good luck.

BAF (to respond by email, delete the .antispam)

John Mullaney <john@minutemancomm.com> wrote:
> ... the 235 and the 895 ... selectivity and image rejection are superb.

Much as I like my BC895, I have to quibble about that. While I have yet to encounter any significant imaging, selectivity leaves something to be desired. In bands with 12.5 kHz channel separation, bleed-over can be a real problem. In Atlanta, allocations are cheek-by-jowl in many bands and even a moderately strong signal will show up on adjacent channels.
Likewise, the local intermod problems in the 460 MHz region will overcome the 895's front-end (admittedly, every receiver except the PRO-2005 has been defeated by our transit authority, which even hetrodynes with itself).

Nonetheless, the TT is a great radio. If I weren't downtown in one of the highest communication density cities in the country (I think we have more cell phones than bathtubs <g>), I'd probably never notice the limitations.

Source record: 145275

The SC 150 is a good scanner for taking on trips or to the Race or whatever, and searching all of a band for traffic. It has like 10 or so search bands that are preset. All you do is select the band and it starts searching. It however is not good to keep as your "main" scanner. Programming channels is a pain in the butt and the audio is not that great. It is a good radio for finding active frequencies in an unfamilliar city or whatever. That's what I use it for anyway, i'm sure someone will disagree with me.

Source record: 145279
Cross-posted to: rec.radio.scanner,alt.radio.scanner

For scanners the BEst combo would be to use a 9913 50 Ohm cable with a type N connector.

In reality the difference between 50 and 75 ohm cables for receiving AND the difference between BNC/UHF/N connectors will not be noticable to the listener...

For the higher frequencies cable loss becomes the biggest factor. So if you want to listen to the higher bands (ie 800MHz) with a long cable run of more than 50 feet use a 9913 style cable, otherwise any 50 or 75 ohm cable will work just fine.
I would also stay with the connector style used on the antenna, UHF if I remember correctly.

Just be aware that suspects are many times near or at the crime scene. You
would not want the police to suspect you in any way.

Hi Ad,

>anyone here who knows how to turn on the PRESET mode on a YUPITERU MVT-9000?
>My manual does not list it, and applying procedures as available from the
>internet yield no result.

If you have a "Export" version of the MVT-9000 (MVT-9000EU) then the
"PRESET" feature is not available on this version and not detailed in
the manual.

This feature is controlled via a Surface Mount component on the Logic
PCB. To the right of the main CPU is a location marked "P".

On the Japanese domestic model (which has PRESET) this component is
missing, on those without "PRESET" this is in place. To enable the
"PRESET" feature remove this component (make sure its the correct
one !)

The "PRESET" mode is aimed at the Japanese market and not ideal for use
here in Europe. I'd suggest you leave it as it is really.

Hope that helps.
Cheers,

|> You're supposed to know Part 97 forward and back, Mickey.
|>

OK, it's there. I missed it because I was searching for "amateur station"
not "Amateur station". I gotta change my default to be case insensitive
on searches.

I was wrong on the "no definition" part, sorry.

" (5) Amateur station. A station in an amateur radio service consisting
of the apparatus necessary for carrying on radiocommunications."

It seems to me that a transmitter that can transmit on any frequency
falls quite nicely into this definition. How do you read into this that
other equipment is forbidden? If I "roll my own" transmitter out of
components, I don't think there is a requirement in Part 97 that it be
physically incapable of transmitting outside the ham bands. Is such a
"roll your own" transmitter forbidden to be part of an "amateur
station?"

What about all the people who have radios that can transmit on the old
220 MHz band. The FCC reduced the size of this band a while back. Do
the hams with radios still capable of transmitting on the frequencies
that aren't part of the ham bands any more have to throw their radios

away? Is such a radio excluded from the definition of "amateur station?" It is capable of out-of-band transmission.

Even if you can somehow read into this that out-of-band capable equipment is excluded from the definition of "Amateur station", the relevant paragraph does not discuss equipment that is included in the definition of "Amateur station", it discusses "any means of radiocommunication at its disposal". If other equipment is "at its disposal" even if it's not "part" of the station, it's permitted per 97.403.

"S 97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of any means of radiocommunication at its disposal to provide essential communication needs in connection with the immediate safety of human life and immediate protection of property when normal communication systems are not available."

As a sappy example, if you come upon an unconcious policeman in need of immediate medical help, who has had a car wreck, and "normal communication systems are not available.", you may use his police radio to call for help per 97.403, even if this radio is not included in the definition of your "amateur station."

|>
|> >You also won't find mention of SWR meters, microphones, tables, chairs,

|> going to quote from Title 47 they need to know the FCC's definition
|> of each and every term that appears in what they're quoting.
|>
|> Jeff KH2PZ

What do you mean when you say,

"Again I ask, at an "amateur station," just what equipment would be at one's disposal? (You might want to look up the definition of "amateur station" in Part 97 prior to answering. You won't find any mention of out-of-band gear.)"

Are you saying that an amateur station may not have an out-of-band capable station "at one's disposal" because it doesn't fall within your interpretation of the definition of "amateur station"? The things I mention aren't part of the definition either. Why am I allowed to have these things "at my disposal" and not a radio capable of out-of-band transmission? Please provide a quote from the rules that differentiates between an out-of-band capable radio and other equipment that's not part of the definition of "amateur station".

Do you contend that a radio that is capable of out-of-band transmission is not allowed to be included in the definition of "amateur station?"

Please quote the rule that forbids this.

Do you contend that an amateur station is forbidden to have equipment other than that included in the definition "amateur station" at its disposal? Please quote the rule that forbids this.

For ham radio communications, the distinction is "messages in codes or ciphers intended to obscure the meaning thereof,". There are some slight restrictions, embellishments, etc., but the "intent to obscure" is the key point. You can see the FCC Ham radio rules at

http://www.arrl.org/field/regulations/news/part97/

Why not drill a hole through the floor inside the mobile home, immediately
next to the wall? Run the cable out from under your mobile home to the
antenna.

Hi, "Highcove-family" :-)

>In a reply to a message I recently posted, you said that
>modifying the R10 was fairly simple. However, I checked your page, and
>I remembered why I didn't try it before. You warn on your page that
>only very experienced people should try it, as it requires sautering
>down to a 3mm level.

That's correct. The modification is very simple in theory, with which I meant the fact that only 2 resistors need to be soldered into the unit. The difference between a blocked and an unblocked IC-R10 is, thus, only 2 resistors. On my page however, I warn anyone that is about to do the mod that soldering SMD components (SMD=Surface Mounted Device) is difficult. The parts are extremely small and it's easy to make mistakes or damage the unit. This is the practical side of the mod. But, on the other hand, you might find someone (a handy neighbour or a shop owner or so) that can solder the resistors for you. He/she should be able to do so in about 10 minutes.

Nevertheless, I can understand your confusion on what I call 'easy'....

>Also, I don't think that Radio Shack (the largest
>electronic parts retailer in the U.S.) carries those particular
>resistors, though I could be wrong.

This is not completely true. SMD resistors are available at lots of places and 10k is a *very* general value for any type of resistor. They should cost about $ 0.25 each or so.

>Could you straighen me out on this
>one, and tell me whether it is or is not recommended for a lightweight
>amateur like me to try this mod?

This mainly depends on your soldering techniques and the equipment you own. If you have 'surgeon hands' and a special SMD soldering iron you should be all set. Please note that I did NOT do the mod myself, since I have the European model.

Thanks for your comments,

I boycotted Radio Radio Shack because RS's Parent company, Tandy,
is a member of the Cellular Telephone Industry Association (CTIA)
that forced the Electronic Communications Privacy Act 1986 (ECPA) onto us.

I decided to boycott RS when a RS Droid was explaining to another customer
"with this radio, you can tune to the police and listen to all the things
they don't want the public to know about". When I asked if that was a
newer radio that could intercept cellular communications, the droid became
upset and began shouting at me "IT'S ILLEGAL TO EAVESDROP ON CELLULAR" ect.

The other customer got a worried look on his face and quietly sneaked
out of the store while the droid, now gritting his teeth and clenching
his raised fist, continued to shout, "IF YOU LISTEN TO CELLULAR, YOU
WILL KNOW ALL THE THINGS THEY DON"T WANT THE PUBLIC TO KNOW ABOUT!"

I just wanted to listen to the radio, I didn't want to get involved in
a political issue.

> Matthew <mstone@interlog.com>

This was discussed on the AMFMTVDX mailing list at qth.net. Here's what
Saul Chernos said:

Subject: [AmFmTvDx] Forget DXing 36 in Toronto area.

Crossroads Television System is on the air testing on TV-36. Licenced to
Burlington ON, they use the tower of CHCH 11 Hamilton. Seem to be weak,
so maybe reduced power. test pattern and gospel music. They're supposed
to be multi-faith, in accordance with Canadian regulations. I've heard
the program Director is Jewish, so it will be interesting to see what
evolves.

They're running on a plus offset, and Mike Reid says they're a bit off
that on the ICOM. I can't tell from my TV set. Signal is indeed weaker
than I'd expect...

I don't know if 36 will run 24 hours or sign-off periodically. So 36 may
be down the tubes for DXers in this area.

Opinions expressed herein are my own and may not represent those of my employer.

You folks amaze me. Here is a gentleman who politely mentions a deal he wishes to offer in simple terms.
You flame him immediately.
Are you anti business or anti capitalism which is the backbone of the USA?

In earlier posts you find a person was making constant self promotional posts about an import radio card and you defend him as if he had a god given right to spread self-serving misinformation here in USENET. What values do you have? BTW how do you count yourself a friend of Bill Cheek if you are anti business? Haven't you been in contact with his views lately? He stated that a post like yours is what is wrong with USENET as it obviously anti business. In my opinion Bill cheek is mad that many of us have boycotted his books and hardware offers because of his abuse of us hobbiests, the USENET and the Internet in general.

PS I notice Bill Nadzam is a ham which should confer some respect on him on that fact alone. The price he has on the two trunktracker models is fairly good by the way compared to Radio Shack units if the shipping isn't too high. I notice that he offers free shipping for a few days. One can save 4% to 8% also by avoiding the sales tax.
Bill Nadzam has a popular radio at a very good price in my humble opinion.
He is doing us a favor by mentioning it for our benefit.

FWIW the Georgia State police are switching to a digital system like Nextel.
It is owned by the Southland Corp which I think is a big natural gas energy
supplier but I am not sure.
They are selling their excess system capacity to GA.
It is going to cost GA only an additrional $300 million to do the state as
most of the towers etc. are already in place.
They have been testing the new system since May when the Metro GSP VHF
repeater in Atlanta fell into general disuse.

The GSP will have digital paging and phone calls in addition to the normal
state police comms.

This digital system must be pretty good for the whole state to switch.

The 235 xlt can not monitor such a system.

I wishI knew wich way it will go digital format voice or "encrypted" as for listening those who paid for the system ought to be able to listen to the non confidential/routine stuff but most in the business do not think that way and most of the public doesn't care so we are probably out of luck.

****
If you have a Ham license, a police radio, and see a threat to life or
property -- it's perfectly legal to use the police frequency.

This is what several have stated before.

Motorola had nothing to do with the move to 800, it was the wonderful FCC, when every major city and county requested new frequencies in their old bandplans the FCC said no way and made them move to 800.
BTW The entire eastern Maricopa county (Phoenix area) 800 system was down for 5 days a few weeks ago and it was interesting to hear all the PD users(County probation, Scottsdale PD, Gilbert PD etc.) crammed on one channel with that annoying no access tone every 30 seconds.

Long live Low Band.

The clearly bright but sometimes spurious Ryan Faricy wrote...

>BTW: The world doesn't revolve around Australia, so I recommend you post
>VALID information for the US when necessary. You post incorrect cellular
and
>cordless frequencies all the time.
>
>If you need to post for Australia, do so in the Australia Scanner
newsgroup.

Ryan:

When I was your age (sixteen), I sometimes said things which I regret to this day. Please understand that I offer this in a constructive manner.

Like so many young men nearing adulthood, you have yet to fully appreciate the world around you. This is clearly elucidated in some of your postings. While your comments reflect your high IQ, they at times do not reflect the social grace which will be required for you to prosper in adulthood. Have no fear - you are not alone, for I am one of many who have traveled that path.

Ryan, you speak of your faith (Jehovah's Witness) as well as your desire to attend USC.

How then, would you feel if your postings were to be reviewed by church elders or an admissions officer at the college? Does the bellicose posting above reflect your true nature?

I sincerely doubt it.

I can assure you however, that at least one prominent USC graduate has read your words. Did he get the right impression? Would he want you to attend his alma mater? A school well known for its international relations? Well?

The Aussies I know would be the first to admit that the world does not revolve around their island nation. It is equally as ridiculous for you to think that the world revolves around ours. When someday you have a chance to travel, meet and truly know those from other cultures, you will have a grasp of what I am saying. Were it not for the valiant sacrifices of the Australian military, you and I might be living in a far different world.

The newsgroups you have posted to are:

"rec.radio.scanner" and "alt.radio.scanner"

They are by their very existence an international forum. The letters "U.S." appear nowhere in their title or FAQ.

Ryan, rather than getting somewhat rankled and firing off a hasty response, please take a moment to print this letter. Take a day or two to think about it. Don't bother to reply to anyone other than the soon-to-be man who looks back at you in the mirror.

Then, think and more importantly *act* in a manner befitting those of your faith and education. You owe it to them and yourself.

If you should be fortunate to attend USC, you will no doubt graduate with honors. There will be a moment however, as you walk towards the podium to accept your diploma, that you will encounter a tall man with gray hair. The crowds will easily part for him as he approaches you, simply to ask "Did you get the message?"

4876. Re: Getting coax from the outside to the radio

Newsgroup: rec.radio.scanner
Date: 1998-09-04 00:00:00 UTC
From: Mike Fairleigh <mikef@sky.net>
Message-ID: <YI1I1.250$4S5.6653308@alpha.sky.net>
Source record: 145081

I don't know if they still have it, but years ago Rat Shack sold a through-the-wall device for coax (or other cable). You drilled a hole the correct size for the tube, and then screwed the supplied flanges onto both sides to seal up the hole. Of course, it was sized to fit in standard stud walls, and I'm not familiar with the wall construction of mobile homes.

So what are *you* doing now-a-days John? I see you're still actively forging away with your little fantasy support group.

And Bill Cheek's FAQ's on scanners really burns your butt, doesn't it? What is it about those posts that bother you? They look like they're all about scanners. Why are you jumping all over them? Are you saying they weren't written by Bill?

No, that's not it. Bill wrote them. I've seen them before. I compared them to previous posts that I saved last year. They're identical. Bill Cheek wrote them.

You know that too.

What's the problem?

You friggin' loon.

4878. Kenwood RZ-1??

Newsgroup: rec.radio.scanner

Can anyone advise what a *used* Kenwood RZ-1 wideband scanning receiver might be worth right now? This is not a museum piece, lacking its original box and having been used in a mobile installation.

Thanks, Bob

There's another way that most people don't think of; use a VHS VCR that has the SLP setting for longer play. That can extend recording time for up to six hours on one VHS tape. I used to record party tapes with six hours of music from my cassette tapes to the audio track of the stereo VCR VHS tape.

Six hours of continuous audio recording (super quality), and none of the chirps, blips, and cuts that VOX switching can cause.

The down side is that you've got six hours of tape to review to find what you're looking for.

If you need all six hours, VHS audio track recording is cheap and easy.

But VOX switching is probably better if you just want the transmissions.

Maybe no one understands me. RadioShack no longer charges for their catalog. If you want one, then go to RadioShack and ask for one. They will give you one.

$19.95 for three years. And the cool thing is that if your catalog gets broken and they can't fix it, then you get a new one, even if it is a year 2000 catalog.

BTW, they are calling it the Extended Service Option in the new catalog.

Hello there,
Selling,
PRO-26 HAND HELD SCANNER,200 channels,25-1300Mhz cell
blocked,hyperscan,weather,air etc.works great
Asking $165

PRO-2046 MOBILE SCANNER,100 channels 800 Mhz,use as base or put it under
the dash,sells for $229 in 97 catalog,
Asking $95

Thanks Russ

Thousands of scanner listeners do this every day without incident.
If there are no local/state laws about mobile scanner use, you
should be fine. If it is a PI or PD, just don't get run over by
the vultures (tow trucks).

Since you act responsibly at scenes, I doubt you'll have any
problems. As a "first responder", you should be prepared to make
accurate observations (from a safe distance) when warranted.
Suspect/vehicle descriptions, tags, direction of travel, etc.,
can go a long way towards making a copper's job easier.

4887. Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-09-04 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <35f1ec79.3369734@news.iaw.on.ca>
Source record: 145127

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.
You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to give it a try, you can download the
program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

> PRO-43. While the above five base scanners can be called 'siblings',
> the PRO-43 isn't, but it is a 'kissing cousin'. The PRO-43 shares
> enough of the circuitry and specs of the Big 5 that it is one of my
> favorite handheld scanners....perhaps THE favorite. It is the only
> Radio Shack handheld scanner to ever come with the military aero
> band. That alone is pretty awesome.
>
> The PRO-43 is capable of many mods and hacks, including continuous
> coverage from about 8 MHz to 1 GHz. Yes, shortwave! Not that it
> works very good down that low, but the mod does unleash the force.
> The PRO-43 is a very cool radio and certainly the last of its kind.
> There are newer and snazzier handhelds out and about, but when it
> comes to more steak and less sizzle, the PRO-43 is hard to beat.
>
> The PRO-43 works with the CE-232 Scanner/Computer Interface in 1-way
> controller and AutoProgrammer mode.
>
> PRO-64 and PRO-2041
> ===================
>
> The PRO-64 (handheld) and PRO-2041 (base) are electronic clones of
> each other, (electronically identical) and what I would call 'second
> cousins' to the family of the PRO-2004/5/6/2035/2042 and a first
> cousin of the PRO-43.
>
> Good as these scanners are, they're even better when you consider
> that they come with a built in computer interface. Five bucks worth
> of parts and a free program lets you program these scanners with 400
> channels of frequencies in about 45-seconds! Now ain't that slick!
>
> The PRO-64 and PRO-2041 are well covered in the monthly WORLD
> SCANNER REPORT, where we've found these two rigs to be eminently
> hackable and modifiable.
>
> PRO-26 and BC-3000XLT
> =====================
>
> There is no relationship of the PRO-26 and BC-3000XLT to the family

> of the PRO-2004/5/6/203/2042/43/64/2041. That "family" was made by
> GRE-Japan while the PRO-26 and BC-3000XLT were made by Uniden in
> Taiwan. The PRO-26 and BC-3000XLT are close clones of each other,
> however. They are not identical, but you'd have to study their
> schematic diagrams for a while to spot the differences. For all
> practical purposes, they are alike.
>
> Some say the BC-3000 is a little better than the PRO-26, but that's
> not cut and dried. These two radios are great performers and have
> excellent potential for mods and hacks. Forget cellular; it ain't
> going to happen shy of the low-rent "VD" mod or replacement of their
> CPUs with European versions. Neither of these so-called cell mods
> are acceptable in my books and they all cost a lot of money, time,
> and trouble for sub-par results. <Gack>
>
> UNIDEN SCANNERS
> ===============
>
> Uniden is best known for selling lots of sizzle and not so much
> steak. Generally speaking, especially in their base scanner line,
> you buy software more so than hardware. All radios nowadays are
> microprocessor and firmware based, but Uniden takes this concept to
> the ultramax! Software is cheap compared to hardware. Not since
> the Muntz TV's of the 1960's have I seen such sparkling, glittering
> chassis on the outside and near vacuums on the inside.
>
> Uniden has made some good radios in their time, including the
> BC-200XLT, BC-205XLT, BC-3000XLT, and the PRO-26. The common factor
> here is that these four are handheld scanners. Uniden seems
> incapable or unwilling to make comparable quality base scanners,
> though their latest offering of the BC-9000XLT might well be a
> sleeper. At least, it comes with more firmware frills and sizzle
> than any prior offering.
>
> In general, I don't recommend Uniden scanners. Read my lips now;
> I don't advise against them....I just don't whoop them up. I'm not
> comfortable with their marketing tricks and hype. Uniden goes after
> the masses with a hokey glitz and glamor, the price of which is
> included in the cost of the scanner. You end up buying software,
> sizzle, glitz, and glamor. In my opinion, the "steak" is tough and
> you don't get much.
>
> As usual, there are exceptions.....
>
> THE TRUNKTRACKER SCANNERS
> =========================
>
> So far, Uniden is the only manufacturer so far of TrunkTracker
> scanners, including the PRO-90, BC-235XLT, BC-895XLT, and now, the
> PRO-2050. The PRO-90 and BC-235XLT are identical clones and the new

> PRO-2050 in a base package might well be a clone of these two. The
> PRO-2050 is not a clone of the BC-895XLT, despite both being base
> scanners.
>
> I'll have to hand it to Uniden on their TrunkTrackers. The TT
> radios seem to be a fair mix of sizzle and steak, and they certainly
> do track the Motorola trunked systems. The BC-895XLT may even be
> computer controllable though Uniden doesn't support it, but I hear
> that 3rd parties may be offering control software for it.
>
> Basically, I'm not sold on this first generation of TrunkTrackers,
> despite the fact that they work and the public seems to have
> accepted them. I'll tip my hat, that's for sure, but I'm all for
> waiting to see what GRE-Japan comes up with. And we all know that
> "Version 1.0" of anything these days isn't the best that can be
> done. So I am waiting for the competition to gear up and/or for the
> 2nd generation of TrunkTrackers to come.
>
> Someone has to buy into the first generations of new stuff. If
> you are so disposed, you won't get any argument from me. If you have
> a conservative "wait and see" attitude, you'll find me in your
> company.
>
> AOR SCANNERS
> ============
>
> AOR seems not want to sell very many scanners in the USA. They have
> a yo-yo, switchy-swatchy pattern to their marketing and technical
> support. Their service manuals are both expensive and deplorable.
> AOR seems to serve a cultist, elitist, niche scanning community.
> Despite that their top of the line radios might well be second to
> none, I just don't support them.
>
> If you have an AOR scanner and like it, I can understand why. But
> you are a minority and AOR apparently doesn't want to do anything
> about it. I prefer to serve the majority, and so there is little
> more I can say about AOR scanners.
>
> NEW PLAYERS IN THE SCANNER GAME
> ===============================
>
> Relm and Sony are new players on the scanner scene. I don't know
> anything about these rigs yet; the Sony is much too new, and the
> Relm just doesn't have much of a market penetration yet. People say
> it's a good radio; maybe they're right, and maybe they're just
> defending the wisdom of their purchase. I think both are doomed to
> bit-player and niche status, but time will tell.
>
> Meanwhile, with rare exception, I give my stamp of recommendation
> only to those radios that have withstood the test of time. The

> johnny-come-lately's may well be good scanners, but if that's true,
> then they will pass the test of time. AOR's AR-8000 is one such
> example. It's been around for some time and continues to do well
> despite a more advanced model recently announced.
>
>
> YUPITERU SCANNERS
> ==========
>
> It is illegal to import "Yupi" scanners into the USA, because they
> are not certified by the FCC for sale here. Furthermore, Yupiteru
> seems to not give a whit about the US market, so why should I give a
> hoot about them? There is also the question about sending good USA
> money to markets that do not return some benefits to our community.
>
> Not only that, but service and support for Yupiteru radios are
> either nonexistent or at best, 3000 miles away. However, you can't
> get a service manual for these scanners. You buy a Yupi and you risk
> running afoul of the law; as well as having dead meat on your hands
> should the unit ever fail.
>
> Some people claim the Yupi radios are the best they've ever used.
> I hear little of anything bad about them. So the issues you have to
> deal with are patriotic ones, and those of service and support, and
> last, but not least, legal issues. So far, no one's been nailed for
> importing a Yupi scanner, but somewhere, someday, someone's going to
> be the first. Could it be you?
>
>
> WORLD CLASS RADIOS
> ==========
>
> There is a class of radio, not properly called a scanner, but
> without a name or a home anywhere else. I call them "world class
> radios" for lack of a better term. These include wide coverage
> receivers from Icom, Kenwood, and Yaesu.
>
> Kenwood and Yaesu seem to have slithered out of this market realm,
> leaving Icom pretty much uncontested at this time. Kenwood's RZ-1
> and Yaesu's FRG-9600 are much too old to be real competition now,
> but these are classics, and if you can snag one cheap, you may have
> a deal that's worth it.
>
> Icom has a number of entries in this class, including the R-9000,
> R-7000, R-7100, R-10, R-1, etc. I don't count these rigs in my
> recommended lists because they really don't fill the defintion of
> "scanner" in the important ssense of the word, and their cost is way
> out of proportion to scanners as we know them. Most of these rigs
> certainly qualify as "great" radios, but they are not scanners.
>

> COMPUTER-BASED RADIOS
> ======================
>
> A new class of radio has recently emerged....computer-based
> receivers, of which there are two: Icom's PCR-1000 and the
> WiNRADiO WR-1000i. This class of radio is characterized by their
> total worthlessness without a computer. These radios depend on a
> computer as an integral part of the operation.
>
> Several new and upgraded versions of WiNRDiO have been announced,
> and will be coming to market soon. Icom apparently isn't going to
> announce anything new until well into 1999
>
> The PCR-1000 follows Icom's tradition of speed. If it weren't so
> slow, it would have no speed at all. It's slower than a slug. But
> it does go portable by virtue of operation and control from an
> RS-232 serial port. And it does have some impressive technical
> specs for its coverage of LF into UHF. A little pricey, the
> PCR-1000 has made its mark and its loyal users appear to be
> satisfied with it in most respects aside from speed (or the lack
> thereof...)
>
> WiNRADiO Model WR-1000i cruises at 50-cps, and along with its
> standard RF Spectrum Scope and optional Digital Suite, is probably
> the better buy at a price significantly lower than the PCR-1000, and
> with a very powerful control program that's regularly updated and
> released FREE to downloaders.
>
> The WR-1000i covers 500 kHz to 1300 MHz, less cellular, but there
> are ways to deal with that. I can't tell you how, but if you look
> around, you should discover it.
>
> The specs for the Icom PCR-1000 and WiNRADiO WR-1000i are easily
> examined at the companies' Web sites, so I'll dispense with pitting
> one against the other. Both are great radios, but if you are
> undecided, you really need to do some homework and not take anyone's
> word for validating your decision. The Icom loyalists are too
> anxious to defend their choicess while WiNRADiO just doesn't have a
> lot of market penetration yet.
>
> Still, my choice is for the WiNRADiO, maybe because the hardware and
> software are undergoing constant upward revision and the company is
> very responsive to its customers. Just send them an e-mail and see
> for yourself. Then send Icom an e-mail...if you can.
>
> WiNRADiO has a high-end model, the WR-3000i, that isn't certified
> for sale in the USA. That, and its $2000 price tag make it
> pointless to discuss it here, but some people have come by one and
> speak highly of its awesome capabilities, including visual DSP!
>

>
>SUMMARY: As you can see, I really can't recommend a "best radio for the
>money". I have my preferences, and I told you about them. Take 'em
>with a grain of salt, or take 'em to the bank, I don't care. What
>matters more is that you be exposed to a diversity of thought and
>opinion. I am not a "company man" who minces words and wonders why we
>all can't get along. I deal in straight shooting and am happy to leave
>it to future generations to figure out why we all can't get along.
>
>Meanwhile, try to understand the differences between the various classes
>of radios and even the differences between manufacturers before choosing
>the radio of your dreams. All too often, the best today is not the best
>tomorrow, or the best up front is not the best overall. Maybe there is
>no single "best". For a fact, many scannists nowadays own and operate
>two or more radios.
>
>One thing to keep in mind...or get in mind....is that the entire face
>and nature of radio are changing, from the politics to the technology to
>the very content. What was good for and applied to radio of yesteryear
>is not good for or applicable to radio of tomorrow. Change is apparent
>everywhere. Be aware of those changes and learn how to cope with them
>and how to go with the flow.
>
>There is less to listen to these days and I don't see that trend changing
>any time soon. It's only going to get "worse" as more and more radio
>services see the economics and privacy of cellular, PCS, and other means
>of digital communications.
>
>But these very changes mean new opportunities in the offing. One example
>is how for many years, it took an expensive, sophisticated 3rd party
>instrument to decode RTTY, FAX, and CW. Now a couple bucks worth of
>parts and some free software do all that and much more. (See my Scanner
>Data Decoder FAQ or SCANDATA.FAQ.) There may be less to listen to, but
>there sure is more to decode.
>
>
>==
>
>That's it for now. I will keep this FAQ updated. If you see things
>that need to be added to it, by all means, let me know. If this FAQ
>fails to address your question(s), then hit me with 'em again, but be
>specific. And be detailed with symptoms and observations if you need
>tech support on mods or troubleshooting and diagnosis. Use e-mail if
>you can.

I used that antenna in the Chicago area with my PRO-43 and got significantly
better reception than with the antenna supplied with the unit. Easy to install
and stands up to car washes.

4891. Re: Best base scanner antenna?

Newsgroup: rec.radio.scanner
Date: 1998-09-04 00:00:00 UTC
From: dcisive@earthlink.net
Message-ID: <MPG.1059a751b3b1dd4098974c@news.earthlink.net>
Source record: 145131

After having spent many hundreds of dollars on antennas from Diamond, Austin, Antenna Specialist, Radio Shack and others, without hesitation the finest performing antenna without "holes" in it's performance was the Channel Master "Monitenna". This is a vertical dipole basically and if mounted the right way has "virtually" omnidirectional performance from 30 to 1300mhz. I even used to use it a bit with my shortwave receivers as well. I had a Grove preamp on it for the real tough stuff. I lived on the coast in Half Moon Bay California which had a mountain range (the Coast range about 1500ft) blocking all of the Bay Area reception. This antenna allowed me coverage of not only the San Francisco Area but also right down to San Jose. With the booster even Oakland. For 50 bucks you get the antenna, 50ft of RG6 cable and I believe the best performing scanner antenna out there period. I have tried virtually all of them from 50 to 400 dollars and this performed the best. If you want to know how I mounted this guy email me and I can fill you in on the details.

The best source I know of for Indiana freqs is here:
http://members.iquest.net/~aeverhart/

I'm not sure I've ever seen freqs for the RCA dome, though.

I have an ICOM R8500 but haven't (yet) had the problem you describe.

Check for bad ground connections on the printed circuit boards,
unseated connectors on the internal cables, etc.

Then, check the reference oscillator crystal.
I've repaired ICOM R7000 and R7100 receivers and an IC275H
transceiver and each had the reference oscillator crystal go bad
or age too far off frequency.

Legally, I don't think they can do anything, but you'd have to do
something for them to even notice you in the first place. Personally,
when I hear a call and I'm out and about, I use that info to "avoid" the
area.

I have just set up a web page with information on radio communications in Iowa. This is the only site that I have seen that has many trunked systems for central Iowa listed with ID's. I will keep adding more frequencies and things as time goes on. Please visit this site and bookmark it, or put links to it. I would appreciate all of the exposure

that this web page can get. Thanks.

4898. Question about images

Newsgroup: rec.radio.scanner
Date: 1998-09-04 00:00:00 UTC
From: hotcrab@my-dejanews.com
Message-ID: <6sp76m$905$1@nnrp1.dejanews.com>
Source record: 145138

My apologies if this has been asked before, but while listening to images (of, say, cellular base transmissions) on my PRO-26 I have noticed that sometimes I hear only one side of a conversation, sometimes two. It also seems that it isn't dependent upon which (cellular base) freq the conversation is taking place; I'll be monitoring a specific freq, listening to a one-sided conversation, and then the next call intercepted will be two-sided.

Is this a quirk of the individual's phone, their cellular service, the cell site transmitter, or my scanner (effects of triple conversion)? Or is that just the nature of images?

Thanks for your help.

The latest RS mail flyer (not the catalog), shows a frequency
counter for $79.99. Supposed to work from 1 to 1300 Mhz.

Does anybody have one of these?
How do you like it?
I'm also interested in finding out other sources for affordable
counters.

Thanks for your input.

It has nothing to do with the image,

Using my frequency counter and several analog friends' phones, I found
that it mainly depends on the phone, or the cellphone company. two of
my friends had the exact same phone but one of them I could only
receive his voice transmitted from the phone, while the other I could
hear the other side too.

Just my two cents. maybe the phones are configurable and each company
configures them differently.. I'm not sure.

I have to say that your problems are most definitely from your antenna
situation, you need to get the antennas away from the radios with good
coax cable.
I have a pair of 2006's stacked on top of a 895XLT and don't get any
inter-radio interferance..but they all have high quality coax going to
antennas far away!

>I boycotted Radio Radio Shack because RS's Parent company, Tandy,
>is a member of the Cellular Telephone Industry Association (CTIA)
>that forced the Electronic Communications Privacy Act 1986 (ECPA) onto us.

And if you had commented on the recent NPRM concerning scanner design
(they wanted to pot the interior of the scanner), you'd know that
Tandy hired a law firm to make comments as well. These comments
basically said everything we've been saying all along.

The CTIA is getting criticism from within. Tandy is a member because
many other Cellular Telephone issues, such local anti-cellular zoning
laws, are of concern to them. The anti-scanner legislation is but a
very small piece of the puzzle. The folks who run CTIA are like many
industry "leaders" --they're ignorant of what they're actually doing.

Get with the program. If you feel bound to boycott Tandy for
something they do not have control over, then write a letter telling
them what you're doing, and why. Put up or shut up.

When I was shopping for a counter, I found that the radio shack one, although not as costly, was :

1) EXTREMELY HEAVY, and very bulky too
2) You MUST fully extend the antenna for it to give you anything decent
3) The antenna was huge
4) It's not something you'd want to carry with you in the outdoors..
5) It is very, very sensitive to the slightest stray frequency, I don't recall a sensitivity adjustment, but I had to stick the antenna to the antenna of a wireless phone before the reading stopped flickering so I could get something.

My two cents.

My advice ? I have an Opto Cub, its not as good as the scout, it has no memory (just a capture mode, you reset it and if capture is on it will freeze on the next strongest frequency), but it does an excellent job at detecting... within that price range you might also be interested in the Opto TechToyz

Privacy on the radio will last only as long as it takes for
some scanner buff to discover your radio traffic.
Especially if you don't want to worry about repeater fees.
Your best bet for radio privacy would be one of the digital
radio/telephone services that use a combination of repeaters
and telephone lines. Our district attourney's office here
in central Alabama uses such a system. Thier handheld 2
channel radios have nationwide coverage because they tie
into the telephone system whenever they can't get a direct
radio to radio signal.

Amen....
I have had a CUB for over 3 years and love it. I paid around $140 for
mine but have seen them at times for $99. I have owned several Startek
freq counter that cost over $300 and they were not near as good as the
CUB! The Radio Shack is ok for someone that just want to use it every
now and then for radio tuning but other than that...its a piece of junk!
Makes one hell of a paper weight though!

If you can afford the Scout.....now thats one hell of a freq counter.

Well like probably 75% of scanner listeners.. i listen to puplic safety (uhf, vhf and 800mhz)... for my uhf and vfh i use a Comet GP 9 which is a dual band ham antenna... i actually have two... since the 2 meter and 70cm bands are right next to the public safety bands this ant works awesome... i get excellent ground wave for several counties in each direction... i live in the center of Oakland co MI... i get all the way up to saginaw co on and all the way down to monroe co and some agencies in wood co OH.... when the DX is coming in i get TONS of DX... i also regularly get Cleveland FD on 153.95... I also use a cushcraft 13 element 2 meter beam ant... works great for DX also.. for 800mhz i have a 6 ele beam that i can pick up trunk systems from all the surrounding counties also...

Consider 2 meter. Even though they are outside your requested
frequency range, they will give you the distance you want quite
consistently and they are much more affordible than most other HAM
equipment. Also, all you need is the no-code license to use the band
so it is easy to use it legally. Check out the offerings from Alinco
and Icom and then go to AES to get a real price. Good luck.

I know. It seems like the US is getting to be like the old Russia more and more. Think about it, can you imagine it being not legal to listen to radio waves in the US in the 50s. They would have all said that is for Russia...not the US!

That would be CAMSLANT, which stands for Communications Area Master Station Atlantic. 5.696 and 8.983 are the U.S. Coast Guard aviation primary HF frequencies. 123.100 is a common search and rescue VHF freq., while 381.800 is a common USCG UHF freq.

4923. DJ-X10T info.....

Newsgroup: rec.radio.scanner
Date: 1998-09-04 00:00:00 UTC
From: marvin_d_c@hotmail.com
Message-ID: <35F08ECC.4A80@hotmail.com>
Source record: 145163

I had posted a message asking for info on the ALINCO DJ-X10 receiver, which TECH America is selling for $400 in their new flyer. The responses I got were encouraging, so I drove over and took a look at it. I ended up buying one on the spot! What convinced me was that it was picking up cell frequencies without any modification, even though they are supposedly locked out on the X10T version (which this one is). I noticed that another radio with a higher serial number didn't pick up cell (if you punch in 888, it comes back as 895). The serial number on the one I got was 000895, so it's early in the run, and maybe that is the difference.

Even more interesting, while I was "playing" with it at home, I did a reset and lost the cell function. With some more experimenting, I got it back, lost it again, and got it back again. Needless to say, I quit screwing around while it was still working! As best as I can tell, the secret is to have it turned on, hold the power button down, and quickly use a toothpick to push the little recessed reset button next to the power switch. The unit goes off, and usually restarts automatically, sometimes with cell enabled. Not always, but once it's enabled, it seems to stay that way if you turn the radio off or change batteries. Maybe someone else has more to say on the matter, but for now I'm pleased that mine works as-is. In fact, it's so sensitive that it picks up cell signals with the antenna disconnected!

Now the bad part... When I got back, I found a message saying that the DJ-X10T was available for $359 from: www.aesham.com

Even with shipping, that would be a lot cheaper than what I paid, especially with tax added in. On the other hand, I've got it, it does cell, and another one might not....

By the way, it's not that I care so much for cell coverage. In recent years, it's gotten so loaded with "hi, be home soon, see you then..." calls that it's not worth listening to. I just don't like to have the bozos in Washington dictating what I can and can't listen to in the privacy of my own home. Especially when those same bozos have demonstrated that they can't tell the difference between right and wrong in their own lives!

All in all, it looks like a nice radio, although it's going to take a LONG time to wade thru the instruction manual....

You may want to look at GMRS. This has all the advantages of CB with-out the restrictions of ham radio.
You can use it for both commercial and personal use, and
there is a lot of used UHF equipment available at reasonable prices.
Any local radio shop can give you information.

Unfortunately, the numbering system on the Pro series scanners does
not relate to the improvement of the product. The Pro-39 is a very
good scanner. It is a dual conversion scanner that was replaced later
by the Pro-43 which is a triple conversion scanner. Both scanners are
made by GRE which has made the majority of Radio Shack scanners.
Uniden makes scanners for RS also and has produced quite a few of RS's
latest line of products. Basically you will have to know the features
of a certain model and know the capabilities of the other scanners
before you can successfully decide whether one is better than the
other.

iDEN Technology Overview

Building on more than 50 years of developing wireless communications products-from two-way dispatch radios to pagers to cellular phones-Motorola has developed an innovative digital technology known as iDEN-Integrated Dispatch Enhanced Network. It enables users to take full advantage of the benefits of the wireless world by integrating four communication services into one network, using one phone.

Motorolaï¿½s concept of integrated wireless business communications offers advanced capabilities that bring together the capabilities of dispatch radio, full-duplex telephone interconnect, short message service and future data
transmission.

The iDEN technology is based on a variety of proven RF technologies. Motorola engineers took these technologies and enhanced them in order to gain the increased capacity necessary to support a fully optimized, wireless digital network. The technology offers increased spectral efficiency and full-service integration, two of the main benefits of digital communications.

IMPROVED SPECTRAL EFFICIENCY

The capacity to accommodate crowded markets and worldwide growth is a critical component of iDEN. The development of this spectrally efficient technology allows multiple communications to occur over a single analog channel. This expansion of the network gives users greater access to the network and provides space for new and expanded services to be added without rebuilding the infrastructure.

iDEN represents the most advanced step toward the development of an integrated,
wireless business communications system that can satisfy the long-term capacity demands of the marketplace. The increased capacity is due to a combination of unique technologies-Motorolaï¿½s VSELP vocoding technique and QAM modulation process-as well as the TDMA channel splitting process.

MOTOROLAï¿½S VSELP - CODING SIGNALS FOR EFFICIENT TRANSMISSION

The driving force behind the expanded capacity of iDEN is the reduced transmission rate needed to send information. Motorola has developed a vocoder (short for voice coder) technology that compresses voice signals into digital packets of information that are time assigned, transmitted, and

received on the iDEN network. This vocoder, known as VSELP (Vector Sum Excited
Linear Predictors), compresses the voice signals to reduce the transmission rate needed to send information.

In addition, VSELP provides for clear voice transmission by digitizing the voiceï¿½s essential elements, thus providing high-quality audio under conditions
that might have resulted in a distorted analog voice.

If a speech segment gets lost over the radio channel, the VSELP decoder even can ï¿½repairï¿½ the effect through speech extrapolation. The result is less distortion and interference (e.g., break-up, static, fading) as users move toward fringe coverage area, enhancing the clarity and quality of iDENï¿½s
voice communications.

QAM MODULATION

While the VSELP compresses the signal and reduces the transmission rate, the QAM (Quad Amplitude Modulation) increases the density of the information.
Modulation is the process of adding information to the radio wave that alters
the size and speed of the radio wave to represent the information content of the signal. More advanced modulation, like QAM, can increase the density of the information put on the signal.

QAM modulation technology was specifically designed to support the digital requirements of the iDEN network. Motorolaï¿½s unique QAM technology transmits information at a 64 kilobit per second rate. Higher transmission rates mean squeezing more information onto existing channels, resulting in increased spectral capacity. No other existing modulation technology transmits as much information ina narrow band channel.

MULTIPLIED CHANNEL CAPACITY

Another key element of the iDEN network is the time-proven technology of Time Division Multiple Access (TDMA). TDMA is a technique for dividing the wireless radio channel into multiple communication pathways.

In the iDEN system, each radio channel (which uses approximately 25 kHz of radio spectrum) divides into six distinct communication pathways. During transmission, voice and data information is divided into packets. Each packet
is assigned a time frame and then transmitted over the network. At the receiving
end, the packets are reassembled according to their time assignments into the original information sequence.

THE ADVANTAGE OF INTEGRATION

More than any other criteria, the user of the wireless information superhighway
will demand multi-functional devices that are easy to use. With this in mind,
Motorola designed a comprehensive technology to support integrated wireless business communication services.

With the iDEN network, users need only one phone to access voice dispatch, full-duplex telephone interconnect, short message service and future data transmission capabilities. This integration capability provides business users with flexible communications capabilities that allow users to access information in the most efficient and convenient way no matter where they are
in the system.

For additional details on iDEN technology check out
Motorolaï¿½s iDEN web site at http://www. motorola.com/iden.

Scanner people are invited to join the NYDXA scanner and SWL net held each Wednesday at 8 PM Eastern on the 147.360 repeater in NYC. Those of you who are just listeners can e mail the net on an e mail address that is given during the net. We also publish a monthly newsletter distributed via e mail in the Adobe Acrobat format. All are welcome!

See you there!

4942. police freqs change?

I live in an area where there were some police freqs that were very active, but now on some of them, there is nothing but a few beeps, such as the ones you hear when you scan freqs for pagers. Is it possible that the freqs changed? what is the best way to search for the new channel that they transmit on? thanks for the help.

Well, I guess the question of why comes up.
If you want to transmit on Police frequencies, you first have to know what the frequencies are!.
You then have to get a commercial radio which can cost in excess of 2 thousand dollars. Then find someone to program the radio (good luck :-)).
Even after that, get ready to spend thousands on Lawer fees, and/or Fines, as it is VERY illegal to own a radio that will TX on police bands and even more illegal to do it!

Well, either that, or they are surveillance frequencies.
The local police here go on surveillance 'missions' that may last for
a week and you don't hear them for a month or two. When the frequency
is active, it's active. When it's not, it's not !
The beeping may be intermod.

Barry,
For what its worth I've changed the 455 kHz filter in my PRO-2035 to reduce the interference between 12.5 kHz separated channels. I listen to our 900 MHz trunked SMR systems and couldn't really use the radio effectively until I changed it. Still picks up the regular channels just fine. 12.5 kHz UHF channels are just catching on around here (New Orleans) and we'll soon be putting up a commercial trunked system using the splinter channels. Waiting to see what problems we encounter with adjacent channel interference.

4951. Trunked Radio System

Newsgroup: rec.radio.scanner
Date: 1998-09-04 00:00:00 UTC
From: Herzog <Herzog@contractor.com>
Message-ID: <35EF6041.8050E4A9@contractor.com>
Source record: 145205
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Joseph Watts wrote:
>
> what is a turnked radio system

For organizations where instant, effective and private communications
are a vital part of everyday operation, a trunked two-way radio system
provides the coverage, channel efficiency, security and flexibility needed.

Simply put, trunking permits a large number of users to share a relatively
small number of communication paths - or trunks. Commercial telephone
communication is a wireline version of trunking.

This sharing of communication paths is managed automatically by a computer.
Channel selections and other decisions normally made by the radio user are
made by the central controller, a computerized switch. Channel assignment
is automatic and completely transparent to the individual users.

Trunking offers many benefits, including faster system access, better
channel efficiency, more user privacy and the flexibility to expand. Because
of its
flexibility, a trunked system can expand along with your operation,
to accommodate a growing number of users and restructuring of talkgroups.
And it can be continuously upgraded with software.

With trunking large quantities of users will no longer need to share a
common RF channel and compete for air time. In addition, users won't need
to monitor a channel in order to make a call on their own.

4953. R8500 question

Newsgroup: rec.radio.scanner
Date: 1998-09-04 00:00:00 UTC
From: cak@aloha.net
Message-ID: <6snrf6ahg1@nuhou.aloha.net>
Source record: 145207

I have an Icom R8500 that has developed the following symptom: on power up it operates normally for a few seconds, then the "receive" indicator goes out and the audio disappears. After a few more seconds, the frequency display begins to blink. The manual does not seem to be helpful.

It seems to me that this is probably an LO in marginal lock, but since I'm not particularly familiar with this receiver, it is also conceivable that I have it in some odd mode, so I am looking for suggestions before I dig into it. I have tried resetting the CPU - no change.

They are in Massachusetts too...
But of course this is just their company owned trunking systems. This way they can sell the frequencies to Nextel for big bucks and still supply all the radios. They loose the hassles and make more money.

I don't think many people bought their trunk trackers to listen to these commercial systems. They bought them to listen too the massive public safety systems that aren't going anywhere fast...

4956. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 1998-09-04 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6sntdu$3u1@news.Hawaii.Edu>
Source record: 145210
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)
(rec.radio.amateur working-group)
```

I went into a RS I hadn't bought anything from in a while(it's in a mall and I was just killing time while my girlfriend was shopping) and I realised I needed about a foot of RG8. I was told that they dont sell cable by the foot anymore. I was visibly schocked and the guy said he might have some in the storeroom he was going to send back. He came out later with about 3 feet of cable and said to just stick it in my pocket. I asked about buying a catalog because I felt bad about not paying for it. He then went to the front got a catalog and a RS bag and said "come back soon". I got a catalog and my cable all for 0.00!

Ok. I am a EE and my field is radio engineering.My senior project was a doppler shift generator. It calculated the incoming radar freq. and re-transmited that plus the doppler shift at whatever you wanted to set it to. Not really all that complicated but it did require a really neet antenna that one of my profs designed for me and the need not to go faster than about 10-15 miles +- the speed you are traveling. (Idid get an A) .It is really a work of art and if anyone is interested I will send a better description and some of the parts you might need. It might be kind of expensive to build. This is very illegal to use though but I think it would be hard to grid you in a moving vehicle. Some of the posts seem intelegent enough but what about the rest of you guys. READ UP!
Thanks RQ

>

If you really want to go to the trouble to
"mod" up a way to listen to cell phones,
find an older cell phone for cheap at a
garage sale or flea market. All of the older
motorola bag phones, brick phones and
flip phones can be put into "test mode"
in a couple minutes with nothing more than
paper clip. In test mode you can tune the
phone to any cell freq. you want.

Used cell phones can be had for a few
bucks if you're good at scrounging and they
were originally designed for this purpose,
unlike a general purpose scanner. Look for
a file, "Motorola Bible" available at dozens of
sites around the net for complete instructions.

Of course, cell eavesdropping is unethical, illegal (in the US),
and gets boring pretty fast (so I've heard). Maybe this info
will save a classic scanner or two from "death by cell mod".
Plus you get to feel like"Macguiver" when you first tune the
phone with a paper clip.

It is not illegal to own a radio capable of transmitting on police
bands.

4971. Re: Pc conection for a Alinco DJ-X10

Newsgroup: rec.radio.scanner
Date: 1998-09-04 00:00:00 UTC
From: dickfinch@my-dejanews.com
Message-ID: <6sovchsvq1@nnrp1.dejanews.com>

Does the ICOM OPC-478 plug directly in the RS232 port of the PC or is some other hardware required. The Alinco site says the 'connections on the interface end require a stereo reducing adapter'. Surely there is a 9/24 pin RS232 plug on this end?

Or am I missing something?

Thanks for your help.

Yeah sure,and I'm king of the universe.I have to ask a couple of questions to Motorola and whoever else is behind this sorry excuse for a "communications system".
First: In the Toledo Ohio area,the system goes down almost DAILY,usually around 6AM or so,we get "no service",or Wait;Connecting",or the party you are trying to call "not available".When it does work,it sounds like shit,worse than an old FM tuner I had sounded after it got zapped by a lightning strike!THe question is,how the hell did you release such a pitiful product,and how do you have the nerve to say on the box "Chrystal Clear"?Damn,I'd hate to hear what you think is bad!Most of the time,the TX audio is over or undermodulated(usually over),and we have to repeat ourselves all the time,it's really annoying....
Second:This is a case of a good idea being destroyed by a bad execution.Why didn't they wait until the system was WORKING RELIABLY,with ACCEPTABLE AUDIO,not like you are drowning or screaming into the radio?Why the lousy ALC?it doesn't seem like it should be that hard to at least get the audio LEVEL right.Now about the "speaker",if you can call it that.If you set the volume so you can hear it in a noisy environment,you hear the "ping" ,and then hear"rahhhhrahhh rrraahhh rrah rrah",you have to have them repeat it,after you push the buttons a couple of times,and then you USUALLY CAN understand it,IF they aren't overmodded,then you have to repeat it AGAIN!I have to fight the impulse to just take the thing and smash it to pieces!This morning,I tried to call 3 different people and NONE of them heard me!Then after a couple of minutes,it was working.Of course.
If Motorola keeps putting out stuff like this,and the Toledo trunk radio system(sounds great too),they deserve to be put out of business!
End of rant.....

Barry

4973. Help with PRO-2006 MOD

Newsgroup: rec.radio.scanner
Date: 1998-09-05 00:00:00 UTC
From: packrat@nbnet.nb.ca
Message-ID: <6sseua$lt7$1@garnet.nbnet.nb.ca>
Source record: 144977

I need a little help, obviously. I recently put together the equipment for the computer interface mod for my PRO-2006 that I found at John Montalbano's website. I finally hooked it up tonight, but it doesn't appear to be working correctly. I tried to e-mail John Montalbano before, but my message got returned.

I'm wondering if anybody would be willing to e-mail me to help me figure this thing out. With everything wired up, the keypad on the scanner doesn't function. If I desolder the interface, disconnecting it from the scanner, the scanner seems to behave normally. Does anybody have any experience with this stuff that they might be willing to share? I'd greatly appreciate the help.

My e-mail address is:

packrat@nbnet.nb.ca

Thanks in advance!

BTW, if you post a reply to this, I'm unlikely to get it. I'll try, but my IP's news server is about 6 hours behind and the server it gets its information from deletes it after 6 hours. :(

>When did it become an offense for someone to carry a ham radio around
>if not licensed in the service? I think the cop was yanking his chain!

The cop probably didn't know what the radio was and assumed it was a scanner. And this is the problem (among others) with these sorts of laws: a police officer is not a communications expert. Most of them do not know the difference between a handheld scanner, a handheld ham radio, or an Archer Space Patrol walkie-talkie. If it "looks" like a scanner and the cop is either having a bad day or needs one more ticket to fill his monthly quota, you get the citation and/or confiscation of your equipment. Then, the financial burden is on YOU to take time off of work and go to court to prove your innocense.

If you haven't even bothered to follow-up with Grove Enterprises about
it, the problem is mostly on your end, not theirs! They're often
overpriced, but have excellent customer service.

Florida's scanner laws ned some serious re-working. Thank goodness
California cops don't really care about scanners in cars and couldn't do
anything about a scanner anyway. Just don't use it in the commission of
a crime and you are fine.

I think if I lived in Florida, I would be doing some serious letter
writing to my state "politicions"

I recommend the shareware product
"Radio Manager" found at
http://www.interplaza.com/bensware/rm.htm
and supports many different radios.

And I really like the OptoElectronics "OptoLynx"
found at
http://www.optoelectronics.com/optolinx98.htm
and is currently at $109. That may be a little
spendy, but it's a great little unit and will support
three different radios at once.

I just got re-started in radio and I acquired both
of these within the last 30 days.

Infortunately, people are still causing problems here, some under the
name
of Bill. In all fairness, I would not want to see him unjustly
punished.

> If you continue to post off topic BS
> people might start contacting abuse@mci.com to complain about you!

That is fine. I have never lost an ISP account yet for any reason
so I am not worried about it. Thanks for your concern.

It's easy & is certainly not stalking. Do a search for
"(TO reply via e-mail, change .org to .com.)" on dejanews.
It come up as a match for Bud Jamison MANY times but not at all
for Bill.

Hmmm, the coincidences between Bud's post & the forges add up!

> Also, the posting host would be the same, no matter who posted out of that

> IP# by the server,from it's customary range, wouldn't it?

Correct! Notice that both IP#'s were the same for Bud & the forged
messages!

> Now, I'm not POSITIVE about all that, and I might have it backwards in

Merry-

Then why didn't he post them under his own ID rather than forging
a defunct ID of Bill?

Why can't you just accept the facts & let this issue drop?

> If that is, indeed, the case, why would they need a newsmaster?

There is a webmaster, postmaster, & newsmaster for the parg.org system
to
address areas of concern or abuse for PARG.

For example, when Richard Kendrick & Blake Bowers was forging PARG.ORG
e-mail addresses & using it to create problems on usenet, the webmaster
took action. The fact that parg.org does not have their own news server
makes little difference in matters like that.

Lets just drop this thread, OK? Is it quite boring.

In all fairness to Mr. Cheek, I don't want to see him unjustly accused.
I asked the person who made the statement (of Cheek getting kicked off
a NG or list) to post details to prove his accusation. We have yet to
see
proof, so we can only conclude that there was no basis in that
accusation.

Apparently, you don't believe in being fair & making people back their
words with facts.

This is all getting quite old, please drop it for the good of this NG.

True, I am a radio hobbyist & enthusiast and I don't limit myself
to scanners as you do. I have much broader & deeper interests
in the radio hobby than limiting myself to scanner listening as you do.

> BTW, when was the last time you posted something related to scanners &

> were posted by Bud at Bill's request ????

Either it was a forge with intent to deceive by Bud or it was a post of
Bill's
with intent to deceive. The e-mail address used on the post was invalid
& was revoked by the ISP due to repeated abuse by the user. Bill has an
account at cts.com & has made other newsgroup posts elsewhere within the
last few days so he could post from a legit account if he wanted to!

> It's a possibility since you got Bill's ISP account yanked.

I did not get Bill's account yanked, I do not have that authority.
I was one of the many people who complained to Bill's ISP about
his behavior, Bill's ISP of "San Diego Road Runner" (san.rr.com)
made the decision to "yank" his account due to his behavior after
he received several warnings. Just like Bill was removed from the
Scan-L mail list by Peter Laws after several warnings due to his
behavior only a few weeks ago.

Think about it .... and lets let this issue drop!

No problem Tom! If you know what to look for, it is easy to see
the "giveaway" of the forge that Bud Jamison did of Cheek.

See the two messages I have attached below. The first one is the forged
post of Cheek that Bud Jamison wrote. The second is a real post from
Jamison. Notice that the "X-newsreader" is IDENTICAL!!!! Notice that
the "NNTP-POSTING-HOST" is IDENTICAL!!!! Now for the real
CLINCHER & proof of guilt - Bud Jamison forgot to change his
signature file that is automatically attached to the end of his
messages!!!!!! (TO reply via e-mail, change .org to .com.) Cheek
has NEVER had a signature file like that!!!!!!

AN OVERVIEW OF THE CE-232 SCANNER/COMPUTER INTERFACE
==========

This article is copyrighted (c) 1998 by Bill Cheek. Permission to reprint for FREE access and FREE use by others is automatically granted so long as this entire article, including signature box at the end are retained intact, unedited, and unaltered.

WHAT IS THE CE-232?
==========

The CE-232 Scanner/Computer Interface is a 2.5" x 3" electronic board with a socketed 68HC11 microprocessor and seven IC's that goes between the COM1 or COM2 port of an IBM-PC/XT/AT/386/486/Pentium-compatible computer and a supported scanner.

The CE-232 is a -smart- RS-232 Interface controller AND powerful data acquisition system for some scanners and at least a drudgery-free automatic programmer and remote controller for all supported scanners.

FEATURES AND BENEFITS for all supported scanners
==========

AUTOPROGRAMMER (all supported scanners)
REMOTE KEYBOARD CONTROL (all supported scanners)
AUTOLOGGER (PRO-2004, PRO-2005, PRO-2006 only)
AUTOREJECT (PRO-2004, PRO-2005, PRO-2006 only)
AUTOLOOKUP (PRO-2004, PRO-2005, PRO-2006 only)
SCRIPT AUTOMATION (primarily for the PRO-2004/5/6, but
can work to a limited extent with other
supported scanners)
ENHANCED USER FACILITIES (primarily for the PRO-2004/5/6, but can work to a limited extent with supported scanners)

COMING SOON: Windows95/98/NT control program and support for the CE-232's eight 8-bit A/D converters

The CE-232 offers the above very powerful capabilities that are described below in greater detail. This Overview article and any other files mentioned below can be downloaded from our FTP site at:

ftp://204.210.11.204/ce232/Info/

AUTOPROGRAMMER (all supported scanners)

The CE-232 eliminates the drudgery and hard labor of scanning by its ability to "AutoProgram" up to 999 memory channels from a

plain ASCII text file in a short time, error-free and exactly the
way you want it.

For more information on the AutoProgrammer, see:

Article Title	Text filename
CE-232 AUTOPROGRAMMER	1_autpgm.txt

REMOTE KEYBOARD CONTROL (all supported scanners)

The CE-232 also allows control of the scanner from the computer's
keyboard; a strong plus for handheld scanners and those with
hard-to-operate keyboards, like the PRO-43, PRO-2035 and PRO-2042.

The CE-232 is a one-way controller and AutoProgrammer like
described above for MANY scanners, including the PRO-2042,
PRO-2035, PRO-2022, PRO-43, PRO-39, PRO-37, PRO-34, PRO-26, etc.

For more information on the Remote Control feature see:

Article Title	Text filename
CE-232 REMOTE CONTROL	2_rmctrl.txt

FEATURES AND BENEFITS for the PRO-2004/5/6 Scanners

The CE-232 is a TWO-WAY controller and data acquisition system for the
time-honored PRO-2004, PRO-2005, and PRO-2006 scanners which have unique
circuitry that allows the CE-232 to do a LOT more than just AutoProgram and
Remote Control, including log data on "hits", reject undesirable signals,
look up data about a certain frequency, and much more described below.

AUTOLOGGER (PRO-2004, PRO-2005, PRO-2006 only)

The CE-232 acquires and logs data to a file with the AutoLogger
feature. The AutoLogger creates plain ASCII text files that are
easy to export to a database or just to use in original form.
Most every aspect of the scanner's operation can be AutoLogged,
notably including channel, frequency, date, time, and duration of
the transmission; but much more, too.

For more information on the AutoLogger, see:

Article Title	Text filename
CE-232 AUTOLOGGER	3_autlog.txt

AUTOREJECT (PRO-2004, PRO-2005, PRO-2006 only)

The CE-232 can AutoReject "birdies" and any other undesired signal
so that the Search and Scan functions won't be disrupted by the
scanner locking onto signals that don't interest you.

For more information on the AutoReject feature, see:

Article Title	Text filename
CE-232 AUTOREJECT	5_reject.txt

AUTOLOOKUP (PRO-2004, PRO-2005, PRO-2006 only)

The CE-232 can LookUp and display information about the
frequencies that are programmed into the memory channels. If you
have all 400-channels programmed, or even a hundred, there's no
way to remember right off what each frequency is assigned to. The
AutoLookUp feature can lookup the information and show it to you
on screen, within an instant of the scanner stopping on that
signal.

For more information on the AutoLookUp, see:

Article Title	Text filename
CE-232 AUTOLOOKUP	4_lookup.txt

SCRIPT AUTOMATION (primarily for the PRO-2004/5/6, but can work to a
limited extent with other supported scanners)

The CE-232 comes with a Script language of about 40 commands, six
operators and a handful of parameters that let you automate the
entire process of scanning and searching!

A Script resembles a DOS batch file or a simple BASIC program, but
it's easier than either. Automation of scanning and searching
doesn't take the fun out of it; to the contrary, it opens up a
world of radio that you may never have had the time for in the
past.

Scripts can make logical decisions based on IF - THEN - ELSE - AND
- OR logic, so "IF this happens, THEN do that; ELSE do something
different". There is no real limit as to what you can accomplish
by scanning with a Script.

For more information on Script Automation, see:

Article Title	Text filename
CE-232 SCRIPTS	7_script.txt

ENHANCED USER FACILITIES (primarily for the PRO-2004/5/6, but can work
to a limited extent with supported scanners)

The CE-232 offers several special features that can't be described very well because they are reserved for the User to decide how and for what they are used. Here is a brief explanation, though:

USER SWITCHES: Four solid state switches are on the CE-232 board for the User's pleasure. These are SPST switches that can be controlled from the PC keyboard, or by automation from a Script. In other words, the User Switches can control a host of other mods and unique circuits. If you want something to be turned on at 3:00AM on September 30, 1998, so be it - a script can do it for you! The status of each User Switch is AutoLoggable for a permanent record.

INPUT STATUS: Six input binary registers or ports are available on the CE-232 for the User's purposes. The Status Input bits accept 0v and +5v, and thus, serve a lot like "idiot lights" in a car. These six bits are displayed in the main screen of the CE-232 control program. If you need an indicator that can also be recorded and AutoLogged (like for an S-meter!), then the Input Status bits will do nicely!

INBYTE BITS: Eight more input binary bits or ports, exactly like the STATUS INPUT bits described above, are available for the User's purposes. The only difference is that the INBYTES are not displayed on the main operating screen, though there is another screen on which their status can be viewed. Like the Status Input bits, the INBYTES can be AutoLogged, tested and read by a Script; and decisions made in an automated manner.

OUTBYTE BITS: Eight output binary bits or ports on the CE-232 board are available for the User's purposes. Just the opposite of (B) and (C) above, the OUTBYTES are user-controllable logic-level outputs of 0v and +5v. If you need a logic bit to turn something on or off, the OUTBYTES just might be the ticket!

NOTE: each bit of the Status Inputs, InBytes, and Outbytes is independent of all the rest. No one bit will affect the status of any other. Therefore, there are 14 Input bits and eight output bits that are completely available to the User for his purposes. The four User Switches can be used independently as four separate switches, or together to create a 4-bit binary "byte" for sixteen combinations of switches or whatever.

For more information on the User Facilities, see:

Article Title Text filename
========== ==========
CE-232 USER FACILITIES 6_tools.txt

NEW FEATURES COMING SOON!

Windows95/98/NT Coming soon! A control and data acquisition
program for the CE-232 Scanner/Computer Interface
that runs under Windows 95/98/NT. Stay tuned!

ANALOG-TO DIGITAL Coming soon! Support for the CE-232's resident
CONVERTER (A/D): analog-to-digital (A/D) converters. Yes, the CE-232
has eight 8-bit A/D converters just waiting and
begging to enhance your data acquisition needs!
Two uses come to mind right off: S-metering and
Center-Tune metering. And, yes, the A/D outputs
are AutoLoggable! Now it's possible to identify
transmitters by relative signal strength AND by
how much they're off frequency! "Fingerprinting"
comes of age! More on the A/D converters soon!

WHAT ARE THE MINIMUM HARDWARE REQUIREMENTS?

The CE-232 is supported only for the IBM-PC/compatible, however we
know a gentleman who supports it for the Macintosh platform.

The PC platform requires MS-DOS 3.1 or higher, with 512-k RAM (min), a
free COM1/IRQ4 or COM2/IRQ3 port, and a hard disk drive with about
3-Mb of free space. The CE-232 also runs fine in a DOS box under
Windows 3.1, 3.11, and Windows 95/98. The CE-232 can be configured to
run from a floppy disk for old XT/AT's and old laptops that don't have
a hard drive or not enough free space. Floppy disk operation isn't
especially recommended, but there are situations where nothing else
will work.

The scanner must not have been speeded up by any crystal replacement
means. However, diode speedups are okay, as are all other mods that
come to mind right off. We do not support "other mods" to work with
the CE-232, but only because we have no control over what the User
does and doesn't do. But frankly, the only mod we've found over the
years that's incompatible with the CE-232 is the crystal-swap speedup.

WHO CAN BUILD AND INSTALL THE CE-232?

Virtually anyone not unduly physically handicapped. Soldering skills
are certainly helpful as is a basic savvy of electronics. I have,
however, guided many a non-technical hobbyist to success at assembling
and installing the CE-232 Interface. The main thing here is PATIENCE
and the ability to read and follow instructions in English. Depending
on your skill level, free time, and patience, the CE-232 is available
in several different ways, one of which will suit most people.

AVAILABILITY

The CE-232 is available in four different ways:

1. Roll your own, by yourself, totally from scratch. The complete plans, schematic diagrams, and PCB layout, including parts list, are presented in THE ULTIMATE SCANNER (Cheek3) by Bill Cheek, ISBN: 1-56866-058-8. This book is sold by mail order radio dealers around the world, and I carry it, too. (autographed)

2. Roll your own from a professional Kit of all essential parts, including PCB, detailed instruction manual, and program disk. I can supply this Kit.

3. Roll your own from an Assembled and Tested Board, with detailed manual, and program disk. I can supply this Kit, as well.

4. I can do everything, from build the CE-232 to install it in your scanner and test it for proper operation.

For more information on availability and prices, see:

UNDERSTANDING AND MAKING AUTOPROGRAMMER FILES
FOR THE CE-232 SCANNER/COMPUTER INTERFACE

One of the singular greatest advantages and features of the CE-232 Interface is its ability to AutoProgram a scanner's memory banks with FREQUENCIES by CHANNEL NUMBER and other custom settings of MODE, DELAY, and LOCKOUT. Beauty lies in the simplicity by how this is done; that is, from a plain ASCII text file. No proprietary or complex formats here, Bunky; just plain ASCII text. The CE-232 uses a variant of plain ASCII text called a comma-delimited format, but which we call an AutoProgrammer or *.APF file.

If you don't know about ASCII text, there isn't much I can do in this limited space and forum to help. But I will clarify to the extent that any files created with Windows NOTEPAD.EXE or MS-DOS's EDIT.EXE, or (heaven forbid) EDLIN.EXE will, most assuredly, be plain ASCII text files. Most text editors and even word processors are capable of creating plain ASCII text files, but you have to be cautious with word processors because they usually embellish text for printing. The printer control codes, fonts, and other embellishments take this type of text out of the plain ASCII category.

1. The cardinal rule for CE-232 AutoProgrammer files is that they must be in plain ASCII text format (like *.TXT, except that we use the *.APF extension.)

You really need to know a little something about data, databases, data organization, and logic, too. Nothing real weird or horrific, mind you; just some basics. After all, your AutoProgrammer (*.APF) files really are databases if you want to get technical about it.

The simplest of all databases is a table. You know, a block of information, organized into meaningful rows and columns. Now here is the only real technical part to understand and remember: rows are really called records, and columns are really called fields. Here is an example of a table that will mean something to you:

TABLE 1: A FREQUENCY TABLE
A B C D E F G
1 7 21 168.0110 nfm D L Audio Intelligence (Body Bugs);Yellow
2 7 22 168.0620 nfm D L Audio Intelligence (Body Bugs);Green
3 7 23 168.0860 nfm D L Audio Intelligence (Body Bugs);Blue
4 7 24 171.6500 nfm D L Audio Intelligence (Body Bugs);Red
5 7 25 171.9500 nfm D L Audio Intelligence (Body Bugs);Silver

Obviously, this is a frequency table. Rows 1-5 are just Records 1-5. Columns A-G are just Fields A-G. With exceptions of Fields A, B, E, and F,

you can tell at a glance what all this information means. Now consider that Field A is an identifying group number for this table of frequencies.

Field B is the program channel number. Field C, obviously, is the frequency. Field D is the mode setting for that frequency. Field E is an indicator of Delay setting (D if set; blank if not). Field F is an indicator of LockOut setting (L if locked out; blank if not). Finally, Field G is a description. What more do you need to know about a frequency table?

Well, there are a couple of minor things, like limits and restrictions. You'd have a problem making any sense out of the table if the columns or fields weren't the same width, which necessarily restricts the amount of information that a field can hold. Physical width is usually the criteria for fields in tables printed on paper. Number of characters per field is the criterion for computer tables. There are restrictions and limits for all tables of information, and *.APF files are no different.

2. A *.APF file must consist of one or more lines, each to contain not more than 255-characters, maximum. Each line, properly called a record, must end with a carriage return <CR> and a line feed <LF>. (This is normal for text files.)

3. *.APF files are organized just like tables on paper, except that instead of spaces or lines between columns or fields, commas are used to separate one field from the next. Six fields of information are required by a *.APF file with definitions, limits, and restrictions shown as follows:

Field A: (Alpha/numeric; 0-12 chars, max); an optional "filter" field. Used to identify a record or group of records. For example, you might have several different frequency files and want to tell at a glance which record belongs to which group. GOV-DEA might be a chosen identifier for "Government-Drug Enforcement Administration" frequencies.

Field B: (Numeric; 0-3 chars, max); an optional "channel number" field; denotes the channel number that should be programmed with this record

Field C: (Numeric; 9 chars, max); the required "frequency" field, best organized as four digits, decimal, and four more digits, such as: 0121.5000 although any format accepted by your scanner is fine. This could include any of the following: 121.5 121.50 etc. It wouldn't hurt to get in the habit of entering all your frequencies in the "4-dot-4" format, which helps the numbers line up for best visual effect. Leading zeroes are acceptable in Fields B and C, like: 025 and 0171.6500. Leading zeroes help align data and make it look better.

Field D: (Alphameric; 0-3 chars, max); optional field for Mode setting. Only four entries are legit: <blank> which tells the scanner to use the default mode for that frequency, or <nfm>, <am>, or <wfm>. Some scanners, like the PRO-43, won't recognize the <wfm> setting, so it may or may not matter what you put in this field.

Note: What matters is that any entry in this field must be lower case, due to a bug in the CE-232 program. Upper case is ignored. Mode is the only case-sensitive field.

Field E: (Alphameric; 0-1 char, max); optional field for Delay setting. Two entries are legit: <blank> which turns off the Delay, or <D> which turns it on.

Field F: (Alphameric; 0-1 char, max); optional field for LockOut setting. Two entries are legit: <blank> which turns off the L/O, or <L> which locks out the channel.

Fields G and up: (Alphameric/numeric; no special limits other than no line or record can exceed a total of 255 characters, including the total of Fields A-F.) Fields G and up are purely optional and can be in any format or logic that suits your fancy.

4. A CE-232 AutoProgrammer file requires six commas, at a minimum, but ignores any more than six. Commas are used to separate one field from the next. Commas are separators; not starts and ends. The six fields are required in the following form:

aaaaaaaaaaaa,bbb,cccc.cccc,ddd,e,f,g-z.....doesn't matter

Six commas and a legit entry in Field C are required for APF files, but the other five fields are optional. Table 2 shows a minimum legit APF file created from Table 1:

A TUTORIAL ON
THE CE-232 SCANNER/COMPUTER INTERFACE'S
REMOTE KEYBOARD CONTROL FUNCTION

INTRODUCTION
============
The CE-232 Scanner/Computer Interface is a 2.5" x 3" electronic board that goes between an IBM-PC/compatible computer and a scanner for a host of very powerful capabilities.

The CE-232 is a -smart- RS-232 Interface controller and data acquisition system for some scanners and at least a drudgery-free automatic programmer and remote controller for all supported scanners.

The CE-232 eliminates a lot of the drudgery and labor in scanning by its ability to "AutoProgram" up to 999 memory channels from a plain ASCII text file in a short time, error-free and exactly the way you want the scanner configured.

The CE-232 also allows REMOTE control of the scanner from the computer keyboard; a strong +plus+ for handheld scanners and those with hard-to-operate keyboards like the PRO-43, PRO-2035 and PRO-2042!

The CE-232 is a one-way controller and AutoProgrammer like described above for MANY scanners, including the PRO-2042, PRO-2035, PRO-2022, PRO-43, PRO-39, PRO-37, PRO-34, PRO-26, etc.

The CE-232 is a TWO-WAY controller, AutoProgrammer and data acquisition system for the time-honored PRO-2004, PRO-2005, and PRO-2006 scanners which have unique circuitry that allows the CE-232 to do MUCH more than just AutoProgram and Remote Control, including AutoLog data on "hits", REJECT undesired signals, LOOKUP data about a certain frequency, and much more.

REMOTE KEYBOARD CONTROL OVERVIEW
================================

** Operate the scanner from the Computer's Keyboard! **

REMOTE CONTROL FROM COMPUTER'S KEYBOARD:

Virtually all functions of supported scanners can be operated from the PC keyboard. If you have club fingers like I do, this is almost a vital

necessity. I just love my PRO-43 but I loathe operating its keyboard.

The CE-232 displays a replica of the scanner's front panel on your monitor along with a keypad emulator to show the keys to be pressed as if you were operating the scanner in a normal manner. The Figure just below is a reasonable facsimile of the main operating screen of the CE-232:

```

==========
===

This Figure doesn't really do justice because of the difficulties of showing screen graphics in an ASCII text message like this newsgroup article. But you get the idea? Well, just in case you don't, in the above example, to operate the scanner from the PC, you'd press <M> for MANUAL; <E> to change SPEED; <O> to change MODE; and <T> to change the STEP increment, etc. For Remote Keyboard Control, the above screen is mostly just a guide to indicate which PC keys control which scanner functions.

That's really all there is to Remote Keyboard Control of a scanner using the CE-232 Scanner/Computer Interface. If you can operate the scanner from its own keyboard, then you can be more efficient and relaxed operating it from the PC's keyboard.

NOTE: The CE-232 does not slow down the scanner nor alter its peformance in any manner! Not only can you operate the scanner from the computer's keyboard,
you can also operate normally from the scanner as well. You can even "mix" operations alternatingly between the scanner's keyboard and the PC's.

NOTE FOR PRO-2004/5/6 ONLY: As the scanner operates, the computer monitor displays EVERYTHING that the scanner shows in its LCD display. For all other scanners, that part of the monitor display is just blank. Remote Control is as described, however.

From shopping in various RS stores I know that most of the employees are inexperienced and poorly trained. However, my local store stands out as an exception. The three sales people have all been at the store for at least five years, with one having worked there for 11 years. Only the manager is fairly new, having been at this store only two years.
While they are not experts on scanners and shortwave radios one clerk is a licensed ham and another an avid CBer, so they have a basic understanding. The third clerk is the resident computer whiz.

Hi Folks:

Am selling oldie but goodie leftovers from misc. sources
(hamfests, trades, etc.); several of these still floating around the plant.

ELECTRA Bearcat BC-W Weather Alert Radio - 2 available at present
one has 162.400/162.550/162.475 MHz frequency select switch. (one has
162.550 MHz only)
has DC battery (4 C Cell) holder built in; also 110 VAC plug/detachable cord
Alert Indicator (Flashing Bar) - Volume Control Slider
Test Mode - On/OFF Accuator Bar - Telescoping Antenna
1050 Hz National Weather Service Detector Circuit
(turns radio on from squelched monitoring mode)
Monitor Mode LED Indicator
good audio output, rf sensitivity, In working order.
external Motorola type antenna jack

Asking $35.00 each, includes shipping U.S. Mail.

Also seeking a good home (make offer):

2 Bearcat 210XL Scanners (works OK)
1 Compuscan CP2100 (as is, interfaces present)
1 Bearcat 220 (needing a LED display repair, may have)

Please advise if interested.
Sincerely, David A. Lovell

Hey Bud Jamison, you're getting better with your forging!! At least
this time you remembered to remove your signature file before
forging a message for Bill!

But the FTP sites you list for BIll are no longer valid
since Bill was kicked off of his ISP for abuse!

Don't overlook the fact that MD will use the frequency of the requesting police jurisdiction a lot of times. I've actually heard PG County put an officer in a Park Police copter to coordinate during a search one night.

There is also software (WINTONE PRO) at www.steacksandwich.com that is used as a PL monitor. This program will also log active airtime to the hard drive, of course you need a sound card. You can actually limit the logging to selected PL tones also.

$18 if they have to go behind the counter for it and $36 if they have to go to the stockroom. If they have to ask the manager where it is, that's an extra $12 and if you ask for the free battery discount card at the same time - you don't even want to know!

I'll bet everybody on this, if Charles Tandy and Walt Disney had been able to see what would be going on under their names in 1998, they would have followed A. Atwater Kent's lead and dismantled their companies before they died!

So Bud, what do you call your forging of Cheek?

> about it. Parg.org is not about to do anything, since Mr. Mackey holds at
> least the position of postmaster there, any complaint TO that organization
> goes directly to him.

Wrong on at least 2 counts!

First - I am not the postmaster of PARG.ORG.

Second - Complaints do NOT go directly to me as you indicate.

Complaints of newsgroup issues from the PARG.ORG system are handled
by "newsmaster@parg.org", which is NOT me.

Depends, a newer modular home, bigger than 24 feet wide will almost always have 2x6 walls instead of 2x4's. So much for "flimsy trailers", huh. I am looking at a RS wall-thru tube & it is long enough to do it, it is made to go through block or other thick walls. You cut the tube down for regular stud walls.

Hey John, I've just got one question and then you are free to go about your business:

*** Who the hell cares? ***

I mean really. The guy ain't even darkening the doorstep of this place anymore and you still can't let it go. I can hear it now: "Not while the cheek-a-likes are still here!"

Lemme clue you in on somethin'. Are ya sittin' down? Great. Here it is:

This is a discussion group about scanners. See? And not just any scanners - RADIO scanners. Last I checked it wasn't about Bill Cheek or John Mackey or even me. It's about scanners - something which I have never, ever seen you talk about specifically.

Oh sure, you talked about coax cable, and you listed a frequency or two, but I have yet to see a post about a scanner - ANY scanner. Not in any of the thousands and thousands of messages you have posted here. I looked. I actually read most if not all of your ramblings and not one specifically had to do with scanning. In fact of the maybe 6 messages I'd even consider close to "on-topic", the main motive behind it was not to enlighten the public, but to slam Bill Cheek in some fashion.

Un-frigging-believeable.

I have seen pathetic behavior in my day but this.... this really takes the cake. Tell me John, why do you do this? I just wanna know why. Not in any hopes of changing your behavior, but just so I know what the hell your major malfunction is. Were you somehow traumatized by a radio scanner as a child? Did everyone get scanners for Christmas except you? Did a scannist pick up a phone conversation of yours and use it against you? C'mon John, you can tell us - we're here to help. Really.

Thanks, and have a bandit day.
-Phil

P.S. - my offer to have an on-topic discussion with you is still open. Why haven't you accepted? I know - you didn't receive that post, right?

Yeah. That's gotta be it....

You are either a stupid man or do not read very well. Mr. Cheek's faq's say it is okay for them to be given away free of charge as long as they are not edited. Whoever postred them gave them away free of charge and did not mnake any copyright violations. Mr. Cheek is a smart man and I am glad to read his posts and I don't care who posted them. He knows a lot more than you, Mr. Sickey Mackey. Merry

I have two complete, essentially unused KDT480 mobile data terminals for sale. MDC4800 protocol. I only seem to have one complete set of cables (install kits) but have multiple mounting brackets. These are the CRT based units comprised of the following parts:

CRT Unit- NTN5740
Keyboards- SLN4540
Processor unit- D2711cg
Radio- D2903ag

I also have a three spare radios, and one spare CRT, and one spare keyboard.

Sold as a lot only: $1200 OBO/Trade

Prepaid or UPS/COD Cash.

Not sure if has anything to do with the Swissair crash. Hear lots of "rescue 17-17" and similar "rescue" calls but they do NOT seem to be associated with the Swiss air crash. Sounds like the Air force Global HFsystem to me.
Heard one report of a cooler on a rope found but no location heard for it.

This is a scanner group -- we talk about scanners.

BTW: The world doesn't revolve around Australia, so I recommend you post
VALID information for the US when necessary. You post incorrect cellular and
cordless frequencies all the time.

If you need to post for Australia, do so in the Australia Scanner newsgroup.

Shannon:

You don't need the expensive Icom CT-17 interface adapter, unless you want to control more than one Icom radio at a time. Grove Enterprises sells a simple PhonePlug-to-DB9(RS232) plug, interface cable, that will couple your R10 to your PC. I think it cost around $40.00. Icom sells a simple DOS based utility to upload/download frequencies. There are several third party companies that also sell software for the R10.

5073. Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-09-05 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <3601a7a4.7697142@news.iaw.on.ca>
Source record: 145113

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.
You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to give it a try, you can download the
program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

Source record: 145125

I keep trying, but the 4th digit keeps getting kick to the curb, and the frequency rounded off. I know with the universal delay the 9000 isn't the best way to monitor trunked systems, but this is for more of a test. There's a police dept. that's farther than most in my area, but definitely should be within range that uses trunking. I want to hear if it would be worth looking into a trunker.

Oh yea, what & where have I been forging? (Put up or shut up!)
You won't be able to post any proof because I haven't forged.

> And Bill Cheek's FAQ's on scanners really burns your butt, doesn't it? What is
> it about those posts that bother you?

I don't care either way about Bill's FAQ's. But they aren't Bill's
posts. Someone else besides Bill Cheek (it was Bud Jamison) forged the
posts under a previous ID of Bill Cheek (Before Bill was kicked from his
ISP
for abuse). PLUS, when Bud made the forged posts of Cheek he posted
copyrighted material, a clear legal violation.

> Are you saying they weren't
> written by Bill?

No! I believe they were written by Bill, but they were not posted by
Bill. Someone attempted to forge Cheek & post his copyrighted material.

> Bill wrote them. I've seen them before. I compared them to
> previous posts that I saved last year. They're identical. Bill Cheek wrote
> them.

I agree, Cheek wrote them. But someone else posted them using a old &
no longer valid identity of Cheek. That was Bud Jamison!

So what is your problem?

That is pretty interesting since I OWN ALL the repeaters I talk on
in Oregon & Iowa. So are you saying I got in trouble with myself?

Hi PDoddy(Paul), thanks for the kind words to let people know that I'm a square deal type of person. Sorry to see that you are selling the 9000 so soon but I know it's your past time. To buy, try out and then resell radios. I had hoped you would keep this one for a little while longer but I understand. I enjoyed talking to you on the phone and wish you the best. For all the skeptics, the MVT9000 is a perfect working radio with tremendous capabilities. Paul had told me about the scratch as soon as it happened thinking I'd be upset. As far as selling the radio for more than it's worth, you may shoot for a negotiated reduction, who knows. I know to buy it and have it imported through customs is not that cheap or easy anymore. Good luck Paul....."Porky"

TV and FM Broadcast signals use a wider bandwidth known as WFM (Wide FM) the other transmissions that you hear like those of the police and fire department they use NFM (Narrow FM). NFM is common on all scanners but WFM is found only on the Top-of-the- Line scanners aka PRO-2004/5/6 and the BC9000XLT

John, just because I am not a ham radio operator doesn't mean I am limited to just scanners. I have designed and built several commercial two-way radio systems. I have never bothered to get my ham licence since too many of the licenced ham operators I have met over the years are stuck on themselves. Now before thiat statement stirs the pot ... I am not saying all ham operators are like that, Just more than I care to deal with.

I just happen to enjoy scanners and I think I can contribute to others in the scanning hobby. As I seem to recall, I posted ON-TOPIC just this morning RE: LAPD Freqs.

Haven't seen much from you on-topic lately.

Mike

Dewey:

The PRO-90, manufactured by Uniden, is a much better radio than the PRO-91, (GRE manufactured?). I've had both, and the sensitivity, selectivity, image rejection, dynamic range, audio, etc., all appear to be much better with the PRO-90. It's easier to program, in my opinion.

That's why I use my PRO-2006 to listen to them and FM broadcast.
Using the handheld to pick up TV audio is only in the direst
circumstances.

I can also pick up *images* of a lot of TV audio channels between
30-50 MHz and up around 478 MHz. Although distorted because of the
explanation above, in case of emergency, they could be used if access
to a base scanner was impossible.

Message-ID: <6sv0qp$pr7$1@news4.wt.net>
Source record: 144899

Display: Pro-91 has a larger display. Also the Pro-91 displays the channel number of the control frequency and the channel number that a certain talkgroup uses for its transmission. This is lacking on the Pro-91.

Audio: The sound quality of the Pro-90 is better. The Pro-91 has a "hiss" that is annoying. Evidently there is an audio mod for the Pro-91 that is supposed to fix this but I haven't been able to find out too much about it.

Performance: Pro-90 and Pro-91 performance is very similar. At my home the Pro-90 is more affected by interference from strong pager signals than my Pro-91 is.

Batteries: Pro-90 can only use rechargeable batteries, so if they die, then you must wait to recharge them or have an extra battery pack and hope it is charged up. Pro-91 can use regular batteries or NiCd rechargeable batteries. I use high capacity NiCds that I took out of my Pro-26. They are over three years old and still last all day long.

AC power: Pro-90 comes w/ an AC adapter/charger. You have to spend another $7.99 for the AC adapter/charger for the Pro-91.

DC power: Pro-90 cigarette lighter adapter doesn't require a transformer so it usually sells for less than the Pro-91 adapter which needs a transformer.

Programming: Pro-90 can be programmed directly. Pro-91 must be put into the "programming mode." This means there are fewer steps involved in the Pro-90 programming process, but the Pro-91 programming mode makes it harder to accidently erase stored frequencies.

Duplicate entry: The Pro-90 informs you of duplicate entries. The Pro-91 informs you only when programming a trunked system.

Both models are manufactured by Uniden. The Pro-90 is a copy of a Uniden Bearcat model. The Pro-91 is custom manufactured by Uniden to RadioShack's specifications. This means that the RadioShack model follows many of the design characteristics of earlier generations of RadioShack scanners.

BTW: RadioShack has mentioned that it will make and EDACS capable scanner when the technology to price ratio allows.

How stupid to send a message to one person on a public newsgroup in which there is hiundreds of people. Mr. Mackey you should learn how to know the difference between a e-mail to one person and a posting on a pubklic newsgroup. Sometimes you seem like a sick man and other times juist stupid. Merry

I had also ordered the CD from Grove. They explained that there were some
problems, and once they were corrected, they would release the CD around
the middle of September.

5120. Once Again - Mackey's Despicable Posting History

Newsgroup: rec.radio.scanner
Date: 1998-09-06 00:00:00 UTC
From: "Mr. WireHead" <wirehead@pacbell.net>
Message-ID: <35F316D0.5D073711@pacbell.net>
Source record: 144906

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX.

Yep! I ordered mine in April!
They keep delaying the date when it'll be shipped. Fire off an e-mail to bgrove@grove.net and ask him. You'll get an excuse like I did on why an advertised product in their magazine and WEB site since April isn't ready yet. They even put in their "Whats New" column of their magazine that it was "now shipping" in the June or July issue.

5124. Re: FRS radio mod question

Newsgroup: rec.radio.scanner
Date: 1998-09-06 00:00:00 UTC
From: Brian <brian_usenet@cizone.com>
Message-ID: <UzHI1.93$T2.3388831@news.en.com>
Source record: 144910

Most of the FRS radios are controlled by a CPU and are virtually impossible to modify for that purpose. Manufacturers of FRS units do an excellent job making the radios difficult to modify to avoid abuse of the FRS frequencies.

If you're interested in receiving business or police frequencies, buying a portable scanner is best. If you need to transmit on these frequencies (and I assume you hold a license to do so), you should look into buying one of the many radios specifically designed for this purpose. Transmitting without a license on business/police frequencies will get you in some serious trouble very quickly.

> writing to my state "politicions"

They're tremendously conservative in their police policies down there. Number one, they depend on the tourist trade. They have no real industry other than tourism. So they're looking for any way to avoid any bad publicity.

They got some serious problems down there with crime. My brother is stationed down in Southern FL and he tells me about this latest antic: They got some people waiting for traffic on the interstate (Every day: traffic standstill.) And they wait for it to get backed up, then they just make they're way down the interstate on foot with a gun and just rob each car along the way.

I imagine they're just banging their revolver against each grid-locked driver's window and holding out a burlap bag.

"How often does that happen?" I asked my brother.
"Well,...how often do you think a traffic jam happens down here?" he said.

I'll bet they're enacting laws right and left. It's probably illegal to brandish a TOOTHBRUSH in Florida!

Hey, lawmakers know that one of the most formidable lobbying groups is AARP. Where the hell do ya think they live? They got the time, and you know they're not gonna sit by and ignore what's going on in their own backyard. Can ya see some Florida senior citizen pinning some assemblyman with his walker against the wall of the capitol. "Now looky here young fella, I had my social security check boosted by some young punk with a *toothbrush*. Are ya gonna do something about it or am I gonna hafta call in the AARP?"

A buddy of mine went down to FL for bike week a couple of years ago. He and another rider trailered their hogs down to Daytona. He unloaded the bikes and they took off. A couple of blocks down, a senior citizen turned right in front of them on a 55mph freeway. He pulled out there and froze. My buddy is still walking around with pins in his legs. Turns out that there's some extremely protective insurance regulations regarding liability down there. Bad drivers were able to squeeze some pretty good liability

protections through the FL assembly. Who do you think that group was?

Jack would know about this. What's your take on this?

Hello!

Do you know the best frequencies to monitor during the Power of Houston event? Its a week long show which will have many lasers and fireworks displays, and music too!

The set up crews, and the guys operating the laser and lights would be great to monitor. HPD is too easy.

If you know any of these, please drop me a note. This is my sisters system, so I might miss your reply if you dont mail it to this account.\
Thanks a lot!

Mark

There will be some dealers shortly. Edco no longer sells AOR products in
the US. A sticky situation (I hear) with the FCC. AORJA will or has opened
its own dist. site in CA. You should start seeing the scanners soon.
Universal Radio and Hamstation should have them by Mid Semptember.

"Swissair Flight 1113/8: Swissair
111 heavy (wide-bodied aircraft) is
declaring Pan Pan Pan (an urgent
message but not a distress call). We
have smoke in the cockpit, request
deviate immediate right turn to a
convenient place. I guess Boston.
CONTROLLER: Would you prefer to
go into Halifax?
SWR111: Affirmative for Swissair
111 ... Prefer Halifax from our
position. (According to the CTSB,
Swissair Flight 111 was 70 nautical
miles from Halifax and 300 nautical
miles from Boston at this juncture.
Aircraft starts a descent from 33,000
feet.)
CONTROLLER: Okay. Active
runway at Halifax is zero-six. Should I
start you a vector (directional
instructions) for six?
SWR111: Yes, vector for six will be
fine, Swissair 111 heavy.
CONTROLLER: Turn left
heading zero-three-zero.
CONTROLLER: You've
got 30 miles to fly to the threshold
(start of
runway).
SWR111: We need more than 30
miles...
CONTROLLER: Turn left ... lose
some altitude...
SWR111: Roger, we are turning left
...
SWR11: We must dump some fuel.
We may do that in this area during
descent.
CONTROLLER: Okay.
SWR111: Okay, we are able to turn
left or right turn toward the south to
dump.
CONTROLLER: Roger, turn left
heading of 200 degrees and advise me

when you are ready to dump ...
SWR111: We are declaring an emergency at time zero-one-two-four (01:24 a.m. Greenwich Mean Time, 9:24 EDT) We are starting vent (dumping fuel) now. We have to land immediately.
CONTROLLER: Swissair 111, you are cleared to commence your fuel dump on that track and advise me when the dump is completed.
CONTROLLER: Swissair 111, you are cleared to start fuel dump.

(There were no further communications from the Swissair Flight 111, the CTSB says. About six minutes later, the aircraft struck the water.)

COCKPIT VOICE RECORDER

Group Chairman's Factual Report

SUMMARY

A Fairchild model A-I OOA cockpit
voice recorder (CVR), s/n 54227, was brought to
the audio laboratory of the National
Transportation Safety Board on May 26, 1996. The
Cockpit Voice Recorder committee
convened on May 27, 1996. A transcript was
prepared of the entire 31:19 minute
recording.

DETAILS OF INVESTIGATION

The exterior of the CVR showed
evidence of major structural damage. The outer
case
was compressed and wrinkled along the
longitudinal axis. A hole was punched through
the top of the outer casing and
extended through the structural portion of the
memory
module. The tape and its reel were
slightly dented. A heavy coating of soot covered
the
front portion of the outer casing.
The interior of the recorder and the tape
sustained
only minor impact and no heat damage.
No underwater locator beacon (ULB) was
attached. All four bolts for the ULB
mounting plate had been sheared.

The recording consisted of four
channels of audio information. One channel
contained
the cockpit area microphone audio
information. Two other channels contained the
Captain and First Officer, audio
panel information. The fourth channel contained
interphone and public address
information Timing on the tape was established
using the

known time of several air traffic
control transmission recorded on a cassette tape
provided by the FM.

The recording started at 13:40:29 EDT
and continued until sometime after 14:13:11
EDT, the last verifiable time on the
CVR recording. The recording was interrupted
twice, once for one minute and twelve
seconds and a second time for an unknown
time period. When the recording
started, the pilots were starting engines during
the
push-back procedure. The recording
continued as the crew taxied, performed the
takeoff, and initial climb portion of
the trip. The crew experienced an problem of
unknown origin, declared an emergency
and attempted to return to the nearest airport.
The final segment of the recording
ended at an unknown time.

and cellular phones which should be
in the off position and stowed. now in preparation

for takeoff, please fasten your
seatbeit, return your seatback and tray tables to
the full
upright and locked position. your
carry-on luggage must be stowed in the overhead
compartments or underneath the seat
in front of you. on behalf of all ValuJet
employees, we'd like to thank you for
selecting us today. we hope you enjoy your
flight.

13:40:41 CAM-2 {Sound of cough}

13:40:51 CAM [sound of several
clicks]

13:41:17 CAM-1 below the line.

13:41:18 CAM-2 cleared to start?

13:41:19 CAM-1 received.

13:41:20 CAM-2 shoulder haness?

13:41:20 CAM-1 on.

13:41:21 CAM-2 parking brakes.

damper?

13:45:57 CAM-1 yaw dampers on,
bottoms are checked.

13:45:59 CAM-2 tops are checked,
passenger briefing done ** to the line.

13:46:03 CAM-1 OK, um, let's see
where do we go? three twenty two off Dolphin. it's

a vector to Dolphin.... and I'll set
three twenty two.

13:46:26 CAM-1 after WINCO it was
where?\

13:46:27 CAM-2 [sound of coughing]

13:46:30 CAM-2 WINCO Lakeland
Tallahassee. we gotta LaGrange six.

13:46:34 CAM-1 OK LaGrange OK Atlanta
itself had decent weather. I'm sure it's
(already) changed.... OK, five grand
gets blocked.

13:46:49 CAM-2 yep, three three one
forty.

13:46:51 CAM-1 the departure is?

13:46:52 CAM-2 is uh, nineteen forty
five.

13:46:55 CAM-1 OK...it's my takeoff,
it's my abort, flaps are five, V one min is one
thirty six. runway heading to five.

if we lose on takeoff. depending which runway we
go on, we'll uh, do a visual back
down the runway.

13:47:09 CAM-2 OK, if we go off
fou*uh, twelve then I think it's four hundred
feet.

13:47:12 CAM-1 right, to come back,
OK***

13:47:13 CAM-2 four hundred feet.

13:47:14 CAM-1 alright.

13:47:16 CAM-1 uh, when we're about
number three tor takeoff, we'll start number
two.

13:47:19 CAM-2 *

13:47:20 CAM-1 questions... no
question?

13:47:23 CAM-2 no questions.

13:47:58 CAM-1 all these airlines ya
never see normally **BizJet. \

13:48:01 CAM-? yeah.

13:48:04 CAM-1 is that a old Connie
back there? behind those but/dings?

13:48:07 CAM-2 aah, actually it's one
of those L-1011s.

13:48:11 CAM-1 just behind this dirt
pile here.

13:48:12 CAM-2 OK, yeah. ******

13:48:18 CAM-1 doesn't even have
paint on it. twin tails right there. about two
o'clock.

13:48:30 CAM-1 hold short of Zulu,
see it right there, off to the right?

13:48:33 CAM-2 aah, I see a seven
forty seven there.

13:48:36 CAM-1 He's real close to us,
right behind us.

13:48:38 CAM-2 ***

13:48:39 CAM-1 the antenna's off to
our right here by that building...it's kinda
camouflaged.

13:48:47 CAM-2 oh this, this twin
tailed thing here.

13:48:47 CAM-1 yeah.

13:48:48 CAM-2 oh, that's a uh,
that's uh...

13:48:50 CAM-1 Connie?

13:48:51 CAM-2 a one, Connis one
twenty one.

13:48:52 CAM-1 yeah.

13:48:53 CAM-2 son-of-a-gun. ***

13:49:44 CAM-1 *****

frequency similar to generator increasing in RPM]

13:57:37 CAM-2 light's out.

13:57:39 CAM [beep sound similar to
momentary power interruption to CVR]

13:57:41 CAM-1 sorry about that. I
got carried away.

13:57:50 CAM-1 below the lines for
re-start.

13:57:52 CAM-2 electrical panel?

13:57:53 CAM-1 is set.

13:57:54 CAM-2 APU air.

13:57:55 CAM-1 is off.

13:57:56 CAM-2 ignition?

13:57:57 CAM-1 is off.

13:57:57 CAM-2 ice protection number
two engine?

13:57:59 CAM-1 is off.

13:58:00 CAM-2 air conditioning
supply switches?

13:58:01 CAM-1 auto.

13:58:02 CAM-2 air conditoning auto
shut off

13:58:03 CAM-1 armed.

13:58:04 CAM-2 re-start checklist
complete.

13:58:26 CAM-2 [sound of coughing]

13:59:02 CAM-1 why don't you shut
down the APU.

13:59:03 CAM-2 **

13:59:20 CAM-1 ***takeoff **left
side. if we have to go back, we'll back it up with

the ILS. if we have to abort, you'll
tell the tower we're aborting.

13:59:26 CAM-2 OK.

13:59:27 CAM-1 altimeters?

13:59:31 CAM-2 [sound of cough]

13:59:40 CAM-1 once we get past WINC,
I'll probably have to set Tallahassee on your
side.

13:59:50 CAM-2 must be a big
conference ***lurch***

13:59:55 CAM 1 yeah.

14:00:15 CAM 1 we're next up.

14:00:17 CAM 2 yeah.

14:00:28 CAM 2 ****

14:00:29 CAM-1 yeah.

14:00:38 CAM-2 that's gotta be
frustrating for those, American guys, have to wait
for
the company to give them their

takeoff data.

14:00:51 CAM-1 I'd kinda like to have
that problem.

14:00:52 CAM-1 [sound of chuckle]

14:01:43 CAM-2 [sound of cough]

14:02:27 CAM-1 position and hold
below the line.

14:02:30 PA-2 ladies and gentlemen,
we've been cleared to the runway for departure.
flight attendants please be seated.

14:02:42 CAM-2 anti-skid coming on?

14:02:43 CAM-1 yep.

14:02:46 CAM [sound similar to
cockpit door being closed]

14:02:47 CAM-2 cockpit door is
locked, ignition on, APU, is off, flight attendant
signal
is given, anti-skid is, armed, and
TA, transponder is TA RA, pneumatic crossfeeds are

closed

14:02:58 CAM-1 OK.

14:02:58 CAM-2 .... annunciator panel
is checked, takeoff briefing is complete. flood
and logo lights.

14:03:01 CAM-1 OK.

14:03:02 CAM-2 ****

14:03:31 CAM 1 **lights are on.

14:03:34 CAM [sound similar to
engines increasing in RPM]

14:03:35 CAM-1 bleeds are closed.

14:04:44 CAM-2 slats retract.

14:04:46 CAM [Sound of click]

14:04:50 CAM [sound simliar to
stabilizer-in-motion indicator]

14:05:05 CAM-2 following the Boeing
straight ahead of us in a turn.

14:05:07 CAM-1 OK.

14:05:18 PA-3 and, ladies and
gentlemen, captain Kubeck will turn off the fasten
seat
belt sign just as soon she feels it's
safe for you to get up and move about the cabin.
until that time, please remain
comfortably seated) with your seat belts securely
fastened. we also suggest for your
safety that seatbeits be fastened even after the
sign
has been turned off. shortly we will
begin our in flight service. we are pleased to
offer
you a variety of soft drinks, coffee,
and juices. cocktails are available for three
dollars.
beer and wine are available for two

dollars. as always, correct change is greatly,
greatly
appreciated for a complete listing of
our complimentary beverages, they may be found
on page five of our Good Times
magazine. for now we just ask that you sit back
and
relax and enjoy your flight to
Atlanta, Georgia.

14:05:49 CAM-1 three six zero climb
power, climb check.

14:05:56 CAM-2 power's set.

14:06:29 CAM-2 gears up and checked,
flaps up, lights out, spoilers, is disarmed, the
ignition is off, fuel pumps are set,
air conditioning shutoff is override, hydraulic
pumps
off and low, flood and logo lights at
ten, and altimeters at eighteen.

14:06:40 CAM-1 thank you.

14:06:42 CAM [sound similar to
stabilizer-in-motion indicator]

14:06:55 CAM-1 three three zero

14:07:18 CAM-1 six for seven.

14:07:18 CAM-2 six for seven.

14:07:22 CAM-1 [tone similar to
altitude alert signal]

14:07:33 CAM-1 ****clear left

14:07:41 CAM-2 [sound of cough]

14:07:42 CAM-1 ***lets turn on the
radar***

14:08:00 CAM-2 got something out
there about eighty miles out.

14:08:02 CAM-1 OK.

14:08:03 CAM-2 that must be that
thunderstorm.

14:08:08 CAM-1 there's a break here
like ***

14:08:28 CAM-1 rd hate to be in this thing at a hundred and eight thousand and in through this weather.

14:08:32 CAM-2 yeah.

5136. Additional ValuJet 592 Comms

Newsgroup: rec.radio.scanner
Date: 1998-09-06 00:00:00 UTC
From: Ralph Stallsworth <r.stallsworth@sylvania.sev.org>
Message-ID: <35F2D050.1F0C0C2A@sylvania.sev.org>
Source record: 144922

ValuJet Flight 592 lasted 10 minutes from takeoff
to nose dive.

It started typically, a little late.
The only unusual thing the passengers might have
noticed was that the flight attendant
who was making announcements referred to the
captain as ``she.''

That was pilot Candalyn Kubeck, a day
past her 35th birthday. She had been captivated
by flight as a teenager when she
attended an air show at Oshkosh, Wis.

She had worked as an air traffic
controller, a flight instructor, a commuter pilot,
and as
a flight officer with Eastern
Airlines for two years. She joined ValuJet in
October 1993,
one of only a few female captains on
commercial jets.

Her reactions under pressure had been
tested in September 1995, when smoke filled the
cockpit during a departure from
Dallas-Fort Worth. She brought that plane back in
safely.

Next to Kubeck sat co-pilot Richard
Hazen, 52. He had told his wife, Catherine, that
he
liked Kubeck. He liked everyone, his
wife said.

Routine checklist

Out on the taxiway, they run through
the checklist. Cleared to runway Nine Left at
1:44 p.m., they wait 16 more minutes
behind other planes.

It is Kubeck's takeoff. Hazen handles
the microphone.

``Ladies and gentlemen, we've been
cleared to the runway for departure,'' he

announces
at 2:02 p.m. ``Flight attendants
please be seated.''

The jet accelerates on runway Nine
Left. The nose rises. It speeds eastward toward
Biscayne Bay.

Kubeck: Gear up.

In about five minutes, everybody --
pilot, copilot, flight attendants, passengers, 110

people -- all will begin dying. Five
minutes later, all will be dead.

Right now, though, nobody knows
anything is wrong. The jetliner climbs.

In the cargo hold, something slides.

A voice from the darkness

In the near-darkness of Miami
departure control, Jesse Fisher, 36, takes over
ValuJet's
direction.

He addresses it as ``Critter 592,''
the nickname inspired by the cartoon image of a
grinning airplane on ValuJet
fuselages.

``Afternoon departure,'' Hazen says.
``Critter 592 out of 500, going to 5,000.

As the jet flies just above North
Bayshore Drive, Fisher sends it the other way:
first a
northward turn, then another to the
northwest.

Beneath the feet of passengers in the
first 10 rows of seats, something awful is
happening.

Boxes of oxygen generators bang
around, igniting one or more. Oxygen spews, fire
intensifies.

Just above, nobody knows anything is
wrong. Not yet.

As the plane makes a wide arc,
passengers can recognize Joe Robbie Stadium,

Opa-locka Airport, the Big Bend in
the Palmetto Expressway, I-75 and the Florida
Turnpike.

They are seeing these things for the
last time.

Kubeck tells Hazen to turn on the
radar.

Hazen: Got something out there, about
80 miles out. That must be that thunderstorm.

Now, they hear a strange noise.

Exactly what the noise is, no one
knows for certain. Best guess: the fire has been
burning virtually from the moment the
DC-9's nose tilted up on takeoff, and the heat
has expanded the air in the cargo
tires until they begin blowing out. If not that,
then
likely the sound of a bursting
bulkhead, between the cargo hold and the passenger

cabin.

Kubeck: What was that?

Hazen: I don't know.

The captain wonders if a fuse is
failing. Earlier, the trip from Atlanta to Miami
was
delayed by electrical problems.

Kubeck: About to lose a buss? We got
some electrical problem.

Hazen: Yeah. That battery charger's
kicking in. Oooh, we gotta --

Kubeck: We're losing everything.

Time: 20 seconds past 2:10 p.m.

ValuJet 592, still flying
northwestward, is leaving Fisher's territory. He
tries to hand it
off to Miami Air Route Traffic
Control Center, in a low building northwest of the

airport. Fisher gives the crew a new
radio frequency:

``Critter 592, contact Miami Center
on 130-245. So long.''

But they don't reply.

``Fire! Fire, fire, fire!'' come
women's shrieks from the cabin.

Kubeck to Hazen: We need, we need to
go back to Miami.

``We're on fire, we're on fire!'' a
man cries.

Then an alarm sounds, one of several
to be heard in the next minute.

Kubeck: To Miami.

Bedlam aloft

Fisher, unaware of the trouble, again
asks Flight 592 to contact Miami Center.

Hazen: Uh, 592 needs an immediate
return to Miami.

First, Fisher gives him a heading and
altitude.

``Critter 592, uh, roger, turn left
heading 270. Descend and maintain 7,000.''

Fisher: What kind of problem are you
having?

Kubeck to Hazen: Fire.

Hazen to Fisher: Smoke in the
cockpit, smoke in the cabin.

Fisher has worked emergencies before.
A private plane ran out of gas. Two Boeing
737s returned to the airport with
cabin air pressure problems.

Nothing like this. This is
horrifying. Fisher cries out:

``I need a supervisor over here!''

A plea for vectors

Robert T. Paul, 38, supervising 13
controllers this afternoon, hurries over.

``Critter is returning to the
airport,'' Fisher tells him, briefing him on the
smoke.

Paul plugs in his headset at Fisher's
position, standing at Fisher's right shoulder. The

airliner is over the Everglades now,
25 miles northwest of Miami.

Fisher calls Miami tower control to
report Critter is returning. He calls the plane
and
instructs the crew to follow Dolphin
VOR, a navigation guide.

Hazen asks for radar vectors -- exact
directions.

Fisher tells him 140 degrees. Hazen
acknowledges, voice cracking.

On radar, Hazen sees 592 making the
turn. It's being made very slowly.

No formal declaration of emergency
has been made. Fisher doesn't need one. He
knows.

In the plane, the cockpit door opens.

Flight attendant: OK, we need oxygen,
we can't get oxygen back here . . .

The intercom chimes. More shouting
from the cabin.

Flight attendant: Completely on fire.

And then, inferno

The shouts are subsiding. Fire -- hot
enough to melt an aluminum seat frame -- has
conquered the passenger cabin.
Plastic objects -- ceiling liners, overhead
baggage
holders -- are burning, creating
lethal gases, including cyanide.

Hazen and Kubeck can still speak.

Hazen: Critter 592, we need the, ah,
closest airport available.

Opa-locka Airport is slightly closer
than Miami International. If the airplane could be

stopped and backed up to park, like a
bus, it might be able to land there a little
sooner.
But the DC-9 has to make a wide turn,
and on that path Miami International is just as
close.

Fisher tries to reassure Hazen:
Critter 592, they're going to be standing by for
you. You
can plan Runway One-Two when able.''

After the words ``You can plan,'' the
cockpit voice recorder fails. There is an
interruption of one minute and 12
seconds.

An alternate: Opa-locka

In the radar room, recording
equipment is still working. So are Hazen and
Kubeck,
asking again for directions.

Hazen: Need radar vectors.

It's a clear day. Fisher, a pilot
himself, figures Hazen and Kubeck must have
trouble
seeing in the cockpit. He gives the
radar vectors.

Fisher: Critter 592, turn left,
heading one-four-zero.

Hazen: One-four-zero.

There are no more words from Critter
592.

Fisher's boss, Robert Paul, suggests
telling Hazen where Opa-locka is.

Fisher: Critter 592, Opa-locka
Airport's about, ah, 12 o'clock at 15 miles.

Nobody answers. There are clicks on
the cockpit microphone buttons, apparently an
attempt to acknowledge as Fisher
gives Flight 592 instructions four more times.

Then the clicks stop too.

Fisher and Paul are standing in the
gloom, staring at the radar screen. The ValuJet
592

readout flashes XXX. It means radar
has lost sight of the plane, or it has moved so
fast
-- up or down -- that the radar could
not track it. Paul knows exactly what it means:

``The plane is down!''

`I saw an airplane crash'

Two small private airplanes are over
the Everglades. One is a Piper Arrow flown by
Daniel B. Meulhaupt, on a pleasure
flight from Opa-locka to Naples with a friend,
Richard Delisle. Delisle has a
camera; his photos will be the first taken of the
crash
scene.

The other plane is a Piper Cherokee,
whose pilot apparently is not known.

Arrow: ``I just saw an airplane crash
down here. Ah, six-eight Romeo. It's scary.

Air Control: Yes sir, we're working
on that right how. Thank you very much.

Cherokee: Miami Approach,
nine-two-zero-one Zulu, just minute, a few minutes
ago I
saw a crash about three, 300 radial
of Miami VOR.

The tower asks the Cherokee to
circle, trying to get a radar fix on the spot.

Air Control: Do you see any people
moving on the ground?

Arrow: Negative . . . That plane
broke up into a million pieces.

Since the loud popping sound, thought
to be the blowout of a tire in the cargo hold,
four minutes have passed.

And 110 souls.

He reacts to each post about Bill and of Bill`s material like it was posted
just to aggravate him. He claims I started this thread. And he is right. All
I had to say was that Bill Cheek could use a little help from his friends,
and Mackey went over the edge again. The REAL question is, why does he feel
he has to have a knee - jerk reaction to each and every post of this nature
? An examination of his actions reveal the underlying motives.... He
misses Bill worse than any of us do ! Bill has become his obsession, his
WHOLE LIFE. How is he going to garner any glory without him ? Without Bill
to bounce off of, he is nothing again. Bill OWNS him. He MUST feversishly
read the scanner news groups every day, 10 times a day, just to hear about
him. Bill fills his every waking moment..... Bill is a father figure to be
rebelled against, you see, as any male authority figure in his life must be
rebelled against. Daddy must pay for his sins ......
He is a fascinating psychological study. He will exhibit this
behaviour in any group he frequents on a regular basis. This means he has no
self - respect. He has no achievements to show, no knowledge or expertise,
and so he must belittle the achievments of others. He is, forever, "The guy
who fought with Bill Cheek". What tremendous status ! I am impressed. Aren`t
you ? He has completely misjudged the way adults will react to this bizarre
mental aberration of his. The rest of his profile is too gruesome to go

into.

Not to get off the subject, but perhaps some of you would enjoy reading "Journey into Darkness" By John Douglas..... Should be able to find a copy at the local library.....

What's wrong with ZERO tolerance for road rage no matter
who it is in the presence of? How come something that is
wrong is less wrong when there are no kids around?

Calling all Scanner Freqs (FREAKS) in the U.K.

There are hundreds of Frequencies out there, many have
not been published in books like UK Scanning Directory.
I am looking for some NEW Freqs In the South Wales area
i.e. Police, Fire, Ambulance etc. I am also looking for Police Codes
for the U.K. I have found loads of 10 codes on the NET but they are for
the U.S.A please can any one help me.

One last thing I have a Realistic 2042,2004 and FRG 8800 HF set can any
one tell
me if I can get hold of a some software which I can control my scanners via
the Computer I know of one which can control any Scanner, but it involes
electronic's i.e. build your own out of a kit form, this is not my cup of tea
Victor. I am looking for something which is easy to use and reasonable in
price, Is there any one who can help me or put me in the right direction.

KEEP SCANNING ALIVE!
It cause's no harm, it's a hobby that's all.
From The Scanning King

5156. Automate Making Your Frequency Files - From Bill Cheek

Newsgroup: rec.radio.scanner
Date: 1998-09-06 00:00:00 UTC
From: Zombie Wolf <zmbwf@somtel.com>
Message-ID: <6su47s$4ua$1@garnet.mint.net>
Source record: 144942

From: Bill Cheek <bcheek@san.rr.com>
Subject: Automate Making Your Frequency Files
Date: Thursday, June 04, 1998 3:04 AM

This is of wide interest even though specific equipment
is mentioned by way of examples

My previous post under the following subject....

AutoProgramming PRO-64/PRO-2041

....only grazed the subject of the automation of making
frequency files or databases. The intent of that post
was to offer some clues and tools for making the kind
of files that are required by the PRO-64 and PRO-2041
for their "AutoProgramming" feature. In a word, those
scanners require plain ASCII text files in the below format:

{Optional Channel Number} followed by one or more non-numeric
characters (called "delimiters") followed by the frequency
to be programmed in NNNN.NNNN format. Within limits of reason,
I suppose, anything else on the same line is allowable AFTER
the frequency so long as there is another delimiter character
after the frequency. Here are several examples of legit file
formats for the PRO-64 and PRO-2041:

```
1 2 3
=== === ===
1 462.6725 1,462.6725 1,857.1000,Police
2 158.9700 2,158.9700 2,158.9700,Police
3 26.9150 3, 26.9150 3, 26.9150,Freeband CB hangout
4 162.4000 4,162.4000 4,162.4000,NOAA Weather
5 162.5500 5,162.5500 5,162.5500,NOAA Weather
```

```
4
=== I suppose there could be a number of other
462.6725 permutations for additional examples of
158.9700 frequency lists or files that are acceptable
26.9150 to the PRO-64 and PRO-2041, but these four
162.4000 should get the idea across, anyway.
162.5500
```

Now, of the four formats or styles, which do
YOU see as the most utilitarian and useful?

I should think you'd pick Example #3 as I do. Why? Because
it contains the most information, of course. But it might not
have occurred to you that the PRO-64 and PRO-2041 can accept

non-essential information *IF* it is properly formatted.

The significance of this is that every scannist keeps lists of frequencies. That's a given with the scanning hobby. But these lists vary as night and day with respect to HOW they are organized and formatted. Each hobbyist keeps his records a little different from the next guy.

Compounding matters, when hobbyists exchange and swap freq information, the first guy's style certainly isn't going to match the next guy's. Worse, the "word wrap" function of most text editors, e-mail programs, and Web Browsers can throw complete disarray into what little organization might be otherwise present.

Let's face it....there's a lot of work in preparing custom frequency files. That's a given. But as intimated in my last post, there are methodologies and procedures to reduce the workload considerably. Cathy elucidated one with Excel. There are others. But there are darned few ways to quickly make order out of chaotic lists of frequencies like found around mail lists, newsgroups, and web sites.

One way mentioned in my last post is Reid Drummond's APFTools, a slick utility that "reads" text files and automatically extracts frequencies along with any possible identifying data and puts them into an organized, comma-delimited text file, ready to be AutoProgrammed into the CE-232 Interface. It even adds channel numbers (if you want!)

But APFTools is good for a lot more than just the CE-232, as it turns out.....in this case, also for the PRO-64 and PRO-2041. And a lot more!!!! Here, let me show you.....lookee here:

Bess Eaton Donut 457.5375 467.7625 Rhode Island
Big Boy 30.8400 154.5700 UNKNOWN OH area
457.6000 467.8250 UNKNOWN OH area
Burger King 30.840 154.5700 UNKNOWN OH area
31.0000 170.3050 UNKNOWN GA area
457.5500 467.7750 Baltimore, MD area
457.5625 467.7875 Nationwide
457.5750 467.8000 UNKNOWN area
457.6000 467.8250 UNKNOWN area
460.8875 465.8875 Nationwide
461.5375 UNKNOWN UNKNOWN OH area

Imagine a list of several hundred frequencies organized like the above. You've got your work cut out for you, putting it into any semblance of order. But APFTOOLS can do it like greased lightning, with results shown below:

,23,457.5375,,,,Bess Eaton Donut, 467.7625, Rhode Island,
,24,467.7625,,,,Bess Eaton Donut, 457.5375, Rhode Island,

,25,30.8400,,,,Big Boy, 154.5700, UNKNOWN OH area,
,26,154.5700,,,,Big Boy,30.840 , UNKNOWN OH area,
,27,457.6000,,,,467.8250, UNKNOWN OH area,
,28,467.8250,,,,, , 457.600 , UNKNOWN OH area,
,29,30.8400,,,,Burger King, 154.5700, UNKNOWN OH area,
,30,154.5700,,,,Burger King,30.840 , UNKNOWN OH area,
,31,31.0000,,,,170.3050, UNKNOWN GA area,
,32,170.3050,,,,,31.000 , UNKNOWN GA area,
,33,457.5500,,,,467.7750, Baltimore, MD area,
,34,467.7750,,,,, 457.550 , Baltimore, MD area,
,35,457.5625,,,,467.7875, Nationwide,
,36,467.7875,,,,, 457.5625, Nationwide,
,37,457.5750,,,,467.8000, UNKNOWN area,
,38,467.8000,,,,, 457.575 , UNKNOWN area,
,39,457.6000,,,,467.8250, UNKNOWN area,
,40,467.8250,,,,, 457.600 , UNKNOWN area,
,41,460.8875,,,,465.8875, Nationwide,
,42,465.8875,,,,, 460.8875, Nationwide,
,43,461.5375,,,,UNKNOWN, UNKNOWN OH area,

Maybe the above doesn't "look" pretty, but it's perfect
for additional computer processing like Cathy described!
The results can take any of several directions, depending
on your tastes and preferences. If you want this list for
your PRO-2041 and PRO-64, just delete that first column of
commas and you're all set. If for the CE-232 Interface, then
it's good just as it sits.

But if you just want a good looking list? That's fine, too.
As Cathy suggested, drop the file into Excel or other spreadsheet
or even most any database manager, and output it to a tab
delimited file that would look something like this:

23 457.5375 Bess Eaton Donut 467.7625 Rhode Island
24 467.7625 Bess Eaton Donut 457.5375 Rhode Island
25 30.8400 Big Boy 154.5700 UNKNOWN OH area
26 154.5700 Big Boy 30.840 UNKNOWN OH area
.....etc.....

So you don't have to have a PRO-64, PRO-2041, or a CE-232
to take advantage of automation in the preparation of your
frequency lists. Now here is the coup d'etat:

I can copy this *entire message* into a text file (without
editing); run APFTools on it; and instantly have a clean,
well ordered frequency list without the needless text and
superfluous nonsense! (Just the freqs, channel numbers,
and descriptive information ONLY!)

As previously mentioned, APFTools is available from my
FTP site as follows:

ftp://204.210.11.204/ce232/Programs/apf40.exe

or from my Web site at:

http://204.210.11.204/bcheek/index.htm part way down the page.

ScanCat's MAGIC (a commercial program) does much the same
thing as APFTools (shareware, $5 gratuity requested).

If you want quick, accurate, and semi-automated ways to make
your frequency lists (for whatever need and purpose), the
tools, methods, and procedures are available at no or low cost.

5157. Auto Programming Your PRO-64/PRO-2041 - From Bill Cheek

Newsgroup: rec.radio.scanner
Date: 1998-09-06 00:00:00 UTC
From: Zombie Wolf <zmbwf@somtel.com>
Message-ID: <6su4ek$4v4$1@garnet.mint.net>
Source record: 144943

From: Bill Cheek <bcheek@san.rr.com>
Subject: AutoProgramming Your PRO-64/PRO-2041
Date: Thursday, June 04, 1998 3:01 AM

The following post is made out of a need to use
automation to create text files that can be used
to AutoProgram the PRO-64/PRO-2041 scanners.
Who wants to make 'em manually? <Gack>

===

I just found a neat sideline to programming
the PRO-64 and PRO-2041 scanners. This technique
is great for those who have a CE-232 Scanner/
COmputer Interface, which used *.APF file formats
supported by PerCon, ScanCat (Magic), and the
neat file creator utility, APFTools....but other
hobbyists can use it, too!

Seems an APF file goes straight into the PRO-2041
and PRO-64 with almost no altering at all. Here is
an example of an APF file that's used by the CE-232:

```
,281,161.6700,nfm,D,L,NEWS,RADI,SDG,KCBQ-AM; F-1; Remotes,,,
,281,161.6700,nfm,D, ,NEWS,RADI,SDG,KFMB-AM/FM,,,
,281,161.6700,nfm,D, ,NEWS,RADI,SDG,KFSD;,,,
,281,161.6700,nfm,D, ,NEWS,RADI,SDG,KMLO-AM; Remotes,,,
,282,161.6400,nfm,D,L,NEWS,RADI,SDG,KFMB-AM/FM - Remotes,,,
,283,450.2875,nfm,D, ,NEWS,RADI,SDG,KFMB-AM/FM; F-1/2; News,,,
,284,450.7625,nfm,D, ,NEWS,RADI,SDG,KFMB-AM/FM; KPH-592,,,
,285,450.2625,nfm,D, ,NEWS,RADI,SDG,KFMB-AM/FM; KPJ-931,,,
,286, 26.1100, am,D, ,NEWS,RADI,SDG,KLZZ-AM/FM;,,,
,287, 35.9600,nfm,D,L,NEWS,RADI,SDG,KLZZ-AM/FM; Backup,,,
,288,161.7600,nfm,D, ,NEWS,RADI,SDG,KCBQ-AM; F-3; Backup,,,
,288,161.7600,nfm,D, ,NEWS,RADI,SDG,KJFM Radio,,,
,288,161.7600,nfm,D, ,NEWS,RADI,SDG,KLZZ-AM/FM; Backup,,,
```

Format:

```
Filter,Channel Number,Frequency,Mode,Delay,LockOut,optional......
```

The CE-232 requires everything to the left of the 6th
comma. From the 7th comma on to the right are optional,
but obviously helpful in the identification and look up
of signals. It would be nice to use the same file to
program the PRO-64 and PRO-2041 scanners.....

AND YOU CAN!

Open your APF file and use a decent text editor or word processor to remove the first column of commas and anything that might be to the left of it, so that each line begins with the CHANNEL number. THAT'S IT! Oh, you can rename the file to *.FRQ and use Bob Miller's Wload64.exe program or Ken Plotkin's LOAD or LOAD64 programs, or Cathy De Viney's Excel sheet to finish the job.

It doesn't matter if you have a CE-232 Interface, because Reid Drummond's APFTools program creates APF files auto-magically from disorganized, chaotic text files. Use APFTools as an interim tool, first to create the APF file, then a text editor to remove that first column of commas and anything that might be to the left of it....and VOILE!

The resultant file goes into the PRO-2041 and PRO-64 just slicker than greased snake snot on oiled ice! APFTools is freely available from my FTP site as follows:

ftp://204.210.11.204/ce232/Programs/apf40.exe

or from my Web site at:

http://204.210.11.204/bcheek/index.htm part way down the page.

Thanks for that URL; lots of good info there!

BTW, after uncovering my old BC 100XL and realizing I've left the batts in it for too long I figured it was time to look for something new.

This month at the RS I see the PRO 2050 is on sale for $200 (U$). Purchase it with a RS credit card (which I'm told you can apply for the same day) and get 20 percent off. That's the PRO 2050 for $180! Good deal, eh?

I'd say that's an impulse buy?

I am looking for information on how the LAPD 506/507MHz frequencies work as far as the input frequencies are concerned. Are they 5 MHz higher, as most UHF 460MHz freq's are, or do they vary?

Thanks for any info.

It depends on your "need" for radio communications. If it's for a business use, you could get a licenes in the "business radio service" which has allocations in the 30 to 50 Mhz band. If it's just for your personal use, consider getting a ham license. The 10 meter band is just below 30 Mhz and has repeater frequencies as does the six meter band that is just above 50 Mhz. Other options would be GMRS at 460 Mhz, or the new Family Radio Service, also at 460 Mhz, but with very limited range.

I picked one up at a local Service Merchandise store in Troy, Michigan. It looks great, sounds good, feels a little light, and the volume and squelch controls don't have that nice firm feel to them, they actually feel a little loose. The front panel is laid out nice, easy to read, and has a nice tactile feed back, although programming is a little different than we're used to with RS & Uniden scanners. It runs on 4 "AA" batteries. Sony supplies software that not only allows you to upload/download frequencies, but you can also control the scanner with it. The PerCon Spectrum FCC frequency database is also included on the CD-ROM... over three million records! I don't think there is a way to restore cellular. It seems to do a respectable job on all bands, and it also has a pre-programmed service search that works well.

>Okay, I know what the frequencies are for the Audio (and Video) for TV
>stations, but my two handhelds don't have that range. Is there a
>modification I can make to add those frequencies?

Try www.ramseyelectronics.com or www.grove-ent.com and see their selection off converters. You may be able to receive a few of the channels. The problem is, TV is scattered from 50 to 250 MHz, more or less, and that's just the VHF channels. The UHF channels cover another 500 MHz of spectrum. No diode clip is going to add all that.

The PRO-51 scanner (and maybe others) has a test mode which programs in frequencies not normally covered. I can get TV audio channels 5 and 6, but they're distorted. I'd be better off getting a cheap TV audio receiver on a multi-band radio.

The overwhelming majority of scanners cannot be modified for additional frequency ranges. In fact, I know of *no* scanner that ever had that modification. There were a few that already had those frequencies, but had them blocked out with a diode or resistor, but unless your scanner already covers those frequencies, you can't get them. One scanner did have a diode-add spot where you could get something like 77-88 MHz, but you lost 30-50 MHz.

5172. New station on shortwave!!!!! ALERT ALERT ALERT!!!!

NORTH Korea claimed yesterday that its recent launch of a rocket, which put Japan on high security alert, was a "singing satellite", not a weapon.

The claim sowed confusion in Seoul, Washington and Tokyo, which had accused Pyongyang of firing a ballistic missile over Japan.

The Korean Central News Agency, official mouthpiece of the world's most secretive regime, said: "Our scientists and technicians have succeeded in launching the first artificial satellite aboard a multi-stage rocket into orbit." The satellite is now transmitting the melody of the immortal revolutionary hymns Song of General Kim Il-sung and Song of Kim Jong-il and the morse code signal 'Juche Korea' on 27 megahertz."

Well, it's a *high* shortwave frequency.

Hmmm. Hrrrmmmmrrrrr. Has anyone heard this one?

I wonder who the target audience is supposed to be? Certainly not the North Korean people who are starving. . .

hehehe yup... now to make myself clear, I did ask if a scanner was modifiable, but I wanted to know cause of the wide range of "software programable" scanners that are available. I'd like to know what I'm buying....

But, the other side is... Cell calls maybe at one time were very interesting... but now.. plagued by "ok honey, I'm on the way home, do you need me to pick up milk?"

> 952.6875

The actual assignments are xxx.68125; PerCom apparently rounded to four decimal places. Your scanner assumed an interval of .0125 MHz and rounded the entry to the next standard step (i.e. .6625, .6750, .6875, etc). If this were a conventional narrow-FM voice transmission, an error of 6.25 kHz would probably produce a slightly distorted but listenable signal.

Unfortunately, in the U.S. this assignment is drawn from the Power pool for point-to-point microwave. The transmissions are probably digital control signals for a local electrical utility or a municipal traffic control system.

How would you know that it is "boring and depressing" You must have listened yourself. But now you can hop up on your soap box and proclaim that no one else should listen. Even if you were listening back when it was legal, wasn't it still " sneaky, sleazy, and the sport of losers without any life of their own. " ?
I don't mean to single you out, but I get tired of people posting "its illegal, don't do it" or "its so boring, why would you want to listen" When 99.9% of them have listened to cell or cordless.
If people want to listen, they can listen. if they get busted, they get busted. If you don't want to be heard, don't send it out over the air. Seems quite simple.

You should cut the film where the box is going to mount if possible.
If the film is metal than you will cause iterferenc and loss of signal
on your cell phone.

It's on the radio end.
The OPC-478 has a 1/8" stereo plug on it. The DJX10 requires a 3/32"
stereo plug.
The DB9 plugs into the PC.

How could that be John? You spend *all* your time filling this NG with non-sensical posts. That's *all* you do. What exactly are these "broader & deeper interests" you claim to harbor?

Why doesn't that self professed "broader & deeper interests in the radio hobby" show you as an active contributor to ham radio and repeater NG's ANYWHERE NEAR the amount of time and posts you spend on this NG?

What possible justification do you have to continue posting WACKEY MACKEY missives in the rec.radio.scanner NG? Look at the facts:

1. You don't profess to be learning about scanners by reading posts here. In fact: Your quote from above -

>True, I am a radio hobbyist & enthusiast and I don't limit myself
>to scanners as you do. I have much broader & deeper interests
>in the radio hobby than limiting myself to scanner listening as you do.

- clearly shows that you regard the scanner hobby beneath you. In my opinion, I feel that you hold scanner hobbyists in utter contempt; your *THOUSANDS* of off-topic and inflammatory posts on record for this NG certainly support this contention. Your contempt for scanner hobbyists on this NG is evidenced by examples such as constantly changing your screen name to worm around filters people set up to avoid having to read and download your posts. (Go ahead; start squawkin' and you know which repost comes next, don't you?)

So you're not here to read and learn about scanners.

2. You're not here to contribute about scanners. How long does a novice scanner hobbyist have to lurk and wade through your thousands of useless posts to see something even close to knicking the scanner topic? *I'm* that novice scanner hobbyist. I've been here a couple of years; and you've have racked up *THOUSANDS* of valueless posts while I've been watching.

So you're not here to contribute.

Hell John, everyone's free to post to an unmoderated NG; including you. But you're going to get questioned each and every time a post doesn't agree with another NG denizen's view. I don't have any mission in life to run you off. I question you for my own amusement.

But this is what I read out of your behavior and why I think you're here:

You had to work hard for your radio licenses. (Probably harder than most) It was appears to have been the hardest challenge of your life. And you succeeded. You got your license; you obviously regard that as your "crowning achievement". Unfortunately, I can imagine your anger when you found out that it didn't garner the respect and admiration of your licensed ham radio peers that you felt it deserved. I mean there you are, holding the same license as others in the ham radio hobby and they still treated you like an annoying piss ant.

That's why you're not posting in the ham radio NG's; your license there doesn't mean anything there. That's why you're over here. Trying to garner respect with your ham radio license in an area of radio (scanners) that doesn't require a license. And you're still not garnering any respect; even among those who never had an interest in obtaining a license to transmit. That must boil your blood, doesn't it?

You're subconsciously lashing out at everyone who doesn't adore you by virtue of your license alone. You need to realize that licenses and certifications don't do you any good if you behave like an annoying piss ant.

You've also got to realize that ham licenses don't generally instill "a sense of awe" in the general public outside the ham radio hobby. Much like scanner listening doesn't impress many people outside the scanner hobby. Those are things you do for *yourself*, not for respect.

You also appear to be firmly in the clutches of "instant gratification". That is, you expect "instant" admiration for one on-topic post. Yet nothing comes from that one post. No "attaboy John", or "that's really observant.", or even "that's mildly informative". All you get is the sound of chirping crickets. You get ignored. And your anger just festers away at a greater pace. And no amount of "screen name" changes is ever going to change that.

Be honest with yourself John: You crave respect and there's none for you to enjoy. You *can* get it; but not with your current methods. You don't do it with licenses, certifications, or even degrees. It's unfortunate, but that's the truth. You do it through actions and integrity. Immerse yourself in the topic and develop yourself through areas you haven't explored. Find out what you *don't* know about radio and work from there.

Your posts will be ignored for a long time. But you'll be laying a track record. Some people will never warm up to you. Too much damage has been done to win over everyone. But new people and people that believe a person can change will eventually see your sincerity and desire to further your skills in radio; and your current reputation will fade into the background.

That's how to garner the respect you crave; steady performance over time with liberal doses of integrity and truth.

But until then; it's business as usual,

You friggin' loon.

Calling all Scanner Freqs (FREAKS) in the U.K.

There are hundreds of Frequencies out there, many have
not been published in books like UK Scanning Directory.
I am looking for some NEW Freqs In the South Wales area
i.e. Police, Fire, Ambulance etc. I am also looking for Police Codes
for the U.K. I have found loads of 10 codes on the NET but they are for
the U.S.A please can any one help me.

One last thing I have a Realistic 2042,2004 and FRG 8800 HF set can any
one tell
me if I can get hold of a some software which I can control my scanners via
the Computer I know of one which can control any Scanner, but it involes
electronic's i.e. build your own out of a kit form, this is not my cup of tea
Victor. I am looking for something which is easy to use and reasonable in
price, Is there any one who can help me or put me in the right direction.

KEEP SCANNING ALIVE!
It cause's no harm, it's a hobby that's all.
From The Scanning King

Bill would have surely voiced an objection to any infringements on his copyrights; as *any* writer would. And yet no objections have materialized.

That means one of two things:

1. It *was* Bill posting SCANNER RELATED material.

or

2. Bill's SCANNER RELATED material was posted with his consent.

So what are you whining about? A bogus E-mail address? A bogus identity?

Why are you singling him out John-RadioFan-compania-rcl1-fred-Digital Persona-Mackey?

Why not harass everyone with a bogus E-mail address. Why just Bill's SCANNER RELATED posts?

Obsession? Stalking? Sociopathic tendencies? Something sexual going on there? Tell me: WHAT IS IT?!?!?

You friggin' loon.

Source record: 145018

Dewey:

I have the PRO-90 and I like it very much.

Good comments:

1. Display light stays on for a full 5 sec. when keypay button is pushed.
2. Numbers on keypad are round and oversized.
3. Speaker appears to sound better than my Pro-60.
4. Trunking features work as advertised.
5. Has built-in service frequencies for scanning police,fire/emerg., air, marine, and NOAA weather.
6. 300 frequencies (30 per bank).
7. Display is more visible (at different angles) than my Pro-60.
8. Can limit search, lockout frequencies of your choice, and ignore data channels.

Bad comments:
1. Can only trunktrack on one bank at a time.
2. Can not trunktrack and conventionally scan concurrently.
3. Squelch know turns counter clockwise (opposite to my Pro-60) and the white marker on the squelch knob is not where it should be per manual.

Hope this helps.

Joe

5214. And Again - Mackey's Despicable Posting History

Newsgroup: rec.radio.scanner
Date: 1998-09-07 00:00:00 UTC
From: "Mr. WireHead" <wirehead@pacbell.net>
Message-ID: <35F46125.4680AE8F@pacbell.net>
Source record: 144729

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX.
We do not believe this to be a coincidence ....

5215. MultiMode 1.0.0 Decoding Software Released for Macintosh

Newsgroup: rec.radio.scanner
Date: 1998-09-07 00:00:00 UTC
From: cps@access.digex.net
Message-ID: <cps-ya02408000R0709981858490001@newsreader.digex.net>
Source record: 144730
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.digital.misc,rec.radio.amateur.misc

The latest version of MultiMode, Version 1.0.0, is now available for MacOS computer systems.

The URL is http://www.access.digex.net/~cps/sss14.html

MultiMode is an application which allows your Macintosh to decode several different modes of non-voice communication often heard on shortwave radio.

MultiMode allows you to decode and display morse code, RTTY, fax, and many other modes on your Mac, without any extra hardware!

In the past, dedicated hardware, often costing hundreds or thousands of dollars, was necessary to demodulate and decode this transmissions. Today, you can use the
processing power of your Macintosh to decode and display these modes, without any hardware.

MultiMode decodes the following signals:

Morse Code (CW)
RTTY (Baudot)
ASCII
SITOR-A
SITOR-B / FEC / NAVTEX
FAX
ACARS
WWVB Time Decode
DTMF
Audio Spectrum Display to aid in properly tuning in stations

Message-ID: <35F46B21.138844C1@navix.net>
Source record: 144731
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Well, I suppose this could be a problem for many scanners. I suppose
the easiest way to avoid this is to get a scanner with programmable step
size. Like an AOR or a newer ICOM radio.

--Good luck
Matt

Source record: 144732

In my humble (lol) opinion, after having checked out the 1000, the better bet is the IC-PCR1000 by Icom. Although you will hear your share about the poor support for this product from Icom, the base software is more than adequate. ScanCat Software would be an even better option for extras. The price is right (around 500 bucks) and this should easily keep up with the new 1500 which was "just" FCC approved and will be in the country soon. Only the WinRadio 3100 could beat the Icom and that is 2 grand. So if your budget is slightly more modest, check out the ICOM.

Is there anyone from the Aerospace Defense Command reading this news group. The reason I ask is that if it is a satelite then norad, or who ever is incharge of tracking space vehicles should be able to confirm or deny North Korea's claims. Anyone out there.

I bought AOR parts from a distributor in England and they were just
great to work with. The parts were reasonable along with the shipping.

The company in VA is a rip off. They wanted my scanner for evaluation at
a charge of $30 plus parts and labor to repair it. Why pay them when
you can repair it yourself, if you know what it needs.

I needed the key pad buttons and they were very easy to replace.

Can anyone tell me what the most accurate and exhaustive database for the US is. I would require that it inform as to "what" the frequency represents. For example not just listing a load of frequencies that are licensed like the PerCon, but one that actually would say "Naperville Sheriff" or "Deerfield Public Works". I am sick and tired of just a shitload of frequencies without the tags to tell you what the heck they actually are. Anyone have an idea whose is the best in this area?

I got some bad news for ya. The same thing happened to me. You see, some of the 2026's have that jumper wire you can cut. But many of the later production models did away with that option. The hole's there and it's marked right, but nothing to cut.

You can't modify that one very easily.

Tell ya what you can do, hang onto that scanner and cruise the pawn shops for a model that you *can* modify. If you see one, sell them your model, and that'll take a little out of the bite on the model you *do* want.

It's still not great news. I know you're disapointed. I sure as hell was.

Sorry man.

> his tickets?

I heard that the FCC revoked his license after several problems
with him in the late 1980's. But when I called the FCC to ask if
he had ever held a commercial license they had no record of it so
it seems like that may have been some fantasy.

> Also when you search commercial they changed that stuff a few years ago to
> just a general commercial class license.

Right! The 3rd class radiotelephone license was dropped. The 1st & 2nd
class radiotelephone licenses were combined into the "General
Radiotelephone
Operators License". It seems to me like that happened in about
1985(?). The
General ROL license was then lifetime as opposed to the 1st or 2nd class
which was renewable every 5 years.

> You have to be more careful searching that data base IMHO.

I was. Do you have any data to point differently?

Source record: 144753

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX.
We do not believe this to be a coincidence ....

Message-ID: <35F4B9DF.C00FB71@azstarnet.com>
Source record: 144754

A Local Frequency Directory is better. Lee, databases can only represent whats actually on FCC records. Most communities and states license ALL frequencies to the city or state, with no description of what specific city department will be using it. The FCC doesn't care. You can find this info out (sometimes) by checking out the Address and Attention fields of databases like PerCons. For example, a frequency may be licensed to "Tucson, City of". But on closer examination, the address field may be "Road Maintenance Yard, 250 N Main" or "Police Headquarters, 75 W State St." Also, the attention field can give it away. The frequency being used by road maintenance department may say "Road Maintenance Director" or "Jim Smith Dept Road Maint". Also, if just an address or name is shown in these fields, do a little more detective work and you can ascertain what city building or department is at that address, and you can also call and see what city department "Jim Smith" heads if that is all that is there.
Aside from a little detective work like this, the best source for every scanner listener is a frequency directory made locally, or at least a regional one with local people who contribute. Call around to radio shops, ham radio stores, and electronics stores and ask if they have any frequency books made locally. Take a look, and if what you see is what you were looking for, there you are. Local books are usually combined efforts of local scanner listeners who've been listening for years and "figured out" all the scanner info you would like to know. Support them and their efforts! Good luck.

I got one free today too. I bought about $30 worth of connectors, PC board,
switches, op amps, and transformers and a couple other doodads. I got the
impression I would have got it free even without a purchase, though the
cover has $2.95 on it.

Decent low band reception requires an antenna of a longer wave length than what is normally supplied with a scanner, especially the rubber duckies. Try using a telescoping whip antenna. Radio Shack sells a nice stainless steel one, with a center loading coil. Or check out Grove Enterprises.

If your talking about the Uniden Bearcat 210 XW scanner, it's a 20 channel desktop scanner with a green LCD Display, covers 30-50, 138-174, and 406-512 MHz NFM Mode. For a scanner this old, the recieve is quite nice and comparible to some scanners on the market today, but it's freq coverage is very limited. I think I picked mine up for under $4 at a yard sale. Hope this hepls. 73

Put simply the PRO 90 can't be modified for Cell Phones. The cordless frequencys are in the 46 thru 49 Mhz range think mostly 46 and 49 don't know the exact frequencies and also 902-928 range I believe for 900Mhz Cordless phones.

NOTE: Lots of 900Mhz Cordless phones are digital or Spread Spectrum and can't be listened to. My 900 Mhz phone is digital and my calls can't be picked up by any currently available scanners.

I personally don't care if you listen to them (all my cordless and Cell phones are digital) but you will find that you will get bored quickly with the phone conversations. Remember they are illegal to listen to and can result in rather harsh penalties.

Yeah I listened to both cordless and Cellphone back in the early 90's when it was legal and got toally bored and currently don't bother with them.

PS I think the law saying receivers cant receive them is stupid. IF you don't want people to listen buy a digital cellphone and have a digital provider or a digital and/or spread spectrum 900 Mhz Cordless phone

.

> 73 and Thanks

Does it work with Win95? Yes, very well.

The radio is a trade-off. It is wide banded and works well generally, but. . . It is subject to front end overload (particularly from FM band radio stations). It is installed in a particularly noisy RF environment. It lacks (1000i but NOT 1500i) a true SSB detector, and suffers from the same problems any radio would when using a BFO to provide SSB detection. It does not have selectable filters.

Those are the bad things. The good. . .

The software is very slick, so slick that third party software has not really shown up yet (not so the PCR-1000). (Also, I am working on this.) The FM band overload can be fixed with a $4 filter from Radio Shack (but other overloading may be harder to remady). The radio has a high scan rate. The spectrum scope makes the radio worth putting up with the problems (to me, YMMV). It is a true 1000 channel scanner, and you can have as many groups of 1000 as you have hard-drive space for.

I have gone to drastic measures to address the RF noise (internal to the PC) problems, with a fare degree of success.

This radio is not an R-7000, but it consistantly performs well. I got it to use with my R-7000, PRO-2004, FRG-7700 combination, not to replace them. But I find myself using the WinRadio most of the time.

Any thing else?

So Long,

There is generally a repeater fee for GMRS and repeater seems
be very few....At least in the Northern CA. area.
I do use FRS (Family Radio Service) for short range excursions...generally good for about 1/4 to 2 Mile range.
Perhaps a route you may want to to look into is 2 metre ham.

>> You friggin' loon.

He reacts to each post about Bill and of Bill`s material like it was posted just to aggravate him. He claims I started this thread. And he is right. All I had to say was that Bill Cheek could use a little help from his friends, and Mackey went over the edge again. The REAL question is, why does he feel he has to have a knee - jerk reaction to each and every post of this nature ? An examination of his actions reveal the underlying motives.... He misses Bill worse than any of us do ! Bill has become his obsession, his WHOLE LIFE. How is he going to garner any glory without him ? Without Bill to bounce off of, he is nothing again. Bill OWNS him. He MUST feversishly read the scanner news groups every day, 10 times a day, just to hear about him. Bill fills his every waking moment..... Bill is a father figure to be rebelled against, you see, as any male authority figure in his life must be rebelled against. Daddy must pay for his sins ..... But his relationship with Daddy is ambivalent. (He hates him but he loves him).
He is a fascinating psychological study. He will exhibit this behaviour in any group he frequents on a regular basis. This means he has no self - respect. He has no achievements to show, no knowledge or expertise,

and so he must belittle the achievments of others. He is, forever, "The guy who fought with Bill Cheek". What tremendous status ! I am impressed. Aren`t you ? He has completely misjudged the way adults will react to this bizarre mental aberration of his. The rest of his profile is too gruesome to go into.

Not to get off the subject, but perhaps some of you would enjoy reading "Journey into Darkness" By John Douglas..... Should be able to find a copy at the local library.....

>Buy a portable TV. The audio is in Wide FM the visual in AM so a
>narrow FM scanner won't do either.

FYI

US broadcast FM uses +/- 75 kHz (150 kHz bandwidth) for 100%
modulation.

US TV audio FM uses +/- 25 kHz (50 kHz bandwidth) for 100% modulation.

Most of the narrow band FM communications that scanners monitor use
15-20 kHz bandwidth.

Willi-arsch, when are you going to stop making trouble and start posting something about scanners? All you ever whine about is how nobody likes your little butt buddy Mackey.

Oh, I've been sending complaints to your ISPs quite regularly. For instance, I reported this morning that you have been harassing me via e-mail and that you have e-mailed me child pornography. A copy of that message, along with the images, are also being mailed to the authorities. See ya, wouldn't want to be ya!

They all claim to have the lowest prices but, someone is always lower somewhere! Sure you can ask and they agree to meet the lowest price of competitor, but basically, this is false advertisement also. My point is the American businesses peddle us bull shit and MOST consumers consume it eagerly.

Besides, most consumers do not have the "higher level" of intellilect you obvisouly have, so the RS answer does sound reasonable.

<<<< Snip snip snip >>>>

>One has to wonder why Tom is working at RS! Check back in a year
>and let us know if he's still there...
>
>
>...Andy
>

Tom told me directly, he was there because he like to buy RS items and was afforded a discount. Besides how many people remain in these low paying "Service" jobs for 20 or more years? I can not think of one person whom I personally know that has, even if they wanted to, they were let go before being vested in the retirement system.

My point is enough bandwidth has been wasted in the last 10 years on the net over this topic. Lets face it we all agree upon the following RS points.

1. RS does not always hire first rate engineers nor technicians to work in their stores.
2. RS does not always have a precise answer to all questions posed 100 % o

the time.
3. RS does not pay the lowest workers a living wage.
4. RS does support the Telecommunication Act, thus trample scanner users rights.
5. RS does block their scanner from Cellular freqs and mods, thus trample scanner users rights.
6. RS does not sell manuals any more to scanners capable of receiving 800 MHz, thus trample upon scanner users rights.
7. RS is the root of evil thrust upon the electronic hobbyist community.
8. RS employees are not the most content group of people with their jobs, and some times let it show.

From: Bob Grove <bob@grove.net>
To: Terry Lee <terrylee@interl.net>

Hi, Terry:
The delays have been embarrassing, but necessary. It seems that
every time
we had an improvement, we found another glitch. But there is good news: The

master is at the duplicator's now, and it is scheduled to be run September
14th; as it soon as we receive that box back, they all go out!

Thanks for your patience; you won't be disappointed. It's a
hum-dinger of
a program (It should be after all this time!).

Best regards,

Bob"

Duplexers, in theory, will work great.

But, this is your best bet: an inexpensive but well-working automatic switch which can be placed on the antenna jack, and when RF energy is detected, the antenna line disconnects for as long as any RF energy is present. I have no idea where these can be found, but I'm sure some place like AES has them.

Be careful with any of this, as RF energy is wild when it comes to frying receivers!

I have checked with Radio Shack. They can supply the front half of the plastic case for the Pro 34 but not the back half. I know someone has a junker that I can buy the back case from. Or I will buy the whole scanner if the case is good. I think the Pro 37 is the same.

5297. Civil Aviation - North Atlantic Radar View and Log

Newsgroup: rec.radio.scanner
Date: 1998-09-07 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.980907175239.2285N-100000@alfa.ist.utl.pt>
Source record: 144834

Hello

Here is a log for New York, Gander, Shanwick and Santa Maria ATC
Centers.
Interesting to note that Severe Turbulence was reported in Santa
Maria Oceanic Airspace north of N37 and east of W35. The controllers gave
this SIGMET to all flights entering this area.
There were also many TWA flights receiving company messages for
minimum required fule at the destination.

You can find a radar view of the Atlantic airspace at the time the
log was created by going to:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex6.gif

I've also included on the radar view the Swissair Flight 111 crash
location.
Hope you enjoy the log and the view.

Best regards, Andre Brandao

I am planning on buying a hand held scanner and have been trying to get in fo
on what would be the best type for my needs. I am looking for a scanner that
either has no gaps from 45mhz to 1300mhz from the factory ie euopean models or
models that can be mod.If you have one of the following tell me what you think
AO8000, AO8000B, AO8200(can this be MOD), BC25000XLT, BC3000XLT,
UBC3000XLT.

PLEASE take the time to answer this I need some good experienced Help

Ive seen a used RS pro 2006 for sale at under $200.00 with a warranty of one year. are there things I should check out on this scanner before I buy it? the unit hasnt been modified, and comes with a photocopied manual. serial number is 070825 with a date code of 8A3. what does the serial number and date tell about this unit? Thanks for your help in advance.

Freqs for the RCA dome are on MECA 2. The IndyScan web page mentioned above (members.iquest.net/~aeverhart/) will have the MECA 2 freqs as well as the talk groups. Note that MECA 2 is a trunked system, so a trunktracker will be your best bet to listen in on the dome freqs.

From what I've seen at Ebay, they will go from $175-$200. There are
exceptions but that would be close.

Brian

Does anyone have any Regency scanner crystals they would like to sell? Or does anyone know of any mail order stores where I can order them?

I am looking for 155.550 Mhz, 154.370 Mhz.

I would also take BearCat Crystals if you have them laying around.

Thanks

Bill

Assuming it is not THAT old, here's how to program it:
go into the VFO mode.
enter the frequency you want.
press the Function button
press the Memory button
Viola

The BEST (and chepest) x-tal place I have EVER found is called G& G Communications.
their web-site is at:
http://www.iinc.com/ggcomm

They sell x-tals for scanners, and pagers
They repair scanners/pagers
They sell pagers/scanner parts.
Check them out.
The owner's name is Gerry.
It's a good place to deal.
It is located in LeRoy, NY (near Rochestor)

We're not talking about Cheek, although that is all you want to talk about. I'm still waiting to find out about the investigation into your selling licenses that was described here not long ago. While I maintain that it is not fair to condemn you for any alleged activities of an illegal nature, it is surprising that you have not been more forthcoming in answering your critics. Is it or is it not true?

By 2005, the frequency spacing for several bands will be
reduced so that in 405-512 uhf, for example, channels will
be assigned .00625Mhz apart rather than the current
..0125Mhz.
Since most scanners don't have a .0000x place and scan
this range in 12.5Khz steps, they will be made obsolete.
The change-over is already occuring with the federal freqs.

Comments?

Say what?
Are you sure of your facts?
I seem to remember B Cheek saying he had an amateur license.
I threw all of his newsletters away when he got so crazy but I seem to remember it was in there. He must also hold at least a class two commercial license since he worked on and modified CB's and other radios for which such a license is required.

I think you are wrong about that one John. You had better apologize to him when you see him next.

ki4je
Ps. I hold both commercial radio and amateur radio licenses. It is fairly common for one who has a commercial license to also hold an amateur license. It is not so the other way around.

I got the pro-2050 on clearance for 199.99 (from 299.99). But I'm wondering if the sales are to move out scanners already becoming obsolete in light of FCC refarming (cutting channel-spacing to .00625Mhz and eliminating strict radio-service catagories which some scanners use for presets).

Your data is SERIOUSLY flawed!

During the months of July & June nearly all my posts were canceled
by a rogue canceler, causing me to have to re-post all my posts. This
would in effect DOUBLE my posts from the true number. So for June &
July, cut my figure in half & you'll see a more true representation of
my posting figures which would be in the same range as the other months.

Notice that is May I had only 22 posts. That is because Cheek & I
called
a truce. After about 2 weeks, Cheek broke the truce. I then gave him
warnings over the next couple weeks, then started in on him again since
he
shose to break the truce. I did warn Cheek, he chose to decline. Now
he has
lost his ISP.

No, he does not have one & has stated so in the past. To confirm,
go to http://www.qrz.com & do a name search for Bill or William Cheek.
Bill does not have an amateur radio license (unless he just received
it in the last month or two!)

> remember it was in there. He must also hold at least a class two commercial

> a license is required.

Actually there was no license required to modify CB radios because that
is
illegal. Anyway, Bill has claimed to have a commercial license but can
never produce a license number for it (the FCC issues one to EVERY
license).
A search of the FCC database for FCC commercial licenses shows NOTHING
for Cheek.

> I think you are wrong about that one John. You had better apologize to him
> when you see him next.

hehehe, not needed because I am correct.

Be sure you start/stay away from the beams/cross members before you
drill. I drilled from the undercarriage upward into the
flooring/carpet and hit the bottom 2-4's of the walls..
everything had to be filed larger in order to use a coat hanger
to push/pull cables thru the flooring..

Source record: 144875
Cross-posted to: alt.radio.scanner,rec.radio.scanner

All electronics become obsolete. The only question is when.

I'm sure this will eventually make a large portion of the frequencies in use impossible to listen to with the current breed of scanners; however, every business, public service agency, military unit, etc. won't be spending the money or time to obtain licenses for new frequencies and have their radios reprogrammed right away -- assuming they're even aware of the change. Scanner manufacturers will probably be producing scanners with .00625Mhz spacing once these assignments become popular, which may not be for some time.

Why does the CHP use an odd split freq configuration. (Dispatch out F1, Car talkback F2). What is the purpose and advantages to this as opposed to a conventional reapeater system?

Thanks

Mmm, It is pretty simple Creeper..... *I* want to make a collection of System IDs. Its my project, it serves a great service to the hobbiest community, and you CAN'T find this sort of information at Warren's Site. So WHY beat-it-down? If you aren't interested.....DON'T VISIT !!

Warren and I correspond often, and would probably agree that his site focuses more on the users of trunked systems and the shear amount of broad information and up-to-date news, where-as my site focuses on the more technical aspects and intricate details of TRS's. Both have their place, both are different. You know, when I announced a year ago that I was going to start the Trunked Radio Systems Information homepage, folks like YOU said phrases like "Why do you want to do that" and "There are already too many" and "You are an idiot, stop wasting you time." Once again, EACH of you nay-sayers have been and will once again be proven wrong. The page now gets well over 100 hits daily - no bragging here, just a testament that this page has proven *some* service to the hobby. Tell me creeper, have YOU ever visited my page?

....and, in response to my post, I have received over 150 system Ids with their respective identifiers. Tell me Creeper....do YOU have any sysids to contribute from your area?

Go take a look at what positive oriented folks in the hobby can contribute to making:

http://web2.airmail.net/lblant1/trunked/sysid.txt

Thank you for your time.

-Lindsay Blanton

You didn't indicate whether this communication would be personal or business related. For instance, personal communication only could be handled nicely with ham radio. You could get the easy-to-pass Technician license (no Morse code required) and easily talk 10 miles on the 2 meter band. Some ham clubs have repeaters as well, priced at just a fraction of what commercial repeaters charge.

Is there a lack of privacy on CB bands in your area? You might also consider a CB radio with upper and lower sideband. In my area, side band is almost completely empty, while the AM channels receive lots of activity. You might ask a friend or dealer to determine whether that would be feasible. As long as the terrain is level and good antennas are used, a CB on side band would be satisfactory.

10 meter ham radio is also possible, but requires you to pass a Morse code test of 5 words per minute. However, the FCC is examining this currently, and there is a move afoot to eliminate all Morse code. Lets see if it is successful.

Most business two way systems use repeaters in this area, although some permits are granted for direct communications in the 450 mhz range. However, even this type of transmission isn't scrambled, so I don't know how much privacy you need. Actually, your most secure (private) system would be a business band trunking repeater, since most of that radio traffic is incredibly boring to listen in to by scanner folks. Furthermore, each time you or your partner stop talking, you move to a different spot in the "trunk" so following the entire conversation would be difficult (not impossible, however)

So you see, you asked quite a few questions in one. I hope this helps you narrow down some of your choices depending on which of the features are most important to you.

5356. BCT-10 for TRADE

Newsgroup: rec.radio.scanner
Date: 1998-09-08 00:00:00 UTC
From: Brian Trotter <btrotter@REMOVE.earthlink.net>
Message-ID: <35F56EF0.A689A9FD@REMOVE.earthlink.net>
Source record: 144627

I am interested in trading my Uniden BCT-10 beartracker scanner.

The main things I am looking for are:

At least 50 channels (100+ preferred)
800+mhz range (prefer one that is easily modified)
Portable preferred, but will take a base if it has a DC input.
In excellent working condition. I dont care so much if it is scuffed up
or scrathed, as long as you can read the display, all the buttons work,
and you can read the buttons.
Manual, and power cables preferred.

Email me if interested. remove the REMOVE from my email address when
replying.

|> Well, I guess the question of why comes up.
|> If you want to transmit on Police frequencies, you first have to know
|> what the frequencies are!.

Not hard to find. Radio Shack sells guides listing the frequencies and
often will have a free photocopied list of local police frequencies.

|> You then have to get a commercial radio which can cost in excess of 2
|> thousand dollars. Then find someone to program the radio (good luck
|> :-)).

Many ham radios can easily be modifed to xmit on these bands. Instructions
are available on the internet, and may involve minor soldering or just
cutting a wire on some older radios. Radio price ranges $200-800 new,
less used.

|> Even after that, get ready to spend thousands on Lawer fees, and/or
|> Fines, as it is VERY illegal to own a radio that will TX on police
|> bands ...

I don't think it's illegal. Citations of relevant laws to the contrary
would be appreciated. However, even if it is legal, you can be
harrassed, prosecuted, and/or have to spend thousands on legal fees even
if you are "right." You can also lose in court even if you're right.
Big money and connections often speak louder than the law in court.

|> ... and even more illegal to do it!

I agree it's illegal except in emergencies, and risky even then for the
risks cited above..

I think it's also (excluding emergencies) illegal to use a modified
radio to transmit on police (or anything but ham frequencies) freqencies
even if you are licensed to transmit on those frequencies. The FCC
generally requires some form of approval of the radio for the specific
frequency used.

I have the same problem with my computer interfering with my scanners except i have no external antennas.I also have many radios going at once and sometimes one will lock the other radio on a specific frequency until i turn off the other radio.Is there a limit on how close you can have scanners next to each other.I would like to eliminate this problem .

I expect the new trunktracker mobile radio to be very similar in operaton to the Pro-91 portable. I think the claims of having CB radio reception is a misprint in the catalog. I guess we will have to wait a few months to find out for sure.

In Clear Lake Skywarn uses the W5RRR repeater at 146.640. I believe they have a net on Thursday nights at 8pm.
Also the Emergency Operations Center (EOC) uses the City's trunked radio system. You would need one of the newer trunk capable scanners to listen to it. Their frequencies and talkgroup ID are listed at http://members.aol.com/jdhtex/houstonscan/city/city.html

Message-ID: <1998090820281900.QAA11251@ladder01.news.aol.com>
Source record: 144640

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

>probably have to move away from classic analog FM, in favor of
>ACSSB and digital. When that happens, it's time to trade up for a
>new scanner or get out the soldering iron.

The FCC is now looking at the 5kHz spacing of the 220 MHJz channels for the 150 MHz band. They just approved SECURICOR'S bid to have "Linear Modulation" approved for 148 to 172 MHz. This is a modified ACSB not compatible with SEA/EF Johnson's 220 MHz stuff....which COULD be heard with an Icom 7000 or 7100 (plus the 8500 and 9000) by switching to SSB demodulation.

The split channels will probably only show up in the major markets. In the small towns there are stikll plenty of tube rigs used by the Sherrif, the Dogcatcher, etc ...at least on the base station side). Let's face it, FM will become obsolete, along with your scanner, but it'll be a while yet.

Yeah Leonard. I went and purchased the PCR-1000 from Scanners Unlimited. I have now had a week to check it out thoroughly and it was actually easy to master. I was shocked at how competent in the HF area that it is. I love the pass-band tuning for that. I ordered the DSP module which I will have to wait for, but even without it it is amazing. At this point I would only prefer to have a shot at the new Winradio WR-3100e external unit. At $2000.00 it won't happen soon, but perhaps some day they may consider lowering the price a little. Have fun.

It really won't matter too much which portable scanner you use, even
my Pro-43 was eatten up with intermod at the IRL race in Atlanta. I
took it to the ARCA race, and then programmed my /\/\ MTS2000 so it
would cut down on the intermod, but it didn't matter. I finally took
off the antannae and used a paper clip (for a very small wave
antannae) and it worked great!

I have had a AR8000 (european bandplan) since 1995. I works well but
I have never, Imean never, been able to make it work with a PC. I
have the interface sold by Jim Springer at Computer Aided Technology.
I sent the rig to Jim at one point and he says it works, but not for
me. Even tried a different PC. Other that that I really like the
radio. Am considering getting a AR8200 or a WR-1500e in a few weeks.
The WR-1500e looks nice but not sure I like being tied to the PC.
Particulary when the wife wants to use it!

Good Luck with whichever you choose.

Which sure seems like it can easily be dealt with. Motorola used this for
their cordless phones. Perhaps that is why Motorola has dropped out of the
cordless phone business. their product was in effect defective...

> scanner.

If I were to guess, you are getting interference from your CRT and not your computer. Try leaving your computer on and turning off the CRT and see if the problem goes away. Some CRT's emit huge amounts of electronic noise, despite the FCC approval decal on your CRT. (It may not affect you but your future kids will make a great conversation piece for the neighborhood.....two heads, 3 fingers, etc) If it is the problem, you need to try shielding the back of the CRT (aluminum foil, or buy a shield) or try to move your scanner until the problem goes away.

Good Luck and thank the FCC for allowing this fiasco to happen.

I need to put up new coax to my antenna. What would be better:
using 9913 and then using adapters at each end to go from the UHF plug
(the antenna requires an F connector and the scanner requires a BNC)
or
using something like RG-6 and not having to use the adapters.

Thanks for any help.

>Since Mr. CBRAmbo wants to play the 'Pester Eric Oyen" game, then he can
>start explaining his own words in various places where he has harrassed
others.

Perhaps you had better start by explaining just exactly what this "harrassment"
is that has (allegedly) taken place. I simply asked a question; I inquired as
to the whereabouts of "THE OYE BOY" over the past weekend.

>Now, as I explained to him directly in another post, I was away this weekend
>at a friends funeral and could not be reached. Now that I am back, I shall
>address this.

Please do. We're all waiting with such high anticipation for your expert
analysis.

>It is therefore required of CBRambo that he cease and desist all activities
>designed by intent (or accident) to harrass me or to use my name, callsign or
>any other likeness of me, my personal information or other intangible assets
>without my expressed written permission (and this permission shall NOT be
>given at any time for any reason to him). Further, He is also required to
>cease any e-mail contact he may have with me immediately

Here we go again...OYE BOY is gonna play WANNABE LAWYER and TALK TOUGH to me.
A few points you may wish to consider here, o' illustrious barrister:

1) I have never used your name nor your callsign. Apparently, you have assumed
that "THE OYE BOY" refers to you personally since you have taken it upon
yourself to respond to postings where "THE OYE BOY" is mentioned. Again, I
have never made mention of either your name or your amateur radio callsign.

2) Here's a free tip from the clue train: I do not need your "expressed written
permission" to respond to you in a public newsgroup. Over the past few years,
you have posted literally hundreds of messages on the radio newsgroups
(messages which you later cancelled and removed from the archives of DejaNews.)
Sorry, Mr. Wish-I-Was-An-Attorney, I do not need permission from you to
comment on your behavior on this newsgroup.

3) I have never initiated e-mail contact with you. Period. Before you respond
with your usual line of nonsense about how I am also four or five other people,
I would ask that you be prepared to prove this if in fact you choose to respond
in this manner. Again, I have never exchanged e-mail with you. Accept this or
prove otherwise.

>CBRAMBO is also required to cease and desist any activities designed by
>intent, or accident, to foster a hostile environment toward me or other users

>in the groups listed below. A copy of this notice is being sent to
>abuse@aol.com for further handling.

I am curious: just what exactly is your definition of "abuse?" Obviously, it is not the same as that of my service provider. You have threatened to "report me" to AOL on numerous occasions, yet I am still here. Why is that? Obviously, your definition of "abuse" is flawed in the opinion of my service provider. Quit your whining, will you? AOL could care less whether you personally approve of my USENET postings. They exist to serve the concerns and the desires of their paying customers. Not you.

>CBRAMBO, you are done. do not call on me again, as I will not respond. I also
>encorage others to cease responding to his jibes, remarks, inuendo's and
>libelous remarks. Since such treatemtn generally successed, he will go away
>when his audience does.
>
>
>Eric Oyen

Why don't you take your own advice, Mr. Oyen? If you do not care for my postings, DO NOT RESPOND. Wouldn't this have been simpler than composing a lengthy dissertation as you did? Next time, think before you post. Or at least read your own comments before hitting "send." You will likely be embarrassed as you realize how foolish you look when you begin TALKING TOUGH and posting nonsense like this in a public forum.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

No you don't!!!! The First Class Radiotelephone license (which had to
be renewed every 5 years) was dropped nearly 15 years ago. It was
replaced with the General Radiotelephone license.

At best, your First Class Radiotelephone license expired 10
years ago or more.

Use RG-6. That answer of course depends on a lot of factors that may make 9913 the best choice.
But, if you assume a 100 foot run between your radio and the antenna, the feedline loss for the two choices are as follows:

Freq (MHz)	9913	RG-6 (Loss in dB)
100	1.4	1.83
400	2.9	3.89
700	3.9	5.17
1000	4.9	6.22

So, at the max freq you would use, 1GHz, there is a 1.32dB difference between the two (9913 being better). Now consider the connectors. WIth N connectors on the 9913 and adapters to go to F on radio and SO-239 for the Antenna, you will realistically get .2db loss with each of them (on each end). So subtract .4 dB from that and have a .92 dB difference between the two.

The old fashioned "S" meters indicate 6dB per unit, i.e. the difference between S9 and S8 is 6dB. In other words, you would not see the difference of a .92 signal on a meter.

The lower the frequency, the less the difference. RG-6 is a lot easier to use.

Cheers,

Rick

I couldn't agree with you more. I went into the local mall located
RS today (a corporate store) picked up a few parts and asked about a
catalog. The response was "that'll be $2.95" and I just said "I'll pass".
It's their loss.

I also have a shelf of catalogs that I regularly use and make purchasing
decisions from. I've not paid one penny for the privilege of ordering
from any of 'em.

You see the Governement didn't like scanners that could be easily modified for cellular, therefore scanners are now made with cellular blocked at the CPU.

Hi there,

is there anyone out there who would be so kind to send me a copy
of his/her manual of the Uniden Bearcat 220 XLT. Or send by email :-) ?
I'm dutch and we don't have a local distributor so i can't order one
here. Ordering one from Uniden will become to expensive due to
transactions costs from europe to the usa.

I'd really appreciate it if someone could help me.

The adress :
Marco van Weel
p/a Laanstraat 61
NL 3473 BB Baarn
The Netherlands

Thanks in advance

Best regards

Marco

> you don't know, do you ?

I receive many catalogs free that have not only pretty pictures advertising the seller's products, but useful information and interesting stories as well. They receive prominent places on my bookshelves, which gets their name seen by me several times a day (a marketer's DREAM). I, in turn, recommend their catalogs to my clients, who usually end up buying from these companies.

If Radio Shack wants me and my clients to look at pictures of their wares in their high-quality publication on quality paper, they will either make it worth the price of a good magazine to me, or they will give it to me at no cost to me and consider it to be part of their advertising budget.

Perhaps all those years of REQUIRING name/address/phone number to buy a battery, then sending their high-quality publication on quality paper to everyone who buys a $3 battery once a year, has caught up with them. Or maybe the marketroids who glide around Corporate all year chanting, "I can sell AIR! I can sell AIR!" have taken it too much to heart and begun to gloat that people will pay $4 to get their advertising. Whatever it is, at some point someone there will realize this isn't the Victoria's Secret catalog and this isn't working, and they'll start trying to get their advertising distributed as widely as possible to a properly targeted market instead of what they're doing now or have done before.

Since Mr. CBRAmbo wants to play the 'Pester Eric Oyen" game, then he can start explaining his own words in various places where he has harrassed others.

Now, as I explained to him directly in another post, I was away this weekend at a friends funeral and could not be reached. Now that I am back, I shall address this.

It is therefore required of CBRambo that he cease and desist all activities designed by intent (or accident) to harrass me or to use my name, callsign or any other likeness of me, my personal information or other intangible assets without my expressed written permission (and this permission shall NOT be given at any time for any reason to him). Further, He is also required to cease any e-mail contact he may have with me immediately

CBRAMBO is also required to cease and desist any activities designed by intent, or accident, to foster a hostile environment toward me or other users in the groups listed below. A copy of this notice is being sent to abuse@aol.com for further handling.

CBRAMBO, you are done. do not call on me again, as I will not respond. I also encorage others to cease responding to his jibes, remarks, inuendo's and libelous remarks. Since such treatemtn generally successed, he will go away when his audience does.

Eric Oyen

>
>At the FCC.

Very good John. I ask a simple, polite, and intelligent
question, and this is the response I get from you.

The reason I ask, is that the FCC themselfs, have stated
that the database they have of commercial license
holders is incomplete, and that they will not normally
search it for callers. One of the reasons is that it is
not complete.

They stated the only sure way to know if someone
has a commercial license, is by seeing the license.

I was merely wondering if you had found something
other than that.

Yet I get a smartass answer. Thanks.

John, as you know, the test for the FCC Commercial license was made
into something almost insignificant. Durn near anyone can pass it,
and if you don't ace it, or at least the electronics part, then you
need help.

Basically. The thought at the time of changing the program, was that the industry would come up with something better for a test of proficency, than the GROL. The industry responded with a disjointed testing program, many different agencies came out with a test, and it was/is a dismal failure all the way around.

There has been talk about changing the testing again, and Motorola has started the groundwork for a program to "certify" people who work on much of their equipment, but it is still not an active program.

Ken, it is not clear to me. What I read is it is legal to use any radio under part 97 to make the emergency call. It does not state "any" radio especially one that is on a police frequency. Your ham license is not a license to operate any where you want.

Try again!

Oh, puh-LEEZE. I have a First Class Radiotelephone license, required for my job in television. I got it through a license mill, studying the test questions. That was back in 1981. I couldn't tell you the difference between a Colpitts and a Hartley or a Harley-Davidson. I know enough of the amateur questions to get my extra class, but the code isn't up to speed yet. All my knowledge is memorization rather than knowledge.

I *finally* heard related activity on 5696, with an announcement that
the secondary channel was 8983, or thereabouts. It was clear for a
few seconds, then signal levels dropped down to where I could tell
there was a signal present, but couldn't understand it.

The Bearcat 210 XLT is a 40 channel with the same coverage as below.
Great scanner except it's a little slow and the coverage lacks some.

There are several mods for the MVT-9000
mod 3 gives you preset.
All mods have to be done by a dealer. $$$

5449. Motorola Trunking System ID collection

Newsgroup: rec.radio.scanner
Date: 1998-09-08 00:00:00 UTC
From: trunking@yahoo.com
Message-ID: <6t3j6f$l5h$1@nnrp1.dejanews.com>
Source record: 144720
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello Everyone!

I am attempting to start a collection of systems IDs for Motorola trunking systems across the nation and build an online table so folks can cross reference. So now when you are picking up some DX (Gary!) or traveling through an area and you hear a trunking system that is new to you, you'll have a de-facto reference to look up the system.

For those of you that don't know what a system ID is, here is your answer. Motorola trunked systems transmit a little piece of data every second or so on the data channel the uniquely identifies the system. Motorola radios are programmed to look for this system ID for the systems that they are programmed for. Applications that can decode this system Id from the data channel include trunker. For more information on trunker, see
http://web2.airmail.net/lblant1/dfw/digital.htm

So, if everyone that knows a system ID for a local system in your area....or ANY system, please send to me at lblant1@airmail.net I'd like to see the info in the following format:

SYSID Control Channels System User/Name City State

Watch the list get created and built at:
http://web2.airmail.net/lblant1/trunked/sysid.txt
NOTE: that this is not created yet, but it will be the URL for this sysid list.

I Look forward to your system ID's !!

Thanks!
-LB

5450. Houston, Texas Emergency Frequencies

Newsgroup: rec.radio.scanner
Date: 1998-09-08 00:00:00 UTC
From: Joshua Carroll <jcarroll@nol.net>
Message-ID: <35F54031.A8A40F7C@nol.net>
Source record: 144721

Does anybody know what the "hot" frequencies would be (besides police) for a major emergency, like a hurricane? I have the Skywarn (146.840) for Downtown, are there other repeaters for Southeast Texas, like Galveston or Chambers Counties. So far people I've been in contact with haven't been much help, but maybe someone out there knows some info.

Thanks,
JoshCarroll

5451. Computer Interference

Newsgroup: rec.radio.scanner
Date: 1998-09-08 00:00:00 UTC
From: Joshua Carroll <jcarroll@nol.net>
Message-ID: <35F540C3.A3E8AFDC@nol.net>
Source record: 144722

Is there a way that I can block out the computer interference from my scanner. I have a small room and just one desk where I have my computer, scanner, TV/Radio/VCR. My computer seems to interefere with radio signals (not the TV/VCR really, since I have cable).

If it helps, my scanner is on an antenna outside properly mounted on top of an existing TV antenna.

Any help appreciated.
Joshua Carroll

When 12.5Kc first began to gain in popularity, it was simple
enough to tune to the nearest 5Kc slot - and that worked fine.

In fact, if you own a Pro-90, you *still* have to do that...
For whatever reason, the Bearcat clones don't do 12.5Kc spacing
on VHF --- whatever.

The point is, you only need to be in the neighborhood of the
center frequency (neighborhood = ~+-3Kc) to hear comms transmitted
in the FM analog mode that your scanner knows and does well...

To really make 6.25Kc spacing work, transmissions are going to
probably have to move away from classic analog FM, in favor of
ACSSB and digital. When that happens, it's time to trade up for a
new scanner or get out the soldering iron...

fab (fabio@butter.bump.net) wrote:
: By 2005, the frequency spacing for several bands will be
: reduced so that in 405-512 uhf, for example, channels will
: be assigned .00625Mhz apart rather than the current
: ..0125Mhz.
: Since most scanners don't have a .0000x place and scan
: this range in 12.5Khz steps, they will be made obsolete.
: The change-over is already occuring with the federal freqs.

: Comments?

That sort of depends... Isn't it illegal in some states to posess a
radio in a vehicle capable of RECEIVING police communication?

I have had an 855 xlt for several years. Now I am going to a few NASCAR races and want to take a scanner along to monitor the drivers radio communications. Which scanners would you recommend for this. Also what headphones are good for use at the racetrack? Would the stock antena be adequate? I want to make sure the "audio out" jack is stereo, the one on my old scanner only has sound in one ear (annoying).

Dan remove the "xxspam" from my email address if replying by email.

John I know it is illegal to modify CB radios. I was under the impression
that B Cheek legally worked on them at one time. I know he had a lot of
problems with the FCC just like he had here. Maybe the FCC quietly pulled
his tickets?
Also when you search commercial they changed that stuff a few years ago to
just a general commercial class license.
You have to be more careful searching that data base IMHO.
I'll have to pull mine and see what it now says.

Hello. I'm interested in trading a Radio Shack PRO-43 handheld scanner for either a Uniden BC-9000XLT, a RS PRO-2042, or a PRO-2035 base scanner. The scanner must work 100%, be at least 8/10 cosmetically, come with some kind of power cord, and the manual. Anything other then that is extra.

My PRO-43 works 100% and it around a 9/10 cosmetically, no mods done and I'm a non-smoker. It comes with a full set of Ni-Cad batteries, the original manual, rubber duckie antenna, belt clip, original packaging and box. It has a date code of "A004700" (I believe this one can be modified for 6-1000 MHz coverage). And I will also include the following modification sheets for the radio:

-Improved Audio Quality
-Double The Amount Of Memory Channels To 400
-Add An "S" Meter
-Extend Coverage To 6-1000 MHz Gapless
-Keyboard Beep Delation

If your interested in trading, please let me know. Thanks a lot for reading!

Been reading my posts lately, SportShoes? Of course you have. Probably already replied to 'em too, didn't ya? Probably got all excited when you saw that good ol' Phil decided to slap you around again, huh?

Well, before you go wriggling into another one of your whining sniveling "stop it or I'm telling" tyrades, I want to explain something to you. I want to tell you WHY I did that. And all the other users of rrs for that matter.

I did it because I felt like it. That's right. I just plain got a mean streak in me and decided to whop you one right across the gumline. No rhyme, no reason, no personal vendetta. You were simply there and I needed to vent. And, I'd like to say....thanks. I needed that.

Which brings me full circle back to the point I made to you WAAAAYYY back when this whole mess got started? You remember? In a nutshell, I asked you why you bother to hang around this dump if it's full of nothing but troublemakers and "cheek-a-likes" as you call them (further justifying - in your mind at least - your obnoxious and abrasive behavior, I might add) Why do you continually add fuel to the fire when you become the brunt of all the jokes - humiliated to the point of crying to the offending users ISP like a baby runs to its mama.

Some ISP's have listened and acted upon your pathetic whimperings, while others (quite wisely, says I) considered the source and ignored you. I mean, after all, your asking them to throw $20 to $45 bucks a month away, just for YOU. Not real smart, from a financial perspective.

And what was the answer I got from you? Something about "being here for the good of all rrs" or some nonsense like that, which got even more boos and projectiles from the peanut gallery.

Now, I will again implore to your common sense. If you REALLY want it to end, why don't you just go away? After all, if you had gone away last time, you wouldn't have been such an easy target for me....right?

For some reason I have a Intermode/Interference problem in the 854 to 856 area which I am monitoring using my Radio Shack Pro 2040. The interference is telephone transmissions on top of the other transmissions. When the frequencies I am listening to, are transmitting, by them selves they are ok. But, when a telephone comes on line it blocks out what I am listening to. Also I have to keep the squelch almost wide open to get a good signal. Regardless of what type of antenna I use it does the same thing. There is a telephone couple cell sites approximately 1 mile from us in any direction. Is there a filter I can install or anything else to block out the telephone transmissions or anything else i can do? Any ideas. Thanks, Bob

If it doesn't count down, turn the scanner upside down? Or spin it around?

Jeeez, no wonder I couldn't get that scanner to work.

I'll bet I can spin it *REAL* fast!

Maybe fast enough to hear MARTIANS!!!!

What can I receive if I SHAKE it real hard like?

What if I shake the SH*T outta it?

(Just curious, always trolling for a tip, ya know.)

5481. IC R-10 Computer control?

Can you use the R-10 with Probe? And I've heard I need a CT-17(?) CI in order to use any kind of computer control software (besides simple download, which can be done with a cloning cable). Is there any way to build one, or is that way too complex a piece of equipment?

YOU are the one causing trouble on this group, Mackey. I knew if I posted this again, I would get a knee - jerk reaction. There is nothing "troublesome" about my posting. The only trouble here is your constant need to reply to anything with Bill Cheek`s name on it, and the fact that the only attention you get on here is overwhelmingly negative. You even reply to simple re-postings of Bill`s material, with endless tirades about copyright violations that don`t exist, just so that you will have SOMETHING to discuss, since you have absolutely nothing to contribute to this group. You know, you shouldn`t be over-reacting in this manner. What if I DO get him re-instated ? What then ? I bet the men in the little white coats have to cart you away then !

If you don`t like what I am posting, then filter me out. You can`t do it, can you ? You are scared to death you will miss something.

I will post what I want, and where I want. You are not going to dictate anything to me. Don`t even waste your time trying. You are a complete bufoon. As we say up in these parts, you are about "three sacks short of a load". Anybody who posts anything about Bill controls you. Did someone appoint you moderator of this group ? I think not. Mr. "netcop" Macaloon. Everyone on both of these groups can see you for the complete loony tune you are. Maybe the rest of the folks on this group will write in, just to watch you blow a gasket if we succeed ! Now, if you don`t mind, I have things to do, and you must go search for your daddy -- bye

I have recently picked up a Sony Pro-80.
To enjoy all possible benefits of this receiver I would like to have a
manual or other documentation.
A photo-copy is fine too, of course.

Please let me know if you have one, I will happily reimburse you for
the cost involved.

Frank van Lindert.

Source record: 144563

I was wondering if you had ever grounded the shield of the coax. You know, many people don`t realize that the shield braid doesn`t "shield" anything unless you ground it. Or you could ground the chassis of the radio if the braid is electrically connected to it (The usual case). Just loosen up a screw on the chassis, run the end of about a three - foot wire under it, and put the other end under the screw that holds the face plate onto the wall socket. If scanner manufacturers would put a three prong plug on their product, people wouldn`t be having these troubles. ....

This info is especially important for people who are using a mobil scanner or handheld on a power pack. The transformer in the pack or wall-wart isolates it from ground. You must then supply it.

In the case of no screw to connect to , or plastic case, you can strip about 1/4 inch of the outer "hide" off the coax , and then wrap the end of your ground wire around the shield. Tape over with plastic electrical tape to keep from tarnishing up, and so it looks neat.

To the fellow that was running multiple scanners, run a common ground wire between all of them, and then connect it to ground.

This info really only applies to those using outside antennas that have coax runs going to them. It doesn`t hurt to go out and drive a ground rod right at the base of the mast pipe, too, and hook it to the bottom of the mast. Ground can be a funny thing at RF frequencies, and the higher the freq, the more you need good grounding. I have seen this method reduce the interference to nothing instantly in many cases over the years. (This info works wonders with CB, too , if you like to watch TV while on the air) Just about any radio device that uses a run of coax to hook up to the antenna can benefit.

Have a used BC3000xlt 25-1300mhz handheld for sale, Used one year, have box and manual and all that came with it including charger and battery of course. Just normal wear on it, nothing scratched or broke, works perfect. I replaced the rubber ducky with a radioshack 20-006 telescoping antenna with a coil and it picks up much better...this antenna is included instead of the ducky.

lists for $329 to 379 depending on if you scour the internet or just pick up a scanner world price list.

$250 firm, shipped on receipt of Money Order to any U.S. Address postpaid.

email me to hold for 7 days awaiting money order. (check delays 10 days)

5499. Re: ICOM R-8500... {Will FCC Refarming make current scanners obsolete}?

Newsgroup: rec.radio.scanner
Date: 1998-09-09 00:00:00 UTC
From: Ed Tobiasz <edt@popd.Accesscom.com>
Message-ID: <35F6972C.1690@popd.Accesscom.com>
Source record: 144568
Cross-posted to: alt.radio.scanner,rec.radio.scanner

To all:

The problem will not be with the channel spacings but with the bandwidth of the receiver. The FCC has already set the rules that all new licenses on the 12.5 kHz channels operate on no more than 11.25 kHz bandwidth. The new 6.25 kHz channels will be narrower still at no more that 6 kHz bandwidth. I believe that the refarming document states that the choice of emmision is up to the user.

The document that I refer to was released 3/12/97 and may still be obtained on the FCC website. It's tiled FCC 97-61 Second Report and order In the Matter of Replacement of Part 90 by Part 88 to Revise the Private Land Mobile Radio Services and Madify the Policies Governing Them. (their Caps not mine) 278 pages long. Well worth saving to your hard drive if only for the frequency tables.

Regards

Ed

5500. Scanner Ant.

Newsgroup: rec.radio.scanner
Date: 1998-09-09 00:00:00 UTC
From: Christopher Roy <scanner@together.net>
Message-ID: <35F69373.E888B4B4@together.net>
Source record: 144569

I purchased a mobile scanner antenna at a store in the state, where I live. This antenna is about 22" and did not have any type of coil at all. I discovered that my rubber duck worked 95% better than this one. I took it back and the salesman told me the rubber duck would work better (he must think I'm a fool.) He also told me that he sold 100s of them and he never had any complaints.

Did anyone here have a similar problem with this type of antenna?

BTW. I purchased the antenna that the Shack puts out and that one works very good.

Thanks Chris
p.s. I know it's hard to tell without a company name, but I rather not give it at this point.

Many on this group are proponents of using 75 Ohm coax. I am not one of these people. Run 50 Ohm 9913 or RG213/4 and keep your options open for future projects. RG6 is worthless to sell used whereas even a bundle of well used RG8 will grab a few bucks at a flea market.

I have both a PRO-43 and a PRO-34 with me when I go to the races and the
PRO-43 is tough to beat. It's small, it's high performance and if you
like to plug in all the drivers and NASCAR it has 200 channels.

Good points, but there's just something wrong about paying for a
CATALOG that will help you pick out stuff to BUY in the future.

In article <19980908181132OO.OAA00595@ladder03.news.aol.com>, GAM EYE
<gameye@aol.com> writes

Hi,

>any suggestions, experience, looking to buy this week. Will be using with opto
>scout and also PC

Pro's & Con's for both but if your considering the use of a PC then the
AR8000 is probably the way to go.

Software wise there is a wide choice for the AR8000 but not as much for
the IC-R10. By no means exhaustive the following can be used with the
AR8000 and/or IC-R10

JAV-Scan 8000
http://www.javiation.co.uk
Also supports the optional DX-8000 Narrow AM Board and
DS-8000 Speech inversion Board.

AOR PC-Manager For Windows
http://www.demon.co.uk/aor
AR8000

ScanStar Plus for Windows by Signal Intelligence
http://www.scanstar.com
AR8000, Icom R10

ScanCat Gold for Windows by Computer Aided Technologies
http://www.scancat.com
AR8000, Icom, Scout

ScannerWear by Radio Control Systems Inc
http://www.radioscan.com
AR8000 IC-R10

MacScan 8000 (Macintosh)
http:://www.designeq.com

Radio Manager for Windows by Ben Saladino
http://ourworld.compuserve.com/homepages/Ben_Saladino/
AR8000, Icom, Scout

AR8000 Channel Commander
http://www.odcombe.demon.co.uk/8kcc_readme.htm

AR8000 Toolkit (Macintosh)
http://www.mich.com/~eddy/works/

ARC for Windows
AR8000
http://arc.mypage.org

RadioMax (Future Scanning Systems)
http://www.futurescanning.com/

In terms of use with the Scout then there is no problem with either. The IC-R10 is "ready" to go with the Scout and just needs a simple lead whilst the AR8000 needs either a socket adding to the side or the use of the SAC-8000 lead from Opto/AOR - no great problem though.

The IC-R10 is slightly smaller and for many has a more rugged case. Some of the scanning features can be a little limiting - you can only scan one or all the banks and whilst each channel can labled (Alpha tagging) this label is only displayed when a channel is recalled manually - not when scanning which is when it is most useful. Overall "speed" is not as fast os the AR8000 either. If you are familiar with Icom equipment then the IC-R10 may "fit in" a little better though.

Hope thats of some help.

Cheers,

I got to both Nascar races in Michigan each year and have been taking
a scanner for the past 4 years or so. I started with a BC200XLT, and
now have a Relm HS200.....Both worked very well providing that

(1) You have a decent set of headphones to use. I bought a $75 set
from one of the Racing Electronics booths at the track, and it was
money very well spent...and

(2) Spend $5 and get one of the little 'stubby' antennas from one of
the souvenier booths.....They work very well at cutting down the
intermod from other teams. I see quite a few people in the stands
using no antenna at all, so this might work out ok for you too.

And make sure you have spare batteries!! I had mine die with 20 laps
to go a few years back, and boy, I was some pissed at myself!

well, you can walk into a Radio Shack
store and "pray" for one....

they will assist you in your hour
of plight....they have answers

or you can go to most HAM stores and
peruse their books and find more
than just POLICE CALL

Or stores that sell SCANNERS.

That works for most people....

Now, if you have a car you are lucky.
If not, then you do the yellow page
hula and ask "do you deliver?"

bill conduit
etc.

Hello, I purchased 2 receivers the other day from R.S. a pro2042 for 249.00, which I am happy with, and a DX-394 general-coverage communications receiver. the later seems to have some problems , while listening to an Air Force frequency, I don't recall which one at the moment but it was supposed to be in the clear(not enciphered), I could not get the voice to come in clear, it was always garbled and unreadable. I was in USB mode and I tried fine tuning it as much as possible but it never came in clear enough to understand.
the only thing I can get in clear is AM broadcasts.
Is there anything I can try? any other freqs to try and tune in? is it busted, and should I return it?

before I hear about how I should have bought the AR8000, that may be a purchase for next year.

9913 and 'N' connectors are a great way to go if you have the money and flexability are not a problem. 9913 is great low loss cable but doesn't flex well and is hard to use on a handheld scanner.

I use RG-6 on most of my scanners since I was able to pick up a reel of good quality Belden cable cheap. It is also nice since I don't have to use as many adaptors.

I will say ... From my experience, RG-6 is better than RG-8. I just replaced a 50 foot run of RG-8 with RG-6 and the improvement was amazing. I now hear 800mhz & 900mhz freqs that I had not been able to hear before.

Either way you choose will work, so good luck.

Hi all;

You might find this interesting.

Seems the Judge ruling on a lawsuite brought against the Martins has
ruled against the congressman suing them for invasion of privacy.

I'm not 100% sure, but I believe the BC-3000XLT can handle this. There's the ability to change the step size for scan on any band.

5546. New Pro-26's only $149!!!

Newsgroup: rec.radio.scanner
Date: 1998-09-10 00:00:00 UTC
From: rmcnaughton@ees.eesc.com
Message-ID: <35f820dc.4342344@ftl.msen.com>
Source record: 144377

I have a large quantity of RadioShack Pro-26 200 Channel handheld scanners. They openly scan from 25mhz to 1.3 ghz.

These are rated very well in internet reviews, and they are becoming very hard to find. One reviewer noted that, if you don't pick up one of these soon, you'll be kicking yourself.

These units are new, but may have some minor surface marks due to the fact that many of them have been used as display models on store shelves. None of them are customer returns or refurbs. They carry a one year manufacturers warranty. They are also in their original packaging, with all original accessories and manuals.

These units can sometimes be found for sale for upwards of $500.00 each, Jovation sells a nearly identical unit for $412.00.

Out of box they will scan cordless phones and with minor adjustments, they will fully scan all cellular frequencies. I found these units when I went on a search to find one for myself, and found a store with a large, forgotten supply in their inventory. I bought them all and I am passing this deal onto you.

Selling price is $149.99, which includes shipping to your door.

Email me at: rmcnaughton@ees.eesc.com

Email me with any questions, and/or your phone number, and I will give you a call. I expect to sell all of my supply within the next 48hours, so act fast.

Source record: 144381

Funny, the RS web site has this info for this scanner......are you sure you've got the same model?

PRO-26 Pocket Scanner, FM Monitor/Scanner
(200-0107) Operation Faxback Doc. # 48527

After batteries, crystal(s) and antenna (telescopic or flexible) have been installed, your PRO-26 is ready to use.

Turn power on by turning VOLume to the right. Turn SQuelch to the minimum position to the far left. Set all the channel lock-out switches in the up position, toward the LED indicators. You should hear a rushing sound from the speaker.

Turn SQuelch to the right until the background noise abruptly stops. You cannot adjust SQuelch properly while listening to a station, so wait until signals cease. If you set SQuelch correctly, the PRO-26 will appear 'dead' until a signal comes in; when a signal comes in, the squelch circuit will 'open up' and you'll hear the signal. When the signal ceases, the squelch circuit will 'close' and cut out all sound until the next signal comes in.

If you want the PRO-26 to scan the channels continuously for the crystals you have installed, adjust SQuelch as previously instructed, then set the SCAN/MANUAL switch to the SCAN position. The PRO-26 will constantly scan each channel, in sequence; when a signal appears on one of the channels, the receiver will lock onto that channel and you will hear the signal.

If you do not want automatic scanning on one or more channels, press the appropriate Channel Lock-Out Switch(es) down, or away from the LED indicator.

If you want to stay tuned to one channel only, set the SCAN/MANUAL switch to the MANUAL position (stop scanning) and press MANUAL momentarily to advance to the channel you want to listen to (as indicated by the LED above that channel switch). For manual scanning, the receiver can be either 'squelched' (adjusted as previously indicated) or 'unsquelched' (the SQuelch control set to the extreme left). For automatic scanning, SQuelch must be set to eliminate the background noise.

MAXIMUM SENSITIVITY RANGE

This Receiver will function adequately from 30 to 50, 144 to 174 and 450 to 512 MHz, but with reduced sensitivity at the upper and lower extremes. For maximum sensitivity on the VHF-Lo band, the channel frequencies you choose should be within +/- 3 MHz of 40 MHz (that is, in the spread of 37 to 43 MHz). For the VHF Hi band, stay within +/- 4 MHz of 153 MHz (149 to

157 MHz) and for UHF, +/- 15 MHz of 465 MHz (that is, 450 to 480 MHz). The superior reception spread of 6, 8, or 30 MHz (+/- 3, +/- 4 or +/- 15 MHz) can be moved up or down in either band of frequencies by special realignment of the front end circuitry of this Receiver (which should be attempted only by qualified Electronic Service Technicians who have adequately calibrated, precision test equipment.)

SORRY, here is the correct spec sheet for the pro 26 200 channel scanner......apologies, looks like a great scanner, might be a good addition to my BC235XLT

PRO-26 Portable 200-Channel Scanner
(200-0506) Features Faxback Doc. # 17719

Your Radio Shack PRO-26 Portable 200-Channel Scanner lets you in on all the action! This scanner gives you direct access to over 76,000 exciting frequencies used by police and fire departments, ambulance and transportation services, amateur radio, aircraft communications, Citizen's Band, and commercial FM and television broadcasts. You can select up to 200 channels for your scanner to scan.

The secret to your scanner's ability to scan so many frequencies is its custom-designed microprocessor-a tiny, built-in computer.

Your scanner also has these features:

Continuous Coverage - receives from 25 MHz to 1.3 GHz (excluding cellular service frequencies).

HyperScan - scans through programmed channels at 50 channels per second.

Ten Channel-Storage Banks - let you store 20 channels in each of 10 banks to group frequencies so you can easily identify calls.

Monitor Memories - let you store up to 10 frequencies you locate during a frequency search which you can then transfer into channels.

Limit Search - lets you search for transmissions within a set range.

Direct Search - lets you search from the current frequency.

Search Skip - lets you select up to 50 frequencies for the scanner to skip during a search, so you can avoid frequencies you have already discovered.

Auto Sort - lets you scan the stored channels in order from lowest to highest frequency to increase scanning speed.

HyperSearch - lets you set the scanner to search at 300 steps/second (in 5 kHz steps only).

Auto Store - quickly fines and automatically stores active
frequencies into the selected banks (does not
store the frequency if it is already stored in
another channel).

2- or 4-Second Scan Delay - delays scanning for 2 or 4 seconds before
moving to another channel, so you can hear more
replies.

Data Skip - skips nonmodulated signals or data signals
during a limit or direct search.

Lock-Out function - prevents channels you select from being
scanned.

Priority Channel - checks a specified channel every 2 seconds so
you do not miss important calls.

Automatic Modulation Mode - selects the modulation method--narrow-band
frequency modulation (NFM), wide-band frequency
modulation (WFM), or amplitude modulation (AM)-
-most often used for each band, and lets you
manually override the preset mode (see
"Changing the Modulation Mode").

Selectable Frequency Step - lets you select the frequency step during a
limit or direct search.

Weather Band Key - scans the preprogrammed weather frequencies to
keep you informed of the most current weather
conditions.

Attenuator - adjust the scanner's sensitivity to help
eliminate interference from strong, nearby
transmitters.

Low Battery Indicator - warns you when battery power gets low.

Memory Backup - keeps the channel frequencies stored in memory
for up to 3 days during a power loss.

Optional Power Sources - let you power your scanner from alkaline
batteries, rechargeable batteries, or AC or DC
power, and even recharge rechargeable batteries
in the scanner.

Your scanner can receive all of these bands:

Default Frequency
Range Mode Step

25.0000 - 28.9950 MHz AM 5.0 kHz
29.0000 - 53.9950 MHz NFM 5.0 kHz
59.7500 - 71.7500 MHz WFM 6.0 MHz
72.0000 - 75.9950 MHz NFM 5.0 kHz

81.7500 - 87.7500 MHz WFM 6.0 MHz
88.1000 - 107.9000 MHz WFM 200.0 kHz
108.0000 - 136.9875 MHz AM 12.5 kHz
137.0000 - 173.9950 MHz NFM 5.0 kHz
179.7500 - 215.7500 MHz WFM 6.0 MHz
216.0000 - 224.9950 MHz NFM 5.0 kHz
225.0000 - 399.9875 MHz AM 12.5 kHz
400.0000 - 511.9875 MHz NFM 12.5 kHz
517.7500 - 805.7500 MHz WFM 6.0 MHz
806.0000 - 823.9375 MHz NFM 12.5 kHz
851.0000 - 868.9375 MHz NFM 12.5 kHz
896.1125 - 1300.0000 MHz NFM 12.5 kHz

The following Weather Service channels are preprogrammed into your scanner.

162.4000 MHz (NFM)
162.4250 MHz (NFM)
162.4500 MHz (NFM)
162.4750 MHz (NFM)
162.5000 MHz (NFM)
162.5250 MHz (NFM)
162.5500 MHz (NFM)

FCC NOTICE

Your scanner might cause radio or TV interference even when it is operating properly. To determine if your scanner is causing the interference, turn off your scanner. If the interference goes away, your scanner was causing it. Try to eliminate the interference by:

Moving your scanner away from the receiver

Connecting your scanner to an outlet that is on a different electrical circuit from the receiver

Contacting your local Radio Shack store for help

If you cannot eliminate the interference, the FCC requires that you stop using your scanner.

NOTE: Mobile use of this scanner is unlawful or requires a permit in some areas. Check the laws in your area.

This device complies with Part 15 of FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Being that I own a BC800XLT with 800MHz cellular range capabilities
but with only the ability to tune in 12.5KHz steps within that range,
what is it that I'm missing should I care to experiment in listening
to those cellular frequencies?

Thanks!

Charles

Source record: 144393

Martin:

What is your source of information regarding the Icom PCR-1000? Have you actually owned one yourself, or are you judging it from comments made from other individuals?

I own one, it is made extremely well, it has been 100% reliable, and Icom supports it's own software, (included with the radio) very well, in my experience.

I do find it interesting, in past flame wars regarding the Icom, vs. the WinRadio, that the major claim to fame, for WinRadio, was that it was an internal device, and Icom took a lot of heat, again for some unfounded claims, for being an external device. Now, WinRadio is following closely in Icom's footsteps, and introducing external devices.

Source record: 144394

John:

Even though most communications equipment is designed for an antenna impedance of 50 ohm, it seems that the inexpensive, 75 ohm cable for television, suffers less loss, especially at higher frequencies! Granted there are high grade, and high cost, 50 ohm cables for high frequency use, but it is also very rigid, and hard to work with.

Bill Crocker

I've got the Radio Shack frequency counter and now an
Optoelectronics Scout. I haven't even thought about the
RS one since it came. Heck, I'll sell it to you for $50.00.
It's in a much lower class than the Scout. Just put it in
viabrate capture mode and walk around (like in a mall or
where ever...). It grabs all sorts of stuff. I love it!

Could anyone tell me if there are any bands trunked in New York City, for example police, fire, etc. I've heard some other people say that their cities have gone trunked and now they can't listen to alot of stuff. If a city goes trunked what is affected and what are the things left to listen to if you don't have a trunk scanner?

5568. Radio Shack pulse charger: OEM version?

Newsgroup: rec.radio.scanner
Date: 1998-09-10 00:00:00 UTC

Cross-posted to: sci.chem.electrochem.battery,rec.photo.digital,rec.radio.scanner,alt.radio.scanner

Those following the postings about Radio Shack's new NiCD/NiMH "pulse charger" (#23-410) may remember a posting from someone who opened it up and confirmed that the circuit boards all bore the Saitek name (makers of the "Ecco" charger).

Well, the OEM version - or a variety thereof - may be out. Check out

http://www.lifestylefascination.com/cgi/display.cgi?item_num=isc878a_file=/inventory/images/isc878.jpg

(Should this URL fail just go to the product section and look under ELECTRONICS in the second set of 21 products).

Note that the blurb says this one does alkalines too. It obviously uses the same case and display as the Radio Shack version, but I wonder about what's inside.

>From: nospam@nospam.com

There are certain agencies in the NYC Metro area that have trunked radio systems; however.....NYPD and FDNY remain conventional systems. The city has what they call their DOITT system, on there you will hear OEM, Taxi & Limo Commission, Buildings Dept, and other public works type operations.

5570. What are advantages of base scanners

Newsgroup: rec.radio.scanner

I just picked up RS's new Pro-74 "Race Scanner". It's a nice little scanner overall and its on sale at the moment. The best feature about it for race fans is that it allows you to program in multiple frequencies for each team and it will display the team number when you get a hit on a frequency you have programed. So you can program say 4 frequencies for car number three and then whenever any of those frequencies get a hit it will tell you the team number instead of its memory location. BTW, it also includes the stubby antenna. If you have any questions about this scanner just give me a yell.

Jay

Yeah. I'm with you on this one Rich. Not that I don't respect what WinRadio has to offer, but for my money the only one that raises my blood pressure is the WR-3100e, external for laptops. But for real money (under the 2 grand asking price) I'll take the PCR1000 any time. I have had mine for a couple of weeks and am thrilled at the performance. I was told to expect to be under whelmed, but I have found just the opposite to even some of the issues you found with your test of it. First of all it runs downright cool, barely warm to the touch after an hour of operation. The only time it stopped scanning was because of an incorrect setting on one of the tabs for scanning procedure. The sensitivity is nothing short of amazing (I compared with my AOR8000) and the audio is wonderful. Downright surprising though was the fact that I had a question the day I got it and waited only 5 minutes to talk to a technician, who by the way was downright fun to talk to and he even laughed as we talked about the hobby in general. I was pleasantly surprised by this and up till now am thoroughly satisfied. Thanks.

5575. Re: WinRadio WR-3100e, to buy or not HELP

First of all, I applaud both Icom and WinRadio for their further designs of "outboard" units. Especially the fact that WinRadio has woken up to the fact that some of us like laptops and PCMCIA slots are a natural. Not to mention the lessening of internally generated noise from the computer. As an owner of an Icom PCR-1000 and having checked out some of WinRadio's products, my personal opinion is that unless you want absolute "State Of The Are" and are prepared to pay the $2,000.00 for the model WR-3100 I or E version, you might just as well get the Icom.

In article <35f7e0da.928243@news.fastlink.com.au>,
barryo@XfastlinkX.com.au says...

>
> In the USA it is illegal to be in possesion of a transmitter for
> which you do not have a current license. Don't believe me? Check
> with the FCC.
>
> Barry

Please cite appropriate statutes. That you make it illegal for my wife
to go out and buy me a new FT1000D. I don't think so

It is not illegal to be in possession of which you speak. I had ham
gear 3 years before I was originally licensed. It's illegal only if you
USE said equipment.

It is not illegal to monitor police frequencies, unless you use that
information in the interference of offical business. IE: I overhear on
my scanner that the DEA is about to raid the O'Grady house in 5 minutes
and all units standby. I then phone the O'Grady house and tell Barry,
"Hey dude, the fuzz is about to bust your butt, ditch the drugs" Barry
does so and it is found that I tipped him off. I would be up the
proverbial creek for that.

WRONG!

First, I don't have the power to "get someone kicked off their ISP"
(Only the ISP has that authority).
Second, it is very sad that someone's actions were so bad that it causes
their ISP to revoke their access.

> The newsgroup is un-moderated and will
> take care of itself, if you will just let it.

The problems went un-controlled for nearly 3 years untill myself & a few
others took actions. Your logic is seriously flawed.

You won't harm the scanner, but there will be a slight decline in
performance compared to using 50 ohm coax.

> Also, what's the best coax for
> a scanners lead-in???

The best coax to use is RG-213 & it is UV resistant.

The 1998 Southern California Detail Edition of Police Call contains a
listing for Burbank Neighborhood Watch operatorin on 155.385 Mhz,
but does not show any other information, such as a callsign for BNW.

FCC Rules Part 90.27 is the Emergency Medical Radio Service (EMRS)
The eligibility for EMRS is for the delivery or rendition of emergency
medical services for the provision of basic or advanced life support, ect.

The frequency of 155.385Mhz is regulated by the EMRS rules.

How did a neighborhood watch organization obtain a EMRS frequency?

Can anyone in or near Burbank monitor 155.385 MHz for radio traffic,
and report who is on 155.385 MHz?

Also, could somebody please provide additional formation, such as a
callsign, for BNW. The FCC Databases and other frequency directories
do not contain any information about Burbank Neighborhood Watch.

Thank you and sincerely yours:

David Jackson

Most books I've seen are pretty clear about unlicensed people & access
to YOUR equipment..not their own personal gear! Anyone in the USA can
walk into RS and get a HTX-202/404 and carry it around quite legally!

>but have little knowledge of depth.

So where is all YOUR knowledge, Mackey ? I haven`t seen you answer a single question on this news group for anyone. Some of these questions are quite straightforward, but you don`t answer. How about the guy that had computer interference on his scanner ? I didn`t see YOU responding to that inquiry, which is information any NOVICE would know ! You wanna be the new guru ? Then you better learn the basics of radio, and give them the answers they need ! I have seen thousands of post slip by you that you could have replied to, over the last three years, if you had even the most basic understanding of ANYTHING about radio theory or practice ! I am not talking here about "scanner" stuff. But you don`t ! That last sentence of yours describes you to a "T".....
Don`t hang around day after day and say "I know more than you", and leave it at that. YOU HAVE TO PROVE IT. So , Mr "guru", GET TO WORK.

5597. BC235XLT - Solar Solution

Newsgroup: rec.radio.scanner
Date: 1998-09-10 00:00:00 UTC
From: catz@netrox.net
Message-ID: <35fe5b03.26908674@news.netrox.net>
Source record: 144489

One of the main reasons I purchased my scanner was to be able to monitor local emergency and police channels in an emergency. One of the main difficulties in doing this for any extended period is the use of proprietary nicad battery packs in this unit. If the power goes, there isn't an easy or inexpensive way to charge up these units or run 'em....especially if your not near a car battery.

I had delivered today from C Crane company, a "rat pack". It uses standard AA batts (10 of 'em). Couple that with a few solar battery chargers (available from them, too) and you have a nice, inexpensive way to power this (and other types of similar units) up during emergencies.

They will custom build you this rat pack for 12 bucks! The batt chargers are only 15 bucks. A nice simple inexpensive solution for keeping your scanner, cb or shortwave up and running during extended power failures.

Thought I would pass this on to those who might be looking to do the same. Hope this helps someone...I've been looking for this solution since I got the radio a month ago.

PS. I'm not affiliated with 'em...just a satisfied customer!

Radio Shack sells a Mono To Stereo adapter for a couple of bucks which work great. I would suggest that if you have nothing programmed in the scanner now, that you put the frequencies being the same as the channel number on the scanner as the car. It makes it A LOT easier when trying to figure out which driver and crew you are listenning to.

From: Gunner <iam@home.now>
Message-ID: <35F7DC3A.468B@home.now>
Source record: 144493

If you have a local Scanner dealer and Ham Radio outlet, see if they have something with local listings. I go up to a place in Concord California that has a great selection of books with Frequencies for the San Francisco Bay Area at a good price. The way that they put the books together makes it real easy to find most of what I'm looking for.

5602. Re: CHP freq.

Newsgroup: rec.radio.scanner
Date: 1998-09-10 00:00:00 UTC
From: Gunner <iam@home.now>
Message-ID: <35F7DDC9.46C6@home.now>
Source record: 144494

The advantage is if a CHP officer should leave their mike open for some reason, Dispatch can still continue to broadcast out to the other units. It also makes it harder for "the bad guy" to keep up with what is going on.

5603. Orange County Calif. Cabs

Newsgroup: rec.radio.scanner
Date: 1998-09-10 00:00:00 UTC
From: "Stanley M. Kelton" <stanleymkelton@worldnet.att.net>

Source record: 144495

I hear Orange County, California cabs being dispatched on 452.3000.
However, I never clearly hear the cabs answering, i.e. sometimes if the
dispatcher leaves his mike open long enough I can barely hear the cabs
answering on some type of talk back setup. I thought there was supposed
to be some kind of offset, but I have been unable to find it.

E-mail welcome.

TIA.

Stan Kelton

Maybe the reason it crashed is because it is not fully functional yet!!!
Thats why they do testing before it is turned over to the user. Don't
start bashing a system or a vendor until you know the facts. you are
probably one of those guys tht is P.O.ed because you won't be able to
listen in the future without a trunk tracker.

John it must make you feel like you have such power to get someone kicked off their ISP. Is that why you "stir the pot" ??? So you can complain to everyone's ISP after you've agitated them ???

Really, I want to know, why do you feel that you must play net cop and saviour to the newsgroups??? Why do you feel it is your responsibility to "clean-up the newsgroups" ??? The newsgroup is un-moderated and will take care of itself, if you will just let it.

John, I am not flamming you, I really would like to know the answers to these questions.

Tony,

Is this a new model or is it just the ICF-SC1 with a PC interface?

My only skepticism with mixing PCs and radios is that PCs generate a heck of a lot of rf noise. Granted is very low level, but when your scanner is near or 'in' the PC it's got to create a lot of false signals and in HR receivers it generally raises the background noise.

Some people swear by these PC based radios. Me? I turn my PCs off when I want to do some serious scanning or SWLing.

Alf

David;

Suggest you get a new copy of the FCC Rule book. Section 90.27 does not
exist anymore. It has been replaced by a consolidated Public Safety Pool
titled 90.20 by the refarming docket.

BTW, Don't think these guys are legal. See this URL

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/freq_st_res.hts?db_id=2&rows=500&state=CA&freq=00000155.38500000

:
:> I'm looking for information on a 2 way radio system that I can get at
:> least a 10 mile range . Something similar to CB , but more privacy , and
:> no repeater fees . Can I find anything in the 30 - 50 mhz range that
:> will do the trick ? Or another frequency ? Any info is appreciated !
:
:You didn't indicate whether this communication would be personal or
:business related. For instance, personal communication only could be
:handled nicely with ham radio. You could get the easy-to-pass Technician
:license (no Morse code required) and easily talk 10 miles on the 2 meter
:band. Some ham clubs have repeaters as well, priced at just a fraction of
:what commercial repeaters charge.

All repeaters on amature bands can be used by all amatures at no cost.

:Is there a lack of privacy on CB bands in your area?

There is a total lack of privacy on CB in all areas.

:You might also
:consider a CB radio with upper and lower sideband. In my area, side band
:is almost completely empty, while the AM channels receive lots of
:activity. You might ask a friend or dealer to determine whether that
:would be feasible. As long as the terrain is level and good antennas are
:used, a CB on side band would be satisfactory.

Only in your imagination is CB radio private.

:10 meter ham radio is also possible, but requires you to pass a Morse code
:test of 5 words per minute. However, the FCC is examining this currently,
:and there is a move afoot to eliminate all Morse code. Lets see if it is
:successful.

Most modern radios have 0 meters with functions formaly provided by
meters being taken over by the LCD display.

:Most business two way systems use repeaters in this area, although some
:permits are granted for direct communications in the 450 mhz range.
:However, even this type of transmission isn't scrambled, so I don't know
:how much privacy you need. Actually, your most secure (private) system
:would be a business band trunking repeater, since most of that radio
:traffic is incredibly boring to listen in to by scanner folks.

He could use a scrambler or digital mobile phone.

:Furthermore, each time you or your partner stop talking, you move to a
:different spot in the "trunk" so following the entire conversation would
:be difficult (not impossible, however)

Not all trunked systems work that way. Some systems pause after each
over and will stay on the same channel if the other user replys
during the pause time. Some other trunking systems stay on the same
channel until released by the originator.

Poor construction? I think not. It's built like a brick. Hard to
build a metal enclosure poorly...especially coming from iCOM.

> low reliability

Low? I don't get that either. Some of us have problems getting
it to run on certain versions of Win95. Some have reported a
bug that mysteriously stops scanning. But to claim "low
reliability" I think I would have seen it if droves of them
were being returned due to failures.

You want to point out problems that's fine and what I
attempted to do above. You want to talk about poor support
from iCOM that's fine too...they seemed to have pissed
off about half of their buyers :-)

Low reliability, I don't see that at all.

> and non-existent software support.

Not true. I believe the PCR1000 has more, or at least equal
support from the third party vendors than does the WinRADiO
and it's been out a year longer.

While iCOM has been lame to fix problems and refuses to
release the protocol, there is much support for it from the
hobbyists and popular scanner software vendors.

With the release of more models, I think more vendors will
be tempted to support WinRADiO receivers since it appears
they are a more "serious" player in the market. Time will
tell.

I'm interested in how the 1000e/1500e will do against the
PCR1000. For now, I'll pick the PCR1000 over the 1000i any
day of the week. But that's just me...;-)

Your receiver/scanner will not be affected by the use of 75 ohm cable.
The impedance of the antenna and coax that the receiver sees constantly
changes as you tune different frequencies. In short, don't sweat it.

```
Hello

Im sending this email to give you the latest information on
AirNav, the Aircraft Tracking Software.

It is already possible to download more AirNav Maps from AirNav
homepage.

AirNav Maps:
The collection now includes more than 30 maps for many parts of
the world.
New additions were made including many maps for USA, Canada and
Europe.
To install these maps just download and unzip them. That's all.

If you want to get more information on this just go to AirNav
homepage at

http://fly.to/airnav and follow Data Files Link.

In the homepage, it's also possible to download the latest full
version of the program and register it Online. You will receive your
unlock codes within 12 hours.
Hope this info is of your interest.

Best regards, Andre Brandao

Please do not forget to remove .NOSPAM when replying !!

=-=-=-=-=-=-=- Listing for Amateur + CB + Scanner =-=-=-=-=-=-=-

Amateur Mobile:

HTX-242 Mobile Radio
- 136-174 MHz VHF 45W 2m receiver. Extend TX by
buttons.
- Purchased: March 1997
- Warranty: ~1.5 years RS extended warranty
- Asking: $160 CDN or $100 US + shipping(radio shack
price $399.99 CDN + tax). It's about 65-70% off the regular
purchase price (if you include the tax as well)
- Box + Manual + Proof of Purchase
- Note: This radio is cigarette lighter plug ready.
You do not need to attach a cigarette lighter plug. It's already
there. Working perfect. Low usage to now.

Power Supply (Techcessories)
- 6A max Power Supply. Works perfect for HTX-242
mobile. Want to use for HTX-202 ? I will give you a plug free !!*
- Purchased: March 1997
- Warranty:~1.5 years RS extended warranty
- Asking: $40 CDN (radio shack price 99.99 CDN + tax)
or $25 US + shipping
- One output and one cigarette lighter plug output
- Box + Manual + Proof of Purchase

RS Mobile Antenna
- Purchased: a year ago. i have two.
- Warranty: no
- Asking: $5 CDN (Original Price well exceeded $60
CDN)

All* of this [amateur gears] for... $200 CDN or $130 US FUNDS
I prefer sell all of these at once. Need an extra mobile
rig or start ham radio and looking for one ? This is a good
opportunity for you to add an extra rig !! 1st come (payment), 1st
serve.

==========
Amateur Portable:

HTX-202 SOLD at $99 CDN. No Longer Available !!
Thank you for your correspondance.

CBs:
TRC-484
- 40CH AM Mobile.
- Purchased: April 1997
- Warranty:~1.5 years RS extended warranty
- Asking: $60 CDN or $40 US (radio shack price $139.99
CDN + tax)
- Cigarette plug alREADY !!!!!
- Portable CB ANTENNA comes with this !!!!!
- Power can be modified up to ~8-15W (it is illegal.
do this at your own risk)
- Box + Manual + Proof of Purchase

TRC-485 looking for SSB CB for low cost ?
- 40CH AM, 80CH SSB
- Purchased: December 1997
- Warranty: 6 months RS warranty
- Asking: $130 CDN or $90 US (radio shack price
$299.99 CDN + tax)
- Cigarette plug alREADY !!!!!
- Mobile cellular look like ANTENNA comes with this
!!!!!
- Power can be modified up to ~8-15W (it is illegal.
do this at your own risk)
- Box + Manual + Proof of Purchase

I will try to attach antenna for all the CB rigs free.

Scanners:

Pro-28 Portable Scanner
- General VHF and UHF scanner
- Purchased: August 1997
- Asking: $59 CDN or $39 US (radio shack price $129.99
CDN + tax)
- Rechargeble Alkaline Batteries or Ni-Cads included.

- Box + Manual + Proof of Purchase

Accesories:

Micronta SWR/POWER Tester
- SWR/POWER Tester for HF
- Purchased in 1997
- $25 CDN or $15 US (radioshack price $44.99 CDN +
tax)
- ~2.5 years instant exchange extended warranty (i.e.
you buy this and if there is a problem, you can exchange it anyway...
although working perfect at this time)
- Manual + Proof of Purchase

=-

1st come, 1st serve.

Why selling: I am trying to clear up my stations... I am very busy
nowadays and do not have time for ham or CB...

ALL PRICES ARE NEGOTIABLE !!!!!!

Enjoy !!

>Not hard to find. Radio Shack sells guides listing the frequencies and
>often will have a free photocopied list of local police frequencies.

Yes, but those guides don't list the input frequency, or the CTCSS tones,
which are both required for almost all police systems (using repeaters).

>Many ham radios can easily be modifed to xmit on these bands. Instructions
>are available on the internet, and may involve minor soldering or just
>cutting a wire on some older radios. Radio price ranges $200-800 new,
>less used.

My Yaesu FT-470 requires no internal work.

>I don't think it's illegal. Citations of relevant laws to the contrary
>would be appreciated. However, even if it is legal, you can be
>harrassed, prosecuted, and/or have to spend thousands on legal fees even
>if you are "right." You can also lose in court even if you're right.
>Big money and connections often speak louder than the law in court.

It probably isn't illegal to transmit, as long as it is a dire emergency,
and no other form of communication is available.

>I think it's also (excluding emergencies) illegal to use a modified
>radio to transmit on police (or anything but ham frequencies) freqencies
>even if you are licensed to transmit on those frequencies. The FCC
>generally requires some form of approval of the radio for the specific
>frequency used.

In an emergency situation, (from 97.40x) any amateur station may do
basically anything.

Not entirely correct (although, you are correct somehwat) -- an unlicensed person is not allowed to be a control operator, and many books state that unlicensed people should not have access to a radio (ie, it should be locked up, disabled, etc).

I will second that !!! Free cable from the cable guy is a nice way to go. I have been using 75 ohm cable (RG6 & RG11) for a long time and found that it works quite well. IMHO RG6 beats RG8 hands down for scanners. I seem to quite a bit more with RG6 especially in the 800mhz & 900mhz bands.

Just my 2 cents...

Mike

I have a question about this also. I have the OPC-478 and it plugs right into my Serial port A. But the programs I have Downloaded from the net all have Com port ?, not serial port ?. I'm still waiting for my CS R10 software to come in. Will it have "Serial Port" or am I screwed on the whole thing? Any help on hooking this radio to my puter would be greatly appriciated.

Except for Marine band & the now almost totally defunct mobile
telephone band there is no standard offset on VHF. 154.515 is in
neither of those services. The offset could be nearly anything.

WRONG!

There were problems with Bill on this NG LONG before I arrived here! Do
you want me to make some re-posts from dejanews of the complaints &
problems people had with Bill back then?

> It is YOU that
> carried on with it for three years !

Another lie, I have only been on this NG for 2 years!

Yet another lie! YOU are the one who keeps posting about Bill &
starting
new threads! Bill left this NG nearly a month ago when his ISP kicked
him off for abuse yet YOU keep posting messages to rally support to
appeal the decision of his ISP! YOU are the one keeps repeated posting
about
Bill. You even admitted you started this thread of "Bill Cheek can use
your
help now"!!!!!!

Other than the taxi service and mobile phones, it's catch-as-catch-can.
For a specific repeater, the input could be anywhere within the allocation
for that service (and local governments occasionaly ignore the distinctions
of police/fire/govt assignments on their licenses).

From the FAF - Frequently Asked Frequencies

You need to take it to a Motorola dealer. Look in your yellow pages under radios. You can not do this yourself, unless you want to spend big $$$$$$ on software, cables, and a radio interface box. Your best be is to take it to a dealer.

Hi again,

I've noticed something over some time.. over the 10 years I've been listening to scanners (I had forgotten some of the repeater pairs as I've been out of radio for some time, and asked about these in my last post.. thanks to everyone who helped).. Back in the 80's there was heavy useage of the 152 MHz and 454 MHz mobile phone frequencies. What exactly were/are these frequencies used for. Now all I hear is an occasional pager transmission in there, but no more phones. In fact, in just the last 4 or 5 years the useage of the 454 MHz telephone maintenance interconnects have gone completely. I imagine that whoever was using these frequencies is now the proud owner of a cellphone (or PCS phone). Someone please enlighten me on the enigma of these frequencies.

If you where able get a radio to transmitt on the Police frequency you still would have to get the right CTCSS or DPL for that department, and if the department has repeaters then you need both frequencys to be able to talk and listen to then. Tranmiting on the police frequency is a VERY BIG DEAL so if you do and your not autherized to do so like EMERGENCY SERVICES PERSONAL, then be prepared to defend yourself. Also the haveing a radio that is illegaly modified to transmitt out of HAM band is ILLEGAL to have unless your part of MARS and CAP.

R E A L I T Y C H E C K

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched
the archives at Dejanews to see how much John "contributes" to the
group. I found some 13000 posts in all in the scanner newsgroups since
he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has
made can be counted on one hand, with room left over. Case closed,
folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have
proven what the Clown Prince of Scanning is really all about: A
personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey
pertained to scanners or scanning. Approximately half of the posts

made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

5680. Re: COAX**50or75 ohm

Newsgroup: rec.radio.scanner
Date: 1998-09-11 00:00:00 UTC

Message-ID: <35F9C5CB.CA274831@MCIONE.net>
Source record: 144360

From personal experience I have learned the 75 ohm RG6 is better than 50 ohm RG8 for listening to high frequencies (ie. 450, 800 & 900mhz).

I just repalced a 50 foot run of RG8 in good shape with RG6 and am hearing things on 800 & 900 mhz that I was not hearing before. The impedence mismatch is by far out weiighed by the inprovement in reception.

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched
the archives at Dejanews to see how much John "contributes" to the
group. I found some 13000 posts in all in the scanner newsgroups since
he arrived. THIRTEEN THOUSAND!!!!!!!!!!!! Yet the on topic posts he has
made can be counted on one hand, with room left over. Case closed,
folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have
proven what the Clown Prince of Scanning is really all about: A
personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0

Your improvement in reception was caused by replacing old RG-8
coax. Old RG-8 coax becomes very lossy after a few years of being
exposed to UV & that loss is mostly noticed at 800/900 MHz. You would
have noticed the same improvement if you replaced with NEW RG-8,
until the UV effect had aged the coax.

>Are there any advantages to base scanners?...

More audio output.
Larger display is easier to see at a distance.
Larger keypad is easier to use without pressing two keys at
the same time.
Can use keypad without knocking over the scanner.
Don't have to worry about battery management.
Usually have more room inside the cabinet to add circuitry, jacks,
and controls.

>to those cellular frequencies?

Since it tunes in 12.5 kHz steps, two steps would be 25 kHz, which is just 5 kHz away from 30 kHz, so you're not missing much when the frequency received is 5 kHz away. Get a spreadsheet and load in the cellular frequencies in one column, alternating rows, then load in your starting freqency and do an Auto Fill of 12.5. You'll see where your frequencies are exactly on, pretty close or fairly far off. The first two of those will mean no difference, but you'll be missing at least a few channels. That is, if you were really to listen to cellular calls. Which you can't do. You can plug in the frequencies for experimentation, but you can't eavesdrop on the calls.

Whew! Glad I mentioned that!

It lets you upload and download massive frequency lists without having to punch them in by hand. You can also do search & store and spectrum analysis, logging and usage statistics, and probably lots of other stuff.

The advantages are similar to the advantages of my home stereo system over my handheld camping radio, my TV over my friend's handheld 2" screen TV etc.
The main advantage to anything handheld is that they are small, can be easily stored, and you can take them virtually anywhere.

Bud,

While it is true that some Blue Angels and Thunderbirds frequencies are in
the 225-400MHz range, many others are in the 138-150MHz range, also in AM mode.
When you buy a scanner make certain that it has user selectable receive modes.
There are no new scanners with the 225-400 range that sell for $200 or
less, but there are a number of used radios that are in your price range. The
Pro-26 has already been mentioned, and it is a good choice. So are the Pro-43
and Pro-60. All three of these units were sold by RadioShack, and all are now
discontinued.
If you are interested in military monitoring then you should join Milcom,
the e-mail listserver dedicated to military monitoring.

To join MilCom,:

Send an e-mail message to: majordomo@qth.net
In the subject put: milcom
In the text area put: subscribe milcom

That's all there is to it. You should start receiving messages within a few
hours.
To post a message to the list members address it to milcom@qth.net
We have members all over the country, in Europe and Japan.
For help finding frequencies in your area just post a message stating your
location
and requesting frequency help and you should get some answers.

John Ward

> build one, or is that way too complex a piece of equipment?

Hello,
I wouldn't waste money on the CT-17 interface unless I had a few icom radios to control. There are two ways to connect your R-10 to your computer which are very easy. First off, if you own the OPC-478 already, there is a simple modification to the cable which will let you bypass the need for a CT-17. Second, if you don't have that cable, you can go to radio shack and purchase a 1488 and 1489 (quad line driver/receiver) along with a few other inexpensive parts and build a very simple interface for under $15 which I currently use. There is another mod out there which is listed in the ARRL Handbook which I plan on getting sometime soon.

I have read also that the cloning cable is nothing more than a stereo wire with 1/8" male (headphone-like) plugs at each end.

Here's the place to find these mods and all you're looking for concerning the R-10: http://www.xs4all.nl/~jstuyven/r10/

-Michael

Actually, I caught someone talking about the "Sportys aviation
scanner" or something like that like 20ch with 100-400mhz coverage for
like $150. I don't know a lot about it, but I'm sure someone here has
a url! Sounds good, I might have to get one.

CB Rambo sez: "HAW HAW HAW!"

Actually, though, I always get the final post. It's "Still waiting to hear from your lawyer, OYE BOY!" Followed by dead silence from the other party. Then, as you have observed, the conversation is resurrected approximately six months later.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Bud,

Thanks for the tip. I had, and I did again, try the 5 MHz offset, as
well as scanning that area, but no cigar.

I think you are right about it having something to do with the way it is
set up. The dispatcher sometimes barks at the cabbies about the order
in which they are responding to his dispatches. I don't quite
understand the set up, but maybe someone else who does will post.

Thank,

Stan Kelton

Okay, okay ... you guy's win. I'm pi**ed off with downloading a hundred or so posts a day that are so off topic that you would need a twisted kind of logic to see where they originally came from. I have subscribed to this group for ages but it's just not worth my time any more. I need help and advice with my radios, not pages and pages of juvenile abuse. I'm quitting my sub and I'll try and find a sensible group. Shame really cos from what I can make out about ninety nine point nine percent of subscribers show a real interest. But as far as I can see, this group has been hijacked by a few individuals with serious personality disorders. Bye all.

>what's inside.

I am planning to order a pulse charger today (Fri 9/11) from MCM
Electronics. Sorry, I haven't been following this thread so I don't
know what the RS model offers. But, the MCM (1-800-543-4330)
charger that does AA and AAA (model 29-1685) is $11.95. The charger
that does AA, AAA, C, and D (model 29-1690) is $13.95. Seems like
a great price. BTW, both chargers work with Ni-Cad and Ni-MH
batteries.

Here is what they say in the MCM sales catalog:

"Battery memory greatly reduces the useful life of Ni-Cad batteries.
A pulse charger breaks battery memory by sending DC pulses into the battery.
Fast charges batteries up to %95 of capacity and automatically switches
to trickle charge. Batteries are automatically discharged before
charging." Also says, "Charges two or four battery sizes".

Thats it. Heck for $14.00 plus shipping - not a bad price I think :)

You will find, that 75 or 50 ohm coaxial cable will both work just
fine for scanners. In fact, often times, you can get 75 ohm cable
for free from your local cable guy.

What is the best cable? Depends, but a good 75 ohm FREE cable
beats just about any cable that you otherwise have to PAY for!

This may be the most astute observation that any of us have made about Mackey's motives for disrupting the newsgroup. That's what it's all about, isn't it? For some reason Mackey views Cheek has a father figure and he has been carrying on in a warped attempt to get attention. You have to believe that--anyone who posts 13,000 off-topic messages really can't be normal. Excellent analysis Dr. Zombie Wolf, excellent indeed!

That's good--thanks for the info.

The Scanning Forum on AOL is absolutely horrible. It's populated by people who want mods to unmodifiable scanners. Another typical question is: "Where can I buy a Radio Shack scanner?"

> downright cool, barely warm to the touch after an hour of operation.

Glad to hear it, and there does seem to be a wide variation in the
run-time temperatures users are seeing on these. I would characterize
mine as quite warm...nowhere near cool.

> The
> only time it stopped scanning was because of an incorrect setting on one
> of the tabs for scanning procedure.

Continue to keep an eye on it if you would. Users are reporting that it
just stops asynchronously after 2 - 20 minutes of scanning just fine.

> The sensitivity is nothing short of
> amazing (I compared with my AOR8000) and the audio is wonderful.

It is rather nice. I enjoy taking it along now that I have a laptop.
As long as I don't have to depend on the iCOM software which refuses
to run with it. ;-)

5723. Avoid low end internal WinRadio - WinRadio WR-3100e, OK

Newsgroup: rec.radio.scanner
Date: 1998-09-11 00:00:00 UTC
From: Victor Healey <fourphun@bellsouth.net>
Message-ID: <%98K1.1107$hE.2526414@news3.atl.bellsouth.net>
Source record: 144443
Cross-posted to: alt.radio.scanner,rec.ham-radio,rec.radio.scanner

I agree Icom IMHO PCR-1000 external PC radio makes a better radio then low end inernal WinRadio when comparing them dollar for dollar, USA support for USA support, and quality for quality. The truly expensive WinRadio WR-3100e sounds like a good deal if you can afford it. This is a good external version. It had better be for that price!

Putting the radio card inside a computer is in the long run a bad idea for a variety of reasons. Noise being a big one. Isa bus is another. All the key technologies going into the computer will be on the PCI bus or newer buses at this time as the computer makers phase out ISA. WinRadio internal is still on the obsolete ISA bus. Buying a WinRadio internal makes as much sense as a person buying an expensive ISA sound card at this time. Even the recent high end and expensive ISA based SB AWE64 Gold can not compare to the quality of the new PCI sound cards.

FYI there has been a major advancement in PC sound which has moved to the PCI bus as predicted. Check out the specs on Creative Labs newest family of sound blaster cards which are now all PCI. The SBLive family of cards $100 to $200 are the ones to look at. The SBLive is a real sleeper at this time but has the potential to become one of this years hottest hardware items for the PC with the introduction of a $100 version. You have got to hear one in action, it is like was when we went from old CGA video to SVGA video! Only a fool would buy the similarly priced Sound Blaster PCI 128 or PCI 64 at this time. BTW I have two -&#65533; three month old PCI 64's for sale ($50 ea. mailto:fourphun@bellsouth.net) if any fools who are short on cash are reading this. The SB 64 will do some true 3-D audio in four speakers and may have some support for EAX in the near future as a software download from creative. I am switching to SBLive in both PCs.

The DSP chip on the SBLive is equivalent to a P-90 coprocessor just for sound. This card can output audio for up to eight different speakers. It can give you full control over multiple audio streams simultaneously (32 3-D audio streams in hardware alone -up to 512 midi instrument voices if devoted to music or any combination of these!). Anyway the potential of this card added to the audio output of radio signals is significant for shaping the signal and extracting information. Electrically this is a very clean low noise card that can supply noise free digital audio out if you need it. In the hands of hobbyists this card has tremendous untapped potential. More on SBLive can be found at http://www.sblive.com/product/benefits.html and http://www.sblive.com/product/faq.html . There is also a new private news server that you can log into now at -&#65533; news.creativelabs.com &#65533;- that discusses speakers, sound and the various generations of sound cards.

From the New Scanner Users FAQ:

Handheld Scanner Antenna Review
Looking to get a few more signals out of your scanner? The antenna is
one of
the most important pieces and yet manufacturers usually provide a
mediocre
performing model that's more for portable convenience than reception.

To help you get the most out of your radio's reception, I wrote a
review on
nearly thirty antennas from many manufacturers. I even evaluated the
stock
units found on most of today's receivers.

5726. Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-09-11 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <35f91314.1893443@news.iaw.on.ca>
Source record: 144446

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.
You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to give it a try, you can download the
program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

It seems Tandy Canada is following its US boss by withdrawing availability of Service Manuals for their scanners from the scanner owners.

Yesterday while I was picking up a Service Manual for a Pro-60, I ordered Service Manuals for the Pro-62 and Pro-64. I listened as the store manager placed the call and was told that these manuals are NOT AVAILABLE. The clerk on the other end said something about copyright problemsï¿½. Yeah right!

I need Service Manuals for the Pro-62 and Pro-64. If anyone has a source of these manuals or others, please let me know.

>"future" up in the dictionary?

A week ago I saw some butt hole posting a load of rubbish.

Starting from that time, we are now a week in the future,
and nothing has changed.

And as we always live in the present, the future will never come,
and presumably I will always see a butt hole posting rubbish.

Source record: 144452

Hi All!

Just bought a RS pro-2021 last night (no manual). Can anyone tell me what the "monitor"
button/function is for and how to go about using it?

Also, are there any mods for this unit, like increased freq coverage in the VHF-LO area
(25-75MHz range) or increased sensitivity in this region?

I saw one mod on the NET about increasing scan speed by changing a 39k resistor to a 15k
resistor, but then saw another report on the same mod that says those resistors go in series!!
Which is it? The thing does scan pretty slow.

Many thanks!

MIKE, (ham radio callsign: ve9aa)

I am selling a pro 37 in very good condition. It has not been modified but can be modified for full cell coverage. It has 200 ch., 800 mhz, delay, light, programmable search, lock out, priority channel, and hyperscan. It will also scan in some of the military range.
Reduced to $125.00

The Sporty's scanner is ok for someone on a really, really tight budget, but experienced scanner users are going to get frustrated. The radio suffers from terrible intermod and there is no channel lock-out. You have to delete an offending frequency from memory and re-program it later. The radio's one saving grace is great audio, and that's important for a scanner meant primarily for use at airshows.

John Ward

5735. pro2021 info found-tnx!MODS still wanted.

wrote:

Bill:

>What is your source of information regarding the Icom PCR-1000? Have you
>actually owned one yourself, or are you judging it from comments made from
>other individuals?

I own both PCR1000 and WR1000. And no, I prefer to make my own
judgments. Let's face it, on the NGs, you can never be sure who posted
the message...

>I own one, it is made extremely well, it has been 100% reliable, and Icom
>supports it's own software, (included with the radio) very well, in my
>experience.

I have had WR1000i for about a year and PCR1000 for nine or so months.
During that time Winradio came out with about six or so good upgrades
(I mean adding new features not just fixing bugs). And yes, Icom has
fixed a few bugs in the meantime, but I can't regard a software
product supported well if, for example, it still can't run on the NT.

>I do find it interesting, in past flame wars regarding the Icom, vs. the
>WinRadio, that the major claim to fame, for WinRadio, was that it was an
>internal device, and Icom took a lot of heat, again for some unfounded
>claims, for being an external device.

If you look carefully at all the "flames", you will find that Winradio
was always on the defensive side. It was supposed to be worse because
it was internal, hence it had to be noisier. (In practice I haven't
experienced much difference between the two in this respect). If you
look at Icom's official advertizing, you will find that they even say
funny things such as their product being "100% external". It was not
Icom who took a lot of heat for being external, but rather Winradio
for being internal.

(BTW, I thought this "100% external" business advertized by Icom
was particularly funny given that it takes much more engineering to
fit the radio inside a PC than into an external box. Winradio must
have seen the funny side of this, because if you look carefully into
the recent issue of Monitoring Times, you will find, to your
amusement, "100% internal" printed alongside their internal cards and
"100% external" with their external boxes!)

> Now, WinRadio is following closely in Icom's footsteps, and introducing
> external devices.

Yes, they are, and I wouldn't be surprised if part of the reason is
that they felt the heat from Icom, but recall that it was not Icom who
invented a radio in a PC-controlled external box. Softwave (does
anyone still remember Softwave?) was the first.

I am looking forward to Icom's first "100% internal" model. It's gonna
be fun!

The interface is only half the equation. It's the software that really "does"
stuff. Take a look at www.scancat.com, www.futurescanning.com,
www.interplaza.com/bensware and several other software related sites to find
out what sorts of features are available.

Well, you already bought Icom, so, understandably, you need to defend your purchase, but since you say that "PCMCIA slots are a natural" and Icom doesn't seem to have one while WiNRADiO does (even on comparable receivers priced much less than $2000), then I remain a little puzzled by your choice....

It depends upon how much you value your investment in batteries, I guess.

NiMH and NiCd cells should NOT be treated the same for proper charging. And if your $14. charger does not monitor the temperature of your NiMH cells, than you might want to look elsewhere for a unit that will give you longer cell life.

When I was a cab driver for 1 day in Pittsburgh, you could not hear the
other cabs radios..only the dispatcher. You have to wait for the dispather
to say that he is finished and is ready to speak to someone else. It can
be a real pain in the neck.

The cheap "pulse chargers" from MCM monitor nothing but the passage of time.

They use a CPU that divides the cycle into discharge, rapid charge,
top-off, and trickle, but does not monitor the voltage or temperature during
the charge process. They choose parameters that would be approximately
correct for most high-capacity AA cells, but they are just approximations.

5744. CTP Speech Inversion Descrambler royalty program

Newsgroup: rec.radio.scanner
Date: 1998-09-11 00:00:00 UTC
From: ctpds49@aol.com
Message-ID: <1998091117163300.NAA25777@ladder03.news.aol.com>
Source record: 144464

Thanks for your interest in the CTP Royalty program.

Here is how it works.

1. You place our banner on your web page. This
will consist of a banner gif Picture of our DS49 Speech Inversion
Descrambler and text advertising it.
Once you place this banner on your
page you are done. There is nothing else to do. You are
given a number that goes after the Descrambler model number
right on the banner.
ie... DS-10. When someone calls us to order
with a credit card or orders through the mail using
your number, you earn a $5.00 royalty for that sale.

2. Royalty checks will be mailed at the end of each quarter.
ie.. end of March/ June/ September/ December.

3. You can email us at any time for an update of your sales.

4. Sales will greatly depend on the amount of traffic your site
gets daily, so increasing your site traffic through search
engine registration and link exchanges will help us both.

5. For each sale where the customer does not remember the model
number, ie... DS-10 we will asign the sale to the next
name on our list of program participants. This way eventualy
you will get credit for a sale even if the customer cant
remember the model number.

That's all there is to it.

If you are interested in participating in the CTP
royalty program, Email us at ctpds49@aol.com
your name and mailing address
and url of your web site and we will send you the banner asap.

Thanks for your time.

Hi,

I used Rich's tutorial to decide on a handheld antenna. I chose the Diamond
RH-77CA. All I can say is that it works great and runs rings around the
stock antenna that came with my AR8000.

Cheers

I found the following message, written by you, as reposted by Joe Nicholson. Obviously you still don't get the picture:

> YES, so have you considered the contribution you would make
> if you simply left? Didn't you get the hint when your previous
> employer Hughes Aircraft terminated you for abusing their internet
> connection?

To begin with, I asked you first. If you leave this NG, the crap will stop. You know it. I know it. Everyone else probably knows it too.

Secondly, my contributions to this NG and scanning in general far outweigh ANYTHING you have said or done for the hobby, period. How many scanner programs have you written, John? How many people have you helped on this NG? How many on topic posts have you made? I am not the only one who will agree that I have you beat on all three. So, my leaving this NG would be no contribution at all. However, your departure would be met with cheers and accolades from 90% of this group.

Feel free to conduct a survey on this NG if you like. Post a message asking everyone who wants you out to reply and say so, and see how big THAT thread gets. Personally, I don't think you've got the stones to post a message like that, so I just might do it for you.

Thirdly, leaving Hughes was MY decision, not theirs, and it had nothing to do with you. My family and I had made the decision to return to Arizona, and shortly after my arrival, I accepted a better, more rewarding and higher paying job, much closer to home than before. Never once was I even approached by ANYONE at Hughes regarding my use of their Internet resources - even if it was against policy, and I certainly was not and would not have been fired for it. Again, my apologies for disappointing you, but Hughes had more important things to do than listen to you snivel.

So I ask you again, bucko. Why haven't you shown yourself the door?

-Phil

I was at my local RadShack the other day, and I noticed that the Magnet-Mount Mobils Scanner Antenna was on clearance for $9.97 !!! This is one-third of its original price of $29.99.

This is good-performing antenna, fair to good construction. Makes a great indoor antenna for a base scanner, too!

Source record: 144471

Hello,

I was wondering if anyone knew of a list of repeater input/output frequencies for the 150 MHz spectrum. I'm curious as to whether there is a fixed offset or if different services have their own in/out freqs. For example, I would like to know the repeater input for the repeater output 154.515 MHz and the repeater input freq for the output of 158.220 MHz. Being that these are two distinct services, is their offset different?

Thanks for any help.

From my FAQ article SCANNER RADIO REVIEW BRIEFS:

[...]

MS200: 1998 vintage. Made in USA. 200 channel mobile with
alpha labels. CTCSS and DCS decoding squelch. Programmable
via PC using supplied software. Low contrast, LCD display.
Keypad backlit for night programming. Rear panel tape audio
jack. Test unit had lots of intermod on VHF-high band. IFs
are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob
Parnass, AJ9S, in Monitoring Times, March 1998, for a review
which includes quantitative test results.

I did a little surgery on my 2045 last night, and this is where I hooked into...

If you look at the CTCSS tone board (or the connectors if you don't have the board)....You will see 3 pins on one side, 4 on the other...

```
o o o
^--------------I took the discriminator tap from here....
o o o o
^-------I took my ground from here.....
```

Using the standard data slicer that is available on the net, I have been running Trunker, ETrunk and MDT with no problems at all...

Hi Shannon,

The 2040 is a fast scanner. Thats about all I have to say `bout it that can be repeated in public.
I bought one when it first came out. I think it was a waste of money for what I spent on it. But for $80, maby I would have a different opinion of it.

The one thing I will warn you `bout is, Don`t hook it up to an outside antenna. The intermod is horrable. I get aircraft comming in on the police bands, & I don`t live close to an airport. I live in a small town with little radio traffic & STILL can`t use even the ant. that came with it. So it was stuck in a bedroom, without the ant. for use only when I hear the fire trucks go out at night.

The cheap plactic case lets in the strong freq`s. without the use of any antenna, so all I use it for is the police, rescue & fire.

Hats off to Radio Shack for lowering the price to $80. I hope they are starting to sell stuff for what it`s REALLY worth.

I am very interested in starting with a Ham Radio. I currently have a scanner which I have Skywarn frequencies (also Police/Fire mutal aid) and such. I was wondering how I would "starts out" into ham radioing. I'd have to get a ham radio (mostly for car, a base would be nice later on) and then I would have to get some kind of license? If you know any info (or a website) please help.

Thanks

It would probably be possible if you could find a scanner with a TON of
bandwidth, baout 5 MHZ I think depending on the system, I doubt a scanner like
that exists, although there are probably a few exceptions. TTYL

My Uniden 9000XLT does well in this area. I'm searching 138-150MHz, AM mode, 25kHz steps, right now, and there was only one intermod/image/birdie at 144.000 that I needed to lock out. Of course, my antennas are cut to specific bands, and that goes a long way toward eliminating intermod and images.

So by this interpretation a call placed through an autopatch on a ham radio repeater would be illegal to monitor.

154.5150 is a B (Business) Band frequency strictly simplex (line-of-sight) no repeater use. Here at Magic Mountain it is known as CH.01 Security. Frequencies above the Amateur Radio 2M band (150-173MHz) do not have offsets they are pretty much assigned at random.

Do yourself a favor; don't waste your time. Ham radio is dying. Unless your
idea of a good time is a bunch of old codgers exchanging boring World War II
stories and complaints about their health ailments, you won't enjoy it much.

I think that you are coming to conclusions with the little information you obtain.

You claim that the Sheriff's Dept. is online, eluding that they are using the RCS for their day-to-day operations. This is false.

You are correct that the Inland Fire (Zone 8) group has been using the system for a few months now, as well as Animal Control and Carlsbad City. Also, many otther agencies that you neglected to mention. I still fail to see how that translates to the Sheriff Dept.

Listening to public safety agencies via scanners is an excellent hobby. I have done so for many years. You may want to leave it at just that, though. A HOBBY. If you believe you are correct with the information you present, then just leave it be. It is very obvious your distaste for the RCS, from previous posts on this and other discussions on the subject.

But unless you involved in the RCS project directly, I again fail to see how your contacts with Sheriff "Officers" (as you call them), and others, makes you an expert in the matter.

And how do I know most of your information is incorrect? I DO work directly with the project.

Jeff

5780. Re: TV video from a scanner..

But you can already do that, by just hooking up a composite monitor to the av jacks on a vcr. Of course you have to have a TV antenna hooked to the VCR. Rigging up a scanner to re-invent the wheel is a bit redundant, don`t you think ?

5786. Who Is Warped & Causes Trouble ? - Proof !

Newsgroup: rec.radio.scanner
Date: 1998-09-12 00:00:00 UTC
From: "Mr. WireHead" <wirehead@pacbell.net>
Message-ID: <35FAF552.BE9C519C@pacbell.net>
Source record: 144156

John Mackey wrote:

> That means nothing coming from someone as warped as you who causes so
> much trouble!

R E A L I T Y C H E C K

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX.
We do not believe this to be a coincidence ....

The NFM on most scanners only receives about 6kHz bandwidth, however TV image modulation requires 6MHz bandwidth therefore it would be impossible to receive a TV image on your scanner. (without major modifications)

I don't believe that you will be able to receive SSB with the R390A as is.
The BFO is for CW and wasn't designed for SSB. There is a companion SSB
unit that takes the IF output of the 390 and allows for USB/LSB RX.
I don't remember the model number of the unit. I had a 390A and the SSB
unit, but sold them 2 years ago at a ham fest.

cheers

Rick

Source record: 144174

Start with the ARRL site at www.arrl.org they will give you the pointers
you need, what materials you need to study, and help you find a local ham
club in your area (which should offer classes and help).

The no-code license is available and extremely easy to get and will allow
you use of VHF, UHF and above frequencies.

Currently the Amateur radio licenses are as follows along with the morse
code requirements and technical/regulaiton knowledge requirements:

Novice 5wpm Morse code Simple regulation and technical questions
Technician no code simple technical and regulations
General 13wpm basic technical
Advanced 13wpm advanced technical
Extra 20 wpm a little more advanced technical

(wpm is Words Per Minute Morse code speed of understanding)

The technician license is the most popular as it is the easiest to obtain
(no morse code study, very little technical knowledge required) and will get
you "on the air".

Go for it and ignore the CBers cry -- ham radio isn't dead, just the minds
that want to kill it.

Cheers

Rick

Of course we know!

You use Motorola RSS software, with your computer hooked to a RIB via
the Comport. The Rib hooks to the radio by the pins on the side,
usually through a programming cup.

Do a search on BATLABS, and you will find much information there. I
don't have the URL on this computer.

Your screwed, you need a newer computer that has com ports rather then
serial ports!

hehe...serial ports are comports!..a trip into the bios of your
computer might even find you a way to make serial a into com4..
but it might not, but anyway serial a/b are probably com 1/2.
I have an old IBM marked that way and they can't be changed from 1 and
2 but that shouldn't matter much..

Unit is in excellent+ condition. Comes with 1 used battery
which seems to hold the charge just fine. Sorry I don't have the
charger (the charger is a simple coaxial type as available from Radio
Shack). Price inludes shipping COD (within cont. US).
I bought the BC3000XLT to upgrade from my BC2500XLT but found that I
am happier with the older model.

It is interesting though. Many states have some regulations governing the use of "radar detectors" but don't often post them (I have been through a few states where this is the case).

As for radar detectors being "burglar tools" thats taking things a bit far, don't you think?

That explains the low price with UHF air coverage! I wonder what
scanner out there would give good coverage in the 138-144AM band.
My PRO 2005/2006/60 all suffer from 900mhz pager interference in this
range, ironically my PRO34/37 which gets every image under the sun
blaze through there with no problems..to bad that it is in FM!

Right! That's what they normally consider a loss-leader. I can't believe that wouldn't already be accounted for in their prices. If I'm asked to pay for the 1999 catalog, I'll probably do so, but not without protest. I'll bitch and moan on the local repeaters and so forth. That's ridiculous.

Hey, I used to have one of those radios. Nice enough, ran it 'til it died, (the power switch got flaky). FORGET ANY 800MHz MODS. Just won't work. Can't tell you anything about the scan speed mod. Here's the scoop on the MONITOR button.

If you're scannng a range between two limits (like you're searching for unknown frequencies) and you hit something you want to get back to, just hit the MONITOR button, and it writes the frequency to one of ten "channels". Go past ten, and it overwrites Channel No. 1.

Hope this helps

Have Fun

I have started a new web site dedicated to Victorias Emergency
Services which will contain info on not just radio info but other
things also. Please have a look and let me know what you think about
it and any ideas for things you would like to see.

THIS SITE IS UNDER CONTRUCTION SO BE PATIENT!!!

There is also info on Victoria Polices' new F.L.I.R infra red camera.

Look at http://members.xoom.com/RadioComms/emerg.htm

>> appriciated.
>>
>>Shan
>

This is kind of confusing: COM port is for a communications port, or some kind of I/O port that allows for comms. Serial port refers to how the "bit" stream is delivered/sent: In a serial fashion, one bit after another. This is in contrast to a parallel port, where as the name implies, you have some number of bits being sent down the wire in parallel. If someone wanted to conduct the exercise, they could write an I/O driver that COMs over either type of I/O port...

So, your real issue is trying to figure out which COM port the software expects, and then logically (either via BIOS or the operating system of your choice) associate that COM port with the SERIAL port the OPC-478 is plugged into...If your computer is older, then the COM to SERIAL association is probably fixed by the BIOS; you'll have to make sure you plug your cable into the correct COM port in this case.

Well, Mackalooney, there is just no sense wasting any more time on the likes of you. You are a commensurate liar , forger, agitator and hypocrite. I have twit -filtered you, for the sake of the group. Don`t even bother to reply because I won`t see it. I believe that people on both of these groups can see you for what you are.
Your pathetic attempts to twist the facts are not being given any credence in these groups, because anyone that has a half a brain installed and functioning knows the truth. I should have trusted in the basic intelligence of my fellow scannists and radio enthusiasts to have seen the truth long ago. I , for one , will not bother to belabor the point further, nor will I waste further bandwidth on it.(or you)
I firmly believe that most people on here have twit - filtered you long ago anyway.....

>Listening to local public safety frequencies, and I hear telephone calls
>being broadcast over the same frequencies (vehicles have some kind of
>radio-telephone device; operates in simplex mode). Does this "phone" call
>fall into the realm of protection for normal (a.k.a. cell phones) telephone
>conversations?

According to the ECPA, any communication which begins or ends in a
wireline connection is protected. If the caller is calling his home
office, home, or anyplace where the phone is wired into the wall, then
it is protected. Probably by now, what with the additions to the ECPA
a couple of years ago, it is illegal to listen to ANY "telephone" call
no matter what the source or destination.

In this area there are apparently STILL some of those 150 MHz mobile
phones, because the guard tones are still there. You used to be able
to buy or build a device to plug into your scanner that would allow it
to bypass those tones. I don't know if the Sound Squelch will do it
or not.

Could some one please tell me where I can find the Technical manuals for a Collins R-390A/URR? I am new to Amateur Radio with a tech license, but use the radio to listen on HF. I can recieve AM and CW just fine, but I think the internal BFO pitch is off because I cannot get SSB. I have tried tuning in on the KHz knob while adjusting the pitch, but I still cannot get a clear voice at all. I am prepared to purchase a copy or authentic manual for the radio, but if someone could tell me where the internal adjustment is I would really appreciate it! Thanks.

Does anyone know if it's possible to hook a scanner in AM mode (or whatever mode video is sent in) on the video frequency of a TV channel to the video input of a TV or VCR? Is there some kind of interface, or does this work from the discriminator output? This would be pretty useful to view TV on say a camcorder or video-in monitor.

Neen,

The 2021 is an "allright" scanner for what it was designed for. By clipping a diode, you can make APPEAR to scan the 800mhz band. The fact is that the unit doesn`t have the front-end to recieve that band. No way, no-how. Period.

Now as far as speeding the 2021 up a bit, I asked Bill Cheek for help a couple of years ago. He had me change a value on a resistor near the CPU. I don`t remember what one it was, or the value, but it helped to speed it up by about 25%. It is still slow by my standards, but thats the best it gets.

I don`t know what mods. your looking for, but if you buy Bill Cheeks books, they have ALOT of mods. that can be made to work on your scanner. Contact CRB Books and spend a few bucks. You won`t regret it.

Uh....ya lost me loony. You're not confusing your delusions again are ya? I suppose it's kinda hard to keep track of your detractors. Maybe you should get a rolodex.

I was just commenting that the Deja News numbers kinda speak for themselves. But I believe it's Mr. Wirehead that's posting Smalley's and Kendrick's data. Not me.

But I still think it's a damn good post. And it looks like Mr. Wirehead's making good use of it.

Sleep tight. The world will go on hating you 'till morning.

> Does anyone know if it's possible to hook a scanner in AM mode (or
> whatever mode video is sent in) on the video frequency of a TV channel
> to the video input of a TV or VCR? Is there some kind of interface, or

A TV station is not like a radio station. With radio, the station is broadcasting what you're hearing. With TV, the station is not broadcasting the picture, but rather a set of instructions that allows your TV set to produce a picture. Given that, it's still 6 MHz wide! Working at a station once, I had a guy call me and tell me to adjust the vertical roll control. Each line is transmitted and the TV scans it, at a various rate, depending on where in the world you are. You can't take your TV to Europe and have it work, but you could take your radio to Europe and it would work (if you get the right voltage adapters). Also, TVs themselves do not always operate in sync, which is why whenever you see a picture of a control room, all the monitors look like they're rolling. They're really not, but the synchronization between them and the video camera is off just slightly. That would hold true for any video camera, unless it was synched up to the control room equipment. For a wierd thing to see, use a movie camera or unsynched video camera and look at a timer on a video machine. Sometimes, due to the number of frames per second, the timer will jump.

Although you can get a small TV with a radio built into it, video is a completely different animal from radio. The above stuff is just very generalized and could probably be explained a heck of a lot better, though.

Hey,

I got this program called PROCSAG Protocol Monitor from <http://aab.42.org/poc32/> or you can also get it from <http://www.inetone.net/Fsmith/index.html> It says it's suppost to decode most of the pager signals into text on your computer. It says you could either build a plug in or just use the Sound Blaster's LINE IN jack. My question is, can I just have a microphone connected to it and place the mic by the speaker? I'm using a ICOM W32A HT with it's Wide Recieve. If anyone actually gets it to work, please let me know how you got it to work.

Look, it's very easy to protect yourself. Just like all the windows in your house with aluminum foil. Be sure to put the shiny side out. When you want to go outside wear a football helmet lined with foil. For extra protection attach a lightweight chain to your helmet and let the loose end drag the ground. This will "ground" your helmet and allow all the radiation to bypass you completely.

Just curious, since you have both - if you set them side by side, which detects signals from a greater distance? Have you noticed which is more prone to getting flooded out by FM broadcast stations?

I have used lots of older type receivers for SSB and most of them work reasonably well if you use the CW position, which turns the BFO on. Then the audio gain should be turned up, ususlly all the way and the RF gain control used to control the volume. That way the SSB signal does not over power the VFO signal. The VFO is replacing the carrier so that the detector demodulates the signal like it was AM. The VFO needs to be set to one side of the passband or the other. Which side depends on if you are on USB or LSB. For USB the BFO should be placed on the lower edge of the passband.
In addition you need to use a selecetivy position that is 2.1 or greater.
Tuning the SSB signal after doing the above should be done slowly but can be done and you will get better with practice.
I hope this helps.

5889. Re: Canadian Scanners

If it is sold at Radio Shack here in Canada and has 800mhz
capability it is blocked. If you want unblocked here you have to go
to someplace like Durham Radio or Atlantic Ham Radio, both are here on
the web.

It is time to stand up and be counted for your friend and mine, Bill Cheek. You can help by drafting a message to the following e-mail address, and tell them you want Bill back on the news group and you would like his account reinstated. Bill has done so much and worked so hard for us all, that I feel we owe it to him. Send your request to the following address:

ekruse@san.rr.com

and help us to save an important radio resource, before it is gone.

I know I'm beating a dead thread with a stick but all of you folks are missing some important points-

1. If you are serious about using a computer controlled scanning system for researching the spectrum you need:

A. SPEED. The PCR-1000 is very limited due to it's slow connection to the radio via a port. Doesn't matter a bit if you are running a 400 Mhz PCI bus pentium, you are still communicating with the unit via a slow port. How fast does the PCR-1000 search and scan? I get better speed with Probe and my 2006/OS456, about the same as the winradio 1000.

B. SENSITIVITY. I've heard the PCR-1000 is better, but not not by much. Seems it performs better on HF that the winradio. The Winradios are reported to have the edge on VHF/UHF. One poster compares the PCR-1000's sensitivity to the AR-8000. The AR-8000 I tried out wasn't very sensitive. If you want to see a sensitive radio try a Yupiteru 7100 or a R/S PRO-2045.

C. SELECTIVITY / Resistance to Intermod. Folks, I live in Chicago, if I don't use a tight radio all I'll be logging is pager noise. I suspect the the new Optocom will leave both these units in the dust in this regards, given it's GRE front end.

2. Software support. ICOM has refused to release the protocols for the PCR-1000. Not exactly "community friendly". Between Winradio, Bill Cheek (egads I mentioned his name, 50 lashes with coax for me!), and other developers, I suspect there are more programs out there for running and adding features to the Winradio than the PCR-1000, sorry Rich. In this regards, guess what? My 2006 / 456 wins again! Actually, you don't want a lot of software, you want GOOD software. The ICOM software, what I've seen of it, sucks. The Winradio's supplied software is much better. Probe or Scanstar for the opto systems are better than either.

3. ACCURACY - Doesnt matter how efficiiently you are logging information if the information is wrong. How well do these units record logged information, like digital PL tones? Very tricky timing here. My 2006 / 456 beats the 2042 / 556 system in this regard. I hate going through a log of PL tone hits and getting bad data.

4. Neither of these units, to my knowledge, directly support trunking, either fleet mapping / talk group tracking, or even the ability to collect this data. The Optocom will.

5. Having said that, the Optocom will ship with Scanstar for Windows software. This program uses drivers that load into windows and may create instability on some systems. I had a terrible time with the Scanstar Deluxe for Windows demo I downloaded from their web site. Crashed my AOL browser and HP printer drivers

on a regular basis. Got so bad I had to do an un-install to keep the wife (and me!) happy. (No PCI pentium here, 486 DX2 66 Mhz running Win 3.1, no less).

6. A company like ICOM, having to ship out bug fixes for their software, not so good. Bad beta testing. Pretty shocking. I've never had a single crash with any DOS version of Scanstar and only one with Probe, though that one was fatal to a huge datafile, yucky. If you lose data with probe, and you are a registered user, the kind folks there will attempt to rebuild your data for you if you send it to them. Will ICOM or winradio do that? Now that's what I call software support, not sending out bug fixes, geeez.

7. Quality of the case? How hot it gets? I guess if all you are doing with it is staring at it with your coffee cup resting on it, that's important.

8. As one poster pointed out, the guy who started this thread was asking about the Winradio 3100e. It's not really in the same class as the Winradio 1000 / 1500 / PCR-1000. I have seen zero reviews of the 3100e. But I understand that more than one government agency is pretty happy with their rackfull of these puppies. We are comparing apples and oranges, I'm afraid. The Optocom still looks hot in this regard. The Master / Slave and multi radio configuration aspects of Scanstar and the 2006/456 begins to approach this level of utility. Does the PCR-1000 or the WIN-1000/1500 support multiple radios? Master / Slave tuning? It's a feature not many people use, but it's pretty cool. Can I freely combine scanning and searching with the PCR-1000? I think you can with the Winradios, but again, it's primarily a software dependent feature.

9. How do these units do with PL recieve? I love the way my 2006 / 456 handles it, though it IS software dependent. Scanstar and Probe both offer true PL recieve. If you are scanning channels programmed with a PL tone does the radio momentarily un-squelch and or slow down a great deal when encountering a signal with a different or no PL Tone? Can you import pl tones into a data file? Or do you have to manually enter them?

10. Digital Signal Processing will be a very important feature in the future, maybe the most important, especially w/regard to digtal signal processing and data decoding. I think one would want this ability in some form. The PCR-1000 offers a board as an option. Correct me if I'm wrong, but I think the Winradios have it built in (all of them?). Not much available right now in terms of execution of the capability, at least apart from Amateur Radio protocols, but I think I'd want some ability to use DSP with whatever system I bought. There will be a lot of DSP stuff out there in the future. DSP is good not only for Audio processing, but could be used for many other things, too. Personally, I'm not too "up" on DSP. Don't know about the Optocom and DSP. Am I correct in thinking that one could always add this in at a later date, either through aftermarket black box devices or good software?

-I'll shut up now - Happy Scanning - Ted

best you cry
another day
maybe bill
no more to say

get it

maybe the man has just
had it up to "here" with
the way it is and let it
go ...

consider not what you want
think more of the
reasons Bill has
not seen fit to go
into the NG from
the other doors
available to him.

bill wins by his silence.

as far as selling his "stuff"...well,
he'll do ok.

by his silence he draw the great
mackeral stink out even more....

look at what the stink has brought
to fore. Had bill not been out
these little "insights into this
cretin of runt-end birth-scream
not known as he is now....

bill conduit
etc.

You forgot the Tech plus class, which is a tech with the 5wpm certificate.

So if the possible Tech candidate can also pass the 5WPM test they can get
some more privileges. CW on 40,80 and 15 meters and CW/phone on 10 meters.

Tom
